*Including commuted value of installments or other benefits not payable at time of death or maturity of endowments, such commuted value being entered also under Nos. 1 or 2 of disbursements.

‡Including commuted value of supplementary contracts, see No. 21 of income.

†Unless otherwise specified in the policy contract, the cash surplus apportioned to any policy as a dividend is automatically applied on the date of allotment, *i. e.*, on the policy anniversary, to the purchase of additional insurance, and this additional insurance is paid by the company as a death claim if the insured dies even on the date of allotment. Such dividend additions can be surrendered for the original cash surplus, or the cash surplus can be applied towards the payment of premiums on the policy. In those cases where the surplus for the year 1913 has been drawn in cash in the year 1913, or used to pay a premium in the year 1913, the surplus has been considered as a cash dividend for the purposes of this annual statement.

LEDGER ASSETS.

Book value of real estate-----	\$23,548,626 96

REPORT
of the
Reclamation Board
of California

1914

CALIFORNIA
STATE PRINTING OFFICE
1914

Report of the Reclamation Board of California.

To His Excellency, HIRAM W. JOHNSON,

Governor of California.

There is submitted herewith, for your consideration, a report of the work of the State Reclamation Board to April 1, 1914.

The first report of the Board was made in December, 1912. Since that time there have been important changes in the powers and duties of the Board, and in its organization, made by the act of 1913, chapter 170; there has been material modification of the plans for financing the flood control project for the Sacramento and San Joaquin rivers, the carrying out of which project is the chief concern of the Board; congress, through passage of the rivers and harbors bill of this session, already reported by the Rivers and Harbors Committee, will formally approve the project and commit the Government to the expenditure of \$5,800,000 as its share of the cost thereof, and the field work and construction, being done partly by the California Débris Commission for the Federal Government and partly by the Reclamation Board, or by landowners and reclamation districts under its approval, are progressing favorably and rapidly.

The Sacramento River project was one of the few projects classed as new and calling for a large expenditure of money by congress which received the full endorsement of the Rivers and Harbors Committee of the sixty-third congress. The committee report, presented on February 24, 1914, speaks as follows of the project, conveying thereby an unusual compliment to the thoroughness of the plans and to the manner of their presentation before the committee:

“The project for the improvement of the Sacramento and Feather rivers is also one which the committee regarded as worthy and of great importance. The whole work is to cost something above \$33,000,000, but as a greater part of the work is for the purpose of preventing overflows from floods, and of protecting and reclaiming lands in the valley of the Sacramento and Feather rivers, the State of California and local interests are to contribute all money necessary for the work except \$5,800,000, which is recommended by the engineers as the amount the Government should expend in the interest of navigation. The plans and the report indicate that the project has received the most thorough consideration that engineering skill could bring to bear, and that nothing has been left indefinite that it was possible to make certain.”

It may be said now for the first time, because of the conjunction of the elements before mentioned, that the success of the flood control project is positively assured, the date of its completion being dependent

only on the rapidity with which State and Nation will make the necessary appropriations for weirs and work in the river channel, and on the amount of cooperation secured from landowners in the construction of by-passes and river levees.

The latter feature, construction of by-passes and river levees, which include the most expensive elements of the project, can easily be completed in three or four years. Only litigation or obstacles created by property owners can extend that time longer (and it is doubtful if even these could delay it much), if the State Reclamation Board sees fit to exercise its authority to order the work done and to levy assessments for the cost thereof. So far as the project itself is concerned, no benefit will result from completion of this portion of the work in advance of the opening of the river's mouth.

Within that same period the four weirs—the Fremont, Sacramento, Tisdale, and Moulton—can easily be finished, as well as the greater part of the work necessary in opening the mouth of the Sacramento River. This necessitates, however, large annual appropriations, say \$750,000 or more each, from both congress and the legislature; and as both are committed to the project, and as delay in completing it means constant danger to the two valleys, there is no apparent reason why such appropriations should not be made.

FLOOD CONTROL IN THE SAN JOAQUIN.

The law contemplates the carrying out of projects which will control floods in both the Sacramento and the San Joaquin valleys, and the jurisdiction of the Board under the act of 1913 has been made broad enough for that purpose. The only comprehensive flood control project so far outlined, however, is for the care of the floods of the Sacramento River, which threaten incidentally the navigation of the lower San Joaquin and the property in the delta of that river. Plans for care of the floods of the San Joaquin must await completion of the necessary surveys and preparation of data.

Surveys are now being made by the U. S. Geological Survey, acting in conjunction with the State of California in mapping the topography of the San Joaquin Valley. A survey by the California Débris Commission for navigation studies is being made under a joint appropriation from State and Nation of \$65,000. Through a mutual understanding between the departments these surveys will be coordinated so as to obtain information for both navigation investigations and flood control studies with the least expenditure of time and money. These surveys may not be completed for a year, and it will perhaps be two years before the engineers will be prepared to submit comprehensive plans for flood control of the San Joaquin River and its tributaries.

In the mean while the Board's work in that valley is restricted to so directing reclamation that it will offer least obstacle to probable flood

control plans. It is generally assumed, however, that storage reservoirs will prove more efficient agencies in solving the flood problems of the San Joaquin and its tributaries than they can be in the case of the Sacramento River, because of the difference in physical conditions.

SACRAMENTO PROJECT—PHYSICAL FEATURES.

The purpose of the project for care of the Sacramento River floods was fully explained in the previous report of the Board. It has since been declared by the Board of Engineers for Rivers and Harbors (House Document No. 5, 63d Congress, 1st Session), to be the only plan economically practicable, which will restore and maintain the navigability of the Sacramento and Feather rivers and the lower stretches of the San Joaquin, and preserve the lands of the valleys adjacent from destructive floods. It aims to confine to the river channel as much of the flood waters as that channel can safely carry and to pass the excess over weirs and through by-passes in the adjoining basins, to be turned into the river again at Rio Vista. From this point to Collinsville, at the mouth of the river, the channel is to be widened to 3,000 feet and given a depth of 35 feet, so that extreme floods will quickly run off into the bay.

The main engineering features of the plan, as explained in the Débris Commission Report of 1910 (House Document No. 81, 62d Congress, 1st Session), have not been changed. There have been made already, however, some modifications in the by-passes and overflow channels, on recommendation of the California Débris Commission and the State Engineer and the Flood Control Engineer, necessitated by conditions as developed by late surveys and investigations; and doubtless more of such minor changes will be made.

The Yolo by-pass, for instance, has been moved to the west from 1,500 to 5,000 feet, the change being required by the fact that private reclamation had encroached on the lines of the by-pass before creation of power in this Board to prevent it, and it was clearly more economical to accept the new east line for the by-pass thus created than to condemn lands already reclaimed and build a new levee along the original line. This change was foreshadowed in the previous report of the Board.

In the Sutter basin the by-pass has been moved from the original central location to a more easterly one, effecting a junction with the Feather River overflow channel below Nelson's Bend. While the elevation of the flood plane will be higher in some places than it would have been in the central location, the new location sacrifices less valuable land, and gives a better gradient, the average height of the levees and depth of water in the by-pass being less, and the length of levees required will be nine miles less than that required for the central location.

The American River overflow channel has been widened from 1,500 feet, as recommended in the original report, to 2,400 feet, because of the discovery of data indicating that the American River carried in the 1861-1862 flood 180,000 second feet, instead of 120,000, as previously estimated. For the same reason, the Sacramento weir and by-pass will have to be widened from 1,600 to 1,800 or 2,000 feet.

The entire lines for the by-pass in the Sutter basin have been formally adopted. In the Yolo basin the east line has been approved, while action on the west line has been deferred pending a solution of problems created by the floods of Cache Creek. In the Butte basin the lines have not been yet fixed, because, while the surveys have been completed, the necessary data have not yet been worked up. Lines of the Feather River overflow channel also await study of conditions there.

FINANCING THE PROJECT.

The plan of financing the project has been materially altered. The 1910 report of the California Débris Commission estimated that the entire expense of the project would be \$33,000,000, and recommended that the Federal Government should pay one third and the State two thirds, it being understood that the State would assess one half of its share to the lands benefited.

The present plan recommended in the California Débris Commission report of February, 1913 (House Document No. 5, 63d Congress, 1st Session), furnished the basis for the state act of that year, and will be formally adopted by congress on passage of the present rivers and harbors bill. It provides that the nation will only pay one half of such expense, aside from rights of way, as is necessitated under the plan in opening the mouth of the Sacramento River, in dredging and rectifying the river channel and in constructing weirs, and that the State shall pay the other half of such expense. It is estimated that each will pay, under this plan, \$5,800,000, or about one half the amount apportioned to each by the original plan. This portion of the work is to be under exclusive direction of the United States Government, acting through the United States Army Engineers composing the California Débris Commission.

All other elements of the project, including purchase of rights of way and clearing by-passes and overflow channels and construction of river and by-pass levees, are to be done at the expense of the landowners who may be benefited thereby, and under supervision of the Reclamation Board. In these matters, however, the Board acts with the advice of the California Débris Commission, as well as of the State Engineer and the Flood Control Engineer. The latter and the Secretary of the California Débris Commission attend the meetings of the Board and take part in all its deliberations. Under the original estimates in the Débris Commission report of 1910 these elements totaled about

\$22,000,000. That amount will probably be exceeded, because of the more expensive type of levee being adopted, and because of the probable necessity for generally revetting the levees.

PROJECT APPROPRIATIONS.

The California Débris Commission, in a supplemental report of January 23, 1914, recommended an appropriation from congress for the Sacramento flood control project of \$1,000,000 for the first year and of \$500,000 each year thereafter, conditional on the State of California appropriating similar amounts.

The rivers and harbors bill of 1914, however, while it endorsed the entire project and committed the Government to paying its full share thereof (\$5,800,000), appropriated only \$200,000 to meet a like appropriation made by the legislature of 1913. This amount will maintain the operation of the two government dredgers now working at the mouth of the Sacramento River, between Cache Slough and Collinsville, up to the summer of 1915, and will afford a balance that may be devoted to other parts of the project. To remove the necessary amount of material in widening and deepening this sixteen-mile stretch of the channel in accordance with the plans would take these two dredgers nearly twenty years, unless material assistance is received from current action.

The opening of the river's mouth calls for the major part of the expense to be met by State and Nation, perhaps \$8,000,000 or \$9,000,000 of the \$11,600,000, the balance being mainly for construction of weirs. To hasten this river work and to secure the construction of the four weirs over which the waters will flow into the by-passes, calls for large appropriations by congress and the legislature at the coming session of each, and of similar appropriations each session thereafter. The Government work in these two features is essential to the operation of the by-pass system. It will be of little avail to complete the by-passes and river levees under authority of the Reclamation Board unless there is safe discharge for flood waters from the river into the by-passes and free run-off at the mouth of the river. In face of the grave necessity, and in view of the fact that both State and Nation are pledged by enactment (or will be so pledged by the time this report is published) to carry out the project, it is hoped that adequate appropriations may be secured so that there will be no delay in the work.

SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT.

The act of 1913, chapter 170, creates the Sacramento and San Joaquin Drainage District, and includes in it, in addition to the Sacramento Valley territory placed under the Board's jurisdiction by the act of 1911, some half million acres in the San Joaquin Valley. The district comprises 1,726,553 acres, all under the flood plane of the two rivers,

and extending through fourteen counties, from Chico to Fresno. The city of Stockton and its environment were excluded on request, and the section from Firebaughs Ferry to and beyond Tulare Lake, because no opportunity offered of securing a consensus of opinion of the land-owners there. All the territory named should be included in the district, and there have been indications that requests to be so included may be made to the next legislature by the parties interested. Of this district the Reclamation Board is, in effect, a board of trustees with powers somewhat similar to, but broader than, those given trustees of reclamation districts. While it may not assess lands outside the district, it is given jurisdiction over reclamation works outside the district, if they be located on tributaries of either the Sacramento or San Joaquin rivers, or subject to overflow therefrom.

The following table indicates the acreage within each of the fourteen counties included within the boundaries of the present district:

Approximate Acreage in Drainage District.

County	Acres	County	Acres
Butte -----	121,677	San Joaquin -----	256,960
Glenn -----	69,760	Contra Costa -----	50,240
Colusa -----	178,880	Stanislaus -----	36,956
Yuba -----	57,600	Merced -----	202,880
Sutter -----	222,080	Madera -----	55,040
Yolo -----	173,280	Fresno -----	67,040
Sacramento -----	178,640		
Solano -----	55,520	Total -----	1,726,553

POWERS AND DUTIES OF THE BOARD.

The original act gave the Board authority only to prevent new reclamation work which would interfere with the flood control project. The act of 1913 places at the disposal of the Board machinery by means of which it can assist, and, if necessary, force the completion of all that portion of the flood control project for which the landowners must pay, and can levy assessments to pay therefor on lands benefited in proportion to benefits received. Under exercise of this power, the by-pass and levee system can readily be completed within the three or four years mentioned earlier in this report, though it may not be wise to do some of this work in advance of the Government work at the river's mouth. The date for completion of the entire project therefore depends upon the rapidity with which State and Nation will make appropriations for weir construction and channel work.

In regard to both original construction called for by the flood control project, and repair and maintenance necessary for protection of lands, the Board may order the work done by the interested parties, and if they fail, may itself let the contracts; or interested parties may do the work under the Board's approval and be reimbursed therefor when the

necessary assessment has been levied and collected. At present, and until the Board is prepared to levy assessments, the latter plan is being followed, where possible, because it avoids delay.

The act provides that out of the first assessment there must be returned to the state treasury \$50,000 of the \$100,000 appropriated by the act for general expenses of the Board; and as such assessment must naturally be levied upon the whole district of 1,726,553 acres, assessment for any particular part of the project can not be made in advance of the preparation of the complete property roll for the district. Work on this roll is rapidly progressing in the fourteen counties, and on its completion assessors will proceed to apportion the estimated cost of separate units of the project to the lands benefited thereby, and to levy the necessary assessments on these lands in proportion to benefits received.

The value and necessity for the maintenance of a State authority with power to shape reclamation and reclamation works in the interests of the flood control projects, as formulated and adopted, has been well exemplified during the last two years. But for the authority exercised by the Reclamation Board, private reclamation during that period, if done along individual and independent lines, as was previously the case, would have very seriously encroached upon the by-pass and overflow channel system.

While additional danger and expense would thereby be created indirectly for all districts, immediate injury and loss would be occasioned to a district itself and to its innocent neighbors, by carrying out plans which aimed only at leveeing the district's lands, regardless of conditions and dangers. A striking instance of this is presented in the experience of District No. 784, located on the east side of the Feather River below Marysville and lying between that river and the Bear. This district adopted its plans and carried them largely to completion before broad authority over all levee systems was conferred upon the Reclamation Board. The Board, however, called attention of the district's trustees to the fact that its levees along the Feather River encroached upon the overflow channel contemplated in the California Débris Commission report, approaching at several points to within 600 or 700 feet of the levees of District No. 1, on the opposite side of the river, and that the inevitable result in time of flood would be a choke at these points, with destruction of some levees and injury to property. In the first freshet following completion of this levee (January, 1914) the Feather River at Los Plumas (the Western Power Company's power house) rose no higher than 13 feet below high-water mark, and the Yuba River at Alabama Bar, near Clipper Mills, was 5 feet 4 inches below high-water mark, thus indicating about two thirds or less of maximum flood water. At Marysville the highest point reached was 2 feet 6 inches below high-water mark, while about five miles below Marysville, where

occurs the first choke due to improper contraction of the channel, and at two other points of contraction along the levee of District No. 784, the water was 18 inches higher than ever known before. As a result, the levees of District No. 784 went out at two of the points of choke, and the current washed away wooded points of land. If the levees of District No. 784 had stood, the levees of District No. 1 would undoubtedly have gone out. The Reclamation Board has now declined to approve the reconstruction of this levee on the old line. There will be a loss perhaps of \$200,000 occasioned by this example of reclamation along the old independent lines, but the powers of the Board make it possible to prevent similar loss and danger in the future.

RIVER AND BY-PASS LEVEE CONSTRUCTION.

The construction of by-pass and river levees, necessary parts of the flood control project, has been materially advanced by the activity in private reclamation, the desire to speedily enclose lands for cultivation, and the fact that in many instances such levees served also the purpose of district reclamation levees. Prior to the passage of the act of 1913, chapter 170, such levee construction, even when partly for the general good, had to be borne entirely by the private interests whose boundary defense it marked. Further incentive to activity in private work of this kind was furnished by the act in its provision for reimbursement for moneys expended on portions of the project under approval of the Reclamation Board, through assessments to be levied thereafter on lands benefited. Much of the work now in progress and planned will be ultimately paid for in this way, and the burden will be properly distributed and borne by those benefited in proportion to benefits received.

As to the work to be paid for by landowners and done under supervision of the Reclamation Board, including all by-pass and river levee construction and securing of rights of way, the conditions are as follows:

BY-PASS LEVEES.

In Yolo basin there has been already constructed of the east levee of the by-pass 20.75 miles in existing levees of Reclamation Districts Nos. 827, 785, 900, 501; of the remaining portion of this east levee, 13.45 miles are included in the west levee of the Netherlands District No. 999 and 6.2 miles in the west levee of the Mull District No. 1600. Plans for these levees have already been approved by the Board. District No. 1600 is ready to commence work at once, and expects to complete its levee during 1915.

In the Sutter basin a stretch of 7.3 miles of the east levee of the by-pass, from Nelson's Bend to the mouth of the Feather River, is finished, being part of the west levee of the Natomas District No. 1001. The plans of District No. 1500 call for the completion of 20.16 miles of the west levee of the main Sutter by-pass from the latitude of Tisdale

weir to the mouth of the Feather, and of the entire south levee of the Tisdale by-pass, 4.2 miles. The district has now 13 dredgers at work, is building three more, and plans completing these levees some time in 1915. North of District No. 1500 and east of District No. 70 lie about 13,000 acres whose northern and eastern boundary would be the west levee of the main by-pass. The owners of this property are now attempting to organize a district; and the movement, if successful, will provide for the construction of the balance of the west levee of the main by-pass, 9.48 miles, and of the entire length of the north levee of the Tisdale subsidiary by-pass, 4.25 miles.

There would then remain to be constructed the west levee of the Yolo by-pass and the east levee of the Sutter by-pass, together making, say 62 miles, and all of the Butte by-pass levees, say 24 miles. If nothing towards construction of these units is done by interested land-owners or reclamation districts, the Reclamation Board, under its powers, could commence work thereon in 1915 and push it steadily to completion.

THE SACRAMENTO BY-PASS.

The Sacramento by-pass, situated a few miles above Sacramento City, and intended to carry the excess floods of the Sacramento and American rivers to the main Yolo by-pass, a distance of 1.8 miles, is of more immediate importance than any other by-pass construction. This is because the American River has carried in extreme flood as much as 180,000 second feet, while the Sacramento below the mouth of the Feather may have to carry, under the completed plan, as high as 107,000 second feet. The Sacramento River below the mouth of the American has a maximum channel capacity of 110,000 second feet, and there may be, therefore, in any season, flood waters at this point of 177,000 second feet in excess of what the river channel can carry. Such a contingency, coming in advance of the opening of the Sacramento by-pass, means certain disaster for some one or more districts in the vicinity of Sacramento City and below it. Only the complete inundation of some can then save the others.

The gravity of this situation impelled the city of Sacramento last year to vote \$594,000 in bonds for the construction of this by-pass, and she has already purchased most of the necessary right of way, and has prepared plans for construction of the retaining levees. Money expended by her for these two purposes can be returned under the law from an assessment to be levied by the Reclamation Board on the property benefited. The construction of the weir itself, being a part of the project to be paid for by California and the United States jointly, may not be assessed to the land. Congress has failed this year to appropriate sufficient funds for building this weir, and the city of Sacramento, following the suggestion of this Board, has agreed to expend a portion of

its bond issue in such weir construction, while the Board will provide by assessment on the lands for the rights of way and retaining levees, 3.6 miles long.

RIVER LEVEES.

Of the river levees necessarily a part of the flood control project of the Sacramento River, there are 503.85 miles, distributed as shown in the following table of river and by-pass levees:

LEVEES OF THE SACRAMENTO VALLEY FLOOD CONTROL SYSTEM.

River Levees.

Sacramento River.

THE KNIGHTS LANDING RIDGE CUT.

The Knights Landing Ridge cut is a canal projected through Knights Landing Ridge, intended to drain the waters of Colusa basin direct into the main Yolo by-pass. These waters at present pass out into the Sacramento River at or above Knights Landing, and ultimately find their way into the Yolo or other basins through break or overflow. With other basins closed and the Yolo basin open at the head of the Yolo by-pass, as will be the case next season and thereafter, these waters from the Colusa basin will work back into the Yolo basin after having done more or less damage along the Sacramento River above the mouth of the Feather.

The Knights Landing Ridge Drainage District, organized under special act of the legislature of 1913, and with plans approved by this Board, is now prepared to commence the work of cutting this canal. It should be finished, under the estimates, in the summer of 1915.

PRESENT ORGANIZATION OF THE BOARD.

As originally organized, under the act of December, 1911, the Reclamation Board consisted of three members, who were not allowed salary or clerical assistance, and who paid their own traveling and contingent expenses, including even stationery and minute book. The Board's powers were limited, being confined in effect to passing upon reclamation plans with the purpose of preventing construction which would interfere with the flood control project.

The act of 1913 went into effect August 11th of that year, and on August 19th the Board reorganized with an enlarged membership, consisting of the incumbents—Peter Cook of Rio Vista, W. T. Ellis of Marysville, and V. S. McClatchy of Sacramento—and four new members—A. G. Folger of Sacramento, G. A. Atherton and L. H. Frankenhimer of Stockton, and M. C. Zumwalt of Tulare. V. S. McClatchy

was elected president, A. G. Folger, vice-president, and W. T. Ellis, secretary. The office force was placed under direction of W. H. Hogue, executive secretary, and the field and draughting-room force under E. A. Bailey, flood control engineer, who is an assistant to the State Engineer.

Application made for office quarters in the Capitol was refused because of lack of space, and offices were established in the Nicolaus Building, on Eighth street. The work of the Board has necessitated a large force with the certainty that in departments apart from field engineering it must be increased, rather than diminished, in the near future.

The responsibilities placed upon the Board were of such nature, the questions arising thereunder so important and frequently new, that it was clearly necessary, in the interests of the flood control project and to avoid serious legal complications, to have almost daily legal advice. It was hoped that one of the assistants of the Attorney General might be detailed for such duty, but after conference with your Excellency and with the Attorney General it was found that the duties would be too exacting to permit of such an arrangement. Under authority of the act, and with the approval of the Attorney General, the Board appointed C. H. Oatman to act as its attorney. He took up his residence in Sacramento on receiving the appointment, has offices in the same building as the Board, and is daily in touch with its executive officers. The demands made upon him by the Board's business thus far have fully justified the appointment.

Much of the time of the Board is taken up in hearing applications for approval of the reclamation plans of private districts and protests in opposition thereto, and in harmonizing the views and interests of landowners, so that cooperation in the interests of the project may be secured. It has been necessary to hold meetings much more frequently and of longer duration than originally contemplated, and still more time will be occupied when the Board takes up the matter of assessments for individual units of the project and the holding of hearings in connection therewith in fourteen counties. The executive work of the Board requires much time and attention and the matters involved are so important that it may be found desirable or necessary, if the present plan of an unsalaried Board be maintained, to provide for salaried executives.

THE ENGINEERING DEPARTMENT.

The engineering department of the Reclamation Board is at present technically an adjunct of the State Engineering Department, the flood control engineer in charge of the department being an assistant to the

State Engineer, appointed by that official. In practice, however, and under friendly understanding with the State Engineer, the flood control engineer and his assistants in field and draughting room are a part of the Reclamation Board organization, occupying space in its quarters, attending exclusively to flood control work and paid entirely out of the Reclamation Board's appropriation.

This force, since the reorganization of the Board under the act of 1913, in August of that year, and until April 1, 1914, has comprised from three to eight in the draughting room, and from ten to fifteen in the field party. The field force was discharged April 1st, its work for the present being finished, while the draughting room will be maintained for some time with the same force, to work up data, prepare maps to accompany assessment rolls, etc.

The field crews have completed all necessary surveys of the Yolo, Sutter and Butte basins. In the latter two basins the crews had to make complete surveys, while in the Yolo basin material assistance was had by access to surveys made and data possessed by the California Débris Commission and private reclamation districts.

The draughting-room force has mapped all the basins, and the major by-passes of the Sacramento River project, estimated flood planes and by-pass and channel capacities, and completed profiles and cross sections of all river levees not already brought up to grade or not being surveyed by private districts in the following territory: both sides of the Yuba River; the north side of the Bear; all the Feather River; and all of the Sacramento River above Colusa. There is now in the office the necessary data for making detailed plans for the construction of any levee, weir or by-pass called for by the Sacramento River project.

In securing and preparing this data and in expense incidental thereto there has been already expended \$31,320, of which \$17,375 was paid out of the \$100,000 appropriation made for the Board by the act of 1913, and \$10,000 was expended prior to August, 1913, by the State Engineering Department, such amount having been appropriated for the purpose by the act of December, 1911. There was used in addition \$1800 subscribed by the Sutter Basin Improvement Company, so that necessary surveys of the Sutter by-pass might be made in advance of the date when the appropriation would be available. In this way delay in the work of District 1500 was avoided.

In order that the office work necessary for the approval of the plans of reclamation of various districts might be carried on, the pay rolls and expenses necessary for this work from January, 1913, when the \$10,000 appropriation of 1911 was exhausted, until August 11, 1913,

when the funds from the present appropriation became available, were paid by the following contributions:

Haviland, Dozier & Tibbetts-----	\$1,308 90
Sutter Basin Company-----	568 64
Mull District (No. 1600)-----	223 03
City of Sacramento -----	44 80
Total -----	<u>\$2,145 37</u>

EXPENDITURES BY THE BOARD.

The act of 1913 appropriated \$100,000 for the use of the Board in carrying out its provisions, of which amount \$50,000 is to be returned to the state treasury out of the first assessment levied on the Sacramento and San Joaquin Drainage District, created by the act. That appropriation of \$100,000 will barely suffice, even with the elimination of certain features ultimately necessary, to carry out the work of the Board up to January, 1915. By that time it hopes to be able to levy assessments for the expenses to be incurred in construction and other work incidental to carrying out specific portions of the flood control project, as well as to meet current expenses of the Board.

It is not clear whether it was intended that the administrative and other general expenses of the Board should, as a permanent thing, be met by assessments on the Sacramento and San Joaquin Drainage District, or provided for by legislative appropriation. So great are the financial and other benefits which will accrue to the State from the practical creation, under the flood control project, of a rich territory of one and three quarter million acres which can then be devoted to intensive cultivation of valuable crops and the supporting of a very large population—not possible under existing conditions—that California could well afford, it would seem, to meet the necessary expenses of this Board, while the lands benefited pay for engineering and construction work and all rights of way. The act permits assessment of the lands for general expenses of the Board, and it will provide in its first assessment a fund for this purpose for 1915. To secure funds each year in this way, however, for this purpose alone would be burdensome and very expensive. The cost of levying the assessment might in cases approximate closely the amount needed for the Board's regular work.

The Board has expended since August 10, 1913, up to April 1, 1914, \$30,075 of its appropriation, in the manner indicated in the following statement:

Statement of Expenditures From the Appropriation Made for the Use of the State Reclamation Board.

(Chapter 170, Statutes 1913.)

Between the Dates August 10, 1913, and April 1, 1914.

Amount of appropriation-----		\$100,000 00
Expenditures (Reclamation Board)-----	\$8,775 00	
(a) Salaries of office force-----	\$900 00	
(b) Salary of attorney-----	2,500 00	
(c) Per diem of members-----	2,900 00	
(d) Expenses of members-----	600 00	
(e) Office equipment -----	825 00	
(f) Office expenses -----	1,050 00	
Expenditures (State Department of Engineering) -----	17,375 00	
(a) Salaries of office force (draughting room) -----	\$3,575 00	
(b) Salary of Flood Control Engineer-----	1,500 00	
(c) Salaries of field parties-----	5,500 00	
(d) Expenses of field parties-----	4,900 00	
(e) Office equipment -----	100 00	
(f) Field equipment (including auto and lunch) -----	1,200 00	
(g) Office expenses -----	600 00	
Expenditures (assessment data)-----	3,925 00	
(a) Printing -----	\$150 00	
(b) Salaries -----	2,425 00	
(c) Expense accounts -----	150 00	
(d) Maps and blue-prints-----	300 00	
(e) Searching of records-----	900 00	
Total expenditures -----		30,075 00
Balance in appropriation-----		\$69,925 00

To properly proceed with the work of the Board up to January 1, 1915, it is estimated that \$67,000 would be necessary as indicated below, leaving then in the fund something over \$2,000. This assumes that there will be no engineering force in the field during that period, save for specific purposes indicated, the field force having been discharged April 1, 1914.

These estimates indicate that the present appropriation will not allow the carrying out of all the work outlined until after additional revenues have been received, either from assessments levied under the act, or from legislative appropriations. There will be barely sufficient funds to pay for those things actually necessary in continuing the organization of the Board and levying the assessments called for by the act and necessary to insure the progress of the project, even if it be assumed that collection of the first general assessment can be made within ninety days after January 1, 1915.

Estimated Expenses Nine Months, April 1 to December 31, 1914.

Fixing lines Yolo by-pass-----	\$1,500 00
Fixing lines Butte by-pass-----	1,500 00
Property line survey—all by-passes-----	2,500 00
Completing data high-water marks-----	500 00
Completing assessment rolls, balance of work-----	31,000 00
Equalization hearings, fourteen counties (traveling and other expenses) -----	2,000 00
Office force—salaries -----	7,500 00
Office force—draughting room-----	9,000 00
Meetings and hearings—members per diem and expenses-----	9,000 00
Rent and miscellaneous expenses-----	2,500 00
Total -----	<hr/> \$67,000 00

THE FLOOD CONTROL COMMITTEE.

The Reclamation Board performs a pleasant duty in testifying to the very valuable services rendered to the flood control project by A. L. Shinn, representing the Sacramento Chamber of Commerce, and A. E. Anderson, president of the San Joaquin and Sacramento River Improvement Association, representing the San Francisco Chamber of Commerce, who, with the president of this Board, compose what is generally known as the Flood Control Committee. These private citizens have for over two years contributed time and attention and traveling expenses in acting as a general "steering committee" in furthering the project. One or more of them has made the argument at each of three hearings in Washington—before the Rivers and Harbors Committee and Commerce Committee, in February, 1912, and again in December, 1913, and before the Board of Engineers for Rivers and Harbors, in May, 1913. It is due to their efforts, in conjunction with the enthusiastic assistance of the California congressional delegation, that the project under the plan for financing it, as last outlined by the Débris Commission, has been approved by the Federal Government.

These citizens have been equally efficient within the State in securing cooperation of landowners and reclamation interests, in framing the present act, and in presenting it to the California legislature for enactment.

WHAT HAS BEEN ACCOMPLISHED.

Already much of the work necessary for completion of the project has been done, though progress has been very much more marked in that portion thereof to be paid for by interested landowners, the immediate benefit to be secured in reclaiming lands for cropping being an incentive.

UNCORKING OF THE RIVER.

Work at the mouth of the river under supervision of the California Débris Commission started in earnest in the summer of 1913, when two large suction dredges, which had taken a year to construct, were placed in commission. These dredges were constructed and this work commenced under an appropriation of \$400,000 by the State and \$400,000 by congress.

The project for the expenditure of the balance of this \$800,000 appropriation, after paying for the two dredges and the rest of the plant, includes the construction of new levees across Baker's Point and the western corner of Sherman Island, in order that the outer levees and eventually the points themselves may be removed, and the making of a first cut along the Solano shore of the river to increase its width.

The dredge "Sacramento" commenced work on August 25, 1913, on the construction of a new levee across the point of Sherman Island, at Dos Rios. This levee, which is a mile long, has been built of sand pumped from the river channel, the material being taken as far as possible from those portions of the channel that would have to be deepened in carrying out the project. The amount of material required to build the Dos Rios levee to the required height and dimensions, provided there were no settlement, was estimated at about 200,000 cubic yards. It was found that the ground would not support the weight of a sand levee, and the settlement has been such that by the end of the year 1913, although 778,350 cubic yards had been placed, the levee was only about half completed.

During the same period the dredge "San Joaquin" has been engaged in making a cut along the Solano shore of the river, 941,708 cubic yards of material having been handled up to the end of 1913.

IMPORTANCE OF THE PROJECT.

What the completion—and the very early completion—of the flood control project means to the State of California may be gathered from the following statement of facts:

Of the 1,726,553 acres of land in the Sacramento and San Joaquin Drainage District, and all subject to overflow, about 500,000 acres are under reclamation, complete or nearly complete; some of it expensive and assumed to be safe, most of it precarious and subject to damage, even in ordinary floods. About 250,000 acres have reclamation commenced or planned, and about 1,000,000 acres are unreclaimed, with no plans for reclamation in sight and no plans practicable unless the flood control project is carried through.

At present, and while existing conditions continue, none of the 500,000 acres reclaimed or the 250,000 acres being reclaimed will be safe from inundation. The flood plane raises each year with the increase in reclamation and corresponding decrease of reservoir and channel capacity for flood waters, and even the steady growth in height and strength of levees can not long keep the waters out. Some of the island districts in the delta of the Sacramento and San Joaquin boast that no floods that the hills can send down will submerge them; but one of the best authorities on conditions in this territory states positively that had the flood of January, 1914, lasted one week, instead of two days, not an island in the delta would have remained above water. It is safe to say that with conditions as they are the direct damage and the increased expense of levee construction and repair for 750,000 acres during the next ten years would be not less than \$30 per acre, or \$22,500,000; and this is the entire amount to be expended by property owners for completion of the project which will insure against future flood and remove the necessity for raising levees—and much of that \$22,500,000 has already been expended.

Of the 1,000,000 acres now lost to reclamation which can be reclaimed if the project is carried out, most of the land has at present nothing but a nominal and speculative value. Some is held at from \$15 to \$40 per acre, because of the opportunity for summer cropping. All of this land permanently reclaimed would be worth \$250 per acre, and the cost of reclamation and project assessment would vary from, say \$75 to \$150. There would be added immediately to the wealth of the State, in increased value of this land for assessment, as well as productive purposes, at least \$200 per acre, or \$200,000,000.

This land reclaimed is capable of intensive cultivation and the growing of the most valuable crops. It would rent for from \$15 to \$35 per acre per year, and its products would be worth from \$40 to \$200 per acre. At a low average figure the 1,000,000 acres will produce eventually \$60,000,000 per year—and with the advantages offered by the Panama canal in markets, it probably would not be many years until the entire acreage was producing at this or a higher rate.

In population the results would be equally marked. Under continuance of existing conditions this 1,000,000 acres will never support any population. The 750,000 acres will be marked by comparatively small number of homes, because of danger from floods. After completion of the flood control project the entire district will rapidly fill with fine homes, and in time support millions of desirable citizens, living in comfort and luxury from the products of the soil and from the businesses and communities fostered and created by such activities.

How can California offer greater inducement and more rapidly secure the most desirable class of immigration than by making it possible within the next few years to place such lands as these on the market on reasonable terms?

Can all the factories which California may hope to establish in double the time, and at many times the expense, create a small portion of the permanent value for her which will come from the intensive cultivation under safe conditions of these 1,726,553 acres of rich land by happy, vigorous, contented families?

The Reclamation Board feels that the possibilities indicated furnish full justification for the time and attention it has given to the project, and also for all necessary assistance from the State and the legislature.

Respectfully submitted.

V. S. McCLATCHY.

OFFICE OF THE INDUSTRIAL WELFARE COMMISSION,
SAN FRANCISCO, January 4, 1915.

Sir:

In compliance with Chapter 324, Statutes of 1913, we have the honor to transmit herewith the first biennial report of the Industrial Welfare Commission.

Respectfully,

INDUSTRIAL WELFARE COMMISSION,

FRANK J. MURASKY,

Chairman.

*To His Excellency, HIRAM W. JOHNSON,
Governor of the State of California.*

INTRODUCTION.

The act establishing the Industrial Welfare Commission became effective on August 10, 1913. On September 16, 1913, the governor appointed the following persons as commissioners, for the terms indicated:

- Judge Frank J. Murasky, San Francisco, for the term ending September 16, 1917;
- A. Bonnheim, Sacramento, for the term ending September 16, 1916;
- Katherine Philips Edson, Los Angeles, for the term ending September 16, 1915;
- Walter G. Mathewson, San Jose, for the term ending September 16, 1914;
- A. B. C. Dohrmann, San Francisco, for the term ending September 16, 1914.

The first meeting of the Commission was held in San Francisco on October 6, 1913. Judge Frank J. Murasky was elected chairman and Mr. A. B. C. Dohrmann was requested to act as temporary secretary. A number of meetings were held at which persons familiar with economic and sociological questions were invited to advise with the Commission and give their help and advice on the work.

The original intention was to have the investigations made by the Bureau of Labor Statistics, but this was found impractical owing to the fact that the bureau was already overburdened with its regular work and could not give enough time to the special work of this Commission.

On January 2, 1914, the Commission opened permanent offices in San Francisco and appointed H. A. Scheel secretary. Offices were also opened in Los Angeles at a later date in order to expedite the work. As soon as the Commission was permanently organized plans for the conduct of the work and investigations of the Commission were adopted.

The work of the Commission was divided into six large divisions:

- (1) Investigations.
- (2) Preliminary conferences.
- (3) Wage boards.
- (4) Public hearings.
- (5) Rulings.
- (6) Law enforcement.

This report deals with the first two divisions, as it was necessary to complete these before the Commission could enter upon the work in the other divisions. Under the provisions of the act creating the Com-

mission it is the duty of the Commission to first "ascertain the wages paid, the hours and conditions of labor and employment in the various occupations, trades and industries in which women and minors are employed in the State of California, and to make investigations into the comfort, health, safety and welfare of such women and minors."

Investigators were placed in the field in the early part of February, and the investigations have been diligently pursued to the present, an enormous amount of information having been gathered. The preliminary conferences with representatives of various industries were really an adjunct to the investigations. These conferences were held for the purpose of obtaining first hand information from persons conversant with the industries under consideration, and for the further purpose of obtaining their cooperation.

The Commission early realized that little headway could be made with its investigations unless it had the cooperation of both the employer and the employee. The conferences were eminently successful in bringing about a better understanding by the employer of the aims and objects of the law, and in establishing a spirit of cooperation on the part of the employer in assisting the Commission in making its investigations.

There has been no attempt on the part of the Commission to make its investigations fit any preconceived ideas, nor has it attempted to act hastily in order to meet any popular clamor.

While the Commission has made no rulings fixing minimum wages, the effect of its work has been that, in many instances, employers have voluntarily raised the minimum rates of wages paid in their establishments. The most gratifying part of the work of the Commission has been this voluntary action on the part of employers in many industries, after the Commission had begun its work and the matter had been drawn to the employers' attention.

The Commission believes that it has pursued the correct policy in postponing the making of rulings until it has a thorough knowledge of the subject before it; also, in seeking to have the employers cooperate with it rather than taking an antagonistic position against them. The Commission wants to feel that when its rulings are made, these rulings will not injure the persons for whom the benefits of the law were intended.

The Commission was also confronted with a peculiar situation in California. At the legislature of 1913, when the act creating the Commission was passed, there was also passed an act submitting to the

people a constitutional amendment commonly known as the "Minimum Wage Amendment." The amendment read as follows:

"The legislature may, by appropriate legislation, provide for the establishment of a minimum wage for women and minors and may provide for the comfort, health, safety and general welfare of any and all employees. No provision of this constitution shall be construed as a limitation upon the authority of the legislature to confer upon any commission now or hereafter created such power and authority as the legislature may deem requisite to carry out the provisions of this section."

The submission of this amendment virtually put the question up to the people as to whether or not they were in accord with the work of the Commission. The amendment was voted on at the general election held on November 3, 1914, and was carried by a vote of 379,311 for, and 295,109 against. The people having declared in favor of the minimum wage legislation, the Commission will, as soon as all of its information is compiled, take up the other divisions of its work, namely, Wage Boards, Public Hearings, Rulings and Law Enforcement.

SCOPE OF INVESTIGATIONS.

The investigation of industries included the examination of pay rolls, the investigation of the conditions under which women and minors were employed in each establishment, including a description of various occupations and processes, the sanitary condition of places of work, lunch rooms, welfare work, apprenticeship, etc. These investigations were all made at first hand by the investigators of the Commission.

The investigation of individual employees included the obtaining of individual schedules from employees, investigations of living and housing conditions, cost of living and individual budgets. The individual schedules were distributed at the places of employment, in envelopes provided with a seal. The balance of the work was done during the evenings, by investigators, at the place of residence of the employee.

These investigations were carried on in the five principal industrial and commercial centers, to wit: San Francisco, Los Angeles, Oakland, Sacramento and San Diego.

The industries investigated so far have been:

1. Mercantile.
2. Laundries.
3. Manufacturing.

(Candies, confectionery, paper boxes, clothing, printing, publishing, tobacco, shoes, gloves, furnishings, food products.)

4. Fruit canning.
5. Telephone and telegraph.
6. Hotels and restaurants.

The investigations were begun after a conference had been held with the representatives of the industry, and were pursued until the industry was covered. The nature and value of these conferences will be explained later in the report. Suffice it to say that when an investigator went into an industry concerning which conferences had been held, the employers understood what was wanted and the work was greatly facilitated. In addition, we were able to obtain information which could not have been obtained if we had had the opposition of the employers, as the employees would then have been afraid to fill out their schedules, for fear of offending their employers. In many instances the employers posted notices and issued circulars requesting the employees to fill out their schedules and cooperate with the Commission.

The usual procedure used in investigating establishments was as follows:

The investigator took a copy of the pay roll and made a complete report on the conditions of employment, apprenticeship, welfare work,

etc., and left individual schedules with the employees. These schedules were taken home by the employees and returned the next day, enclosed in sealed envelopes. The envelopes were gathered up by the investigator and opened in the office of the Commission. These schedules were then compared with the copy of the pay roll. In many instances employees refused to fill out the schedules, but this was to be expected, as some of them believed it was an attempt to delve into their personal affairs. The number of schedules obtained was greater than we had anticipated. In many establishments we obtained returns from 75 to 90 per cent of the employees, that is, in the mercantile establishments. It was far more difficult to obtain these schedules in the manufacturing establishments. Over 20,000 of the individual schedules were returned, but all were not available for tabulation, many being improperly filled out or deficient in information. Some extremely interesting tabulations have been made from these schedules and are given under the chapters devoted to mercantile establishments and laundries. (See Tables 11 to 30 and 38 to 57.) These schedules bore the names and addresses of the employees and were used as a basis for our investigations into the conditions of living, cost of living and individual budgets of the employees.

The schedules selected for further investigation were those of women adrift.

The investigators were sent to the place of residence of the employee, as given in the schedule. The schedules were numbered and their identity destroyed by tearing the slip containing the name and address from the rest of the schedule. These investigations were made in the evening after working hours and entailed a very considerable amount of work, as it often required three or four visits before the investigator could find the employee at home. The investigator interrogated the employees very closely on their expenditures and made up a budget on the actual cost of living. The investigator also obtained a short personal history of the individual and reported on the living and housing conditions. All attempts to obtain budgets by mail proved useless, so the work was confined entirely to personal visits. The results of these investigations will be treated in the chapter devoted to the cost of living.

Many attempts were made to obtain estimates of the cost of living from both employers and employees, but these were uniformly unsuccessful. The mind of the public had been influenced by the notoriety given to similar investigations in other states. This made the employer disinclined to commit himself and the employee prone to exaggerate.

In this report we have not attempted a complete survey of the entire

industrial field. The report is preliminary, and no final conclusions are stated. It is our intention to supplement this first report, from time to time, with the results of further investigations and with more complete compilations of the material already gathered.

We have presented rather extensively the investigations into the mercantile establishments and laundries, these two industries being among the largest from the point of the number of women employed.

We have treated manufacturing, and telephone and telegraph companies, in a summary fashion, leaving these industries for further investigation.

In fruit canning, we have undertaken probably the most comprehensive study ever made of this much discussed industry. We held conferences with the fruit canners and they agreed to keep complete records for the entire season of 1914, showing the number of hours worked each day and the wages earned by each woman and minor during the entire season. The fruit canning industry is exempt from the provisions of the eight hour law for women, and we had no means of ascertaining the hours worked therein. The fruit canners agreed with the Commission that correct information was absolutely essential in order to properly deal with the industry, and further agreed to keep the records required to obtain such information. The keeping of these records has entailed a tremendous amount of work and a considerable cost to the canners. We are now receiving reports from the various canneries as fast as they complete copying the record on forms provided by the Commission. In a very short time the records will be complete and we shall begin a tabulation of them. This tabulation will involve a very large amount of work, as the reports contain the individual records of probably over 20,000 women and children.

TABULATIONS.

In compiling the statistics on wages we have aimed to make the tables as simple and comprehensive as possible. Each wage table gives the number of women in any wage group and has two subdivisions: *a*, showing the per cent, and *b*, the cumulative per cent. The wages of women 18 years of age and over and those under 18 years have been tabulated separately.

The tabulations submitted in this report cover wages of 22,972 women 18 years and over, and 2,289 women under 18 years, being a total of 25,261.

The wages were tabulated from pay rolls which were corrected as to the age of women from individual schedules, as it was found that in most instances the employers' figures on women under 18 years of age were not correct. While in some instances this error was due to indif-

ference on the part of the employer, in most cases it was due to the desire on the part of the women to give an older age when seeking employment, believing that they would not be employed if they stated they were under 18 years of age.

Of the 22,972 women 18 years and over tabulated, 21.3 per cent received under \$8.00; 34.7 per cent under \$9.00; 49.1 per cent under \$10.00 per week; while 28.5 per cent received \$12.00 or over per week. Of the 2,289 women under 18 years, 41.8 per cent received less than \$6.00 per week. Almost half of these minors received between \$5.00 and \$6.99 per week.

CONFERENCES.

The Commission at the outset decided that its task was not to harass either the employers or employees, but to work with them in order to arrive at the true conditions in attempting to solve a very difficult problem. It was determined to hold preliminary conferences with the representatives of the various industries which were to be investigated. Whenever the employers in any industry had an organization, the Commission extended an invitation to the organization in order that the effects of the conferences would reach throughout the membership of such body. The employers responded to the invitations to meet with the Commission, and these conferences brought about the following results:

- (1) Education of the members of the Commission as to conditions in the various industries, from the employers' point of view;
- (2) Education of the employers as to the aims and objects of the law;
- (3) Cooperation on the part of the employers, which facilitated the work of investigating and insured a higher degree of accuracy;
- (4) Opportunity of the representatives of the various industries to meet the members of the Commission, acquaint themselves with the persons charged with the administration of the law and with the policy of the Commission.

A conference was held with the representatives of organized labor, which proved very instructive and valuable. Conferences were attempted with women in unorganized industries, but these proved unsatisfactory, as very few of the women responded to our invitation. It was therefore determined to make personal investigation of the individual employees.

The following conferences with employers were held by the Commission at the places and dates indicated:

1. Laundries	San Francisco	Jan. 30, 1914
2. Candy-confectionery	San Francisco	Jan. 31, 1914
3. Mercantile	San Francisco	Jan. 31, 1914
4. Mercantile	Los Angeles	Feb. 13, 1914
5. Laundries	Los Angeles	Feb. 13, 1914
6. Candy-confectionery	Los Angeles	Feb. 14, 1914
7. Canning	Los Angeles	Feb. 14, 1914
8. Mercantile	Sacramento	Feb. 21, 1914
9. Laundries	Sacramento	Feb. 21, 1914
10. Candy-confectionery	Sacramento	Feb. 21, 1914
11. Canning	San Francisco	Mar. 13, 1914
12. Dried fruit packing	San Francisco	Mar. 21, 1914
13. Garment manufacturing	San Francisco	May 15, 1914
14. Paper box manufacturing	San Francisco	May 15, 1914
15. Printing-bookbinding	San Francisco	May 16, 1914
16. Hotels-restaurants	San Francisco	Aug. 28, 1914

After these conferences, many employers made investigations of their own. Investigations were also made by some of the employers' associations, the most extensive of these being the investigation made by the California Retail Drygoods Association, which includes practically all of the large department stores in the state. This association made quite an elaborate investigation, and turned all of its *material over to the Commission.

The effect of the work of the Commission is already noticeable in the voluntary raising of the minimum wage paid in many establishments, particularly in the mercantile establishments. The increase is very noticeable in the city of Los Angeles. We submit for comparison the wages paid in some of the large department stores in Los Angeles, showing the wages paid before and after the Commission began its work.

**VOLUNTARY INCREASE IN WAGES PAID TO WOMEN IN DEPARTMENT
STORES IN LOS ANGELES.**

Establishment	Cumulative per cent of women receiving under \$6.00		Cumulative per cent of women receiving under \$9.00	
	1912	1914	1912	1914

d -----	14.6	7.2	50.8	35.2
Total -----	14.4	6.9	56.6	39.7

(The figures for the year 1912 are taken from the records of the Bureau of Labor Statistics.)

Total women employed in these establishments, 1912, 1,887.

Total women employed in these establishments, 1914, 2,080.

*See Appendix.

MINIMUM WAGE LAWS IN THE UNITED STATES.

In submitting this report the Commission deems it advisable to review briefly the laws and work of other states. The following states have enacted laws creating a commission to determine a minimum wage for women and minors:

MINIMUM WAGE LAWS.

State.	In Effect.
Massachusetts -----	July 1, 1912
(a) Utah -----	May 17, 1913
Oregon -----	June 2, 1913
Washington -----	June 13, 1913
Minnesota -----	June 26, 1913
Nebraska -----	July 17, 1913
Wisconsin -----	Aug. 1, 1913
California -----	Aug. 10, 1913
Colorado -----	Aug. 12, 1913

New York, Michigan and Ohio passed laws providing for investigations and reports to the legislature.

(a) In Utah the minimum wage for women was fixed by an act of the legislature. The law provides a minimum scale, as follows:

Experienced adults -----	\$1.25 per day
Adult learners and apprentices -----	.90 per day
Minors (under 18 years) -----	.75 per day

The period of apprenticeship is not more than one year.

In the eight states creating the commissions it is provided generally that these bodies may make initial investigations into existing conditions, and, if their findings indicate the wages paid are not sufficient to maintain the health and welfare of a woman, they may establish a subordinate board to determine a minimum wage for each industry, or, they may have hearings and determine a wage themselves. Subordinate boards for each industry are mandatory only in Wisconsin, Massachusetts and Nebraska. They are not provided for in the Colorado law. The basis on which the wage is to be determined by the Commission, or Wage Board, is the "necessary cost of proper living" or a "living wage," in five states, and the "necessary cost of living and financial condition of business" in Massachusetts, Nebraska and Colorado.

The laws apply to women and minors under 18 years of age in all the states except Minnesota and Wisconsin, where it is women and minors under 21 years; and in Utah the law applies to females only.

In all states the commission may exempt defectives from its rulings.

Special licenses may be granted to learners and apprentices in seven states, California and Colorado being the exceptions. In Massachusetts and Nebraska the enforcement of the rulings of the commission is limited to the publication in newspapers of the names of employers who

violate such rulings. In the other states the violation of a ruling of the commission is a misdemeanor and punishable by fine and imprisonment. The rulings of the commission may be set aside by the courts in Massachusetts and Nebraska, if compliance therewith would prevent "reasonable profit"; in Colorado and Wisconsin if unreasonable or unlawful; and in California, if procured by fraud, or if the commission acted outside of its powers.

Oregon, Washington, Massachusetts and Minnesota are the only states in which the commissions have made any rulings fixing a minimum wage. The rulings of the Oregon commission were attacked and the case is now pending before the Supreme Court of the United States, a decision being expected at an early date. An able brief has been written by Louis D. Brandeis and Josephine Goldmark in defense of the Oregon law. An injunction was issued against the Minnesota commission, estopping it from carrying out its rulings.

We present herewith, in condensed form, the rulings of the commissions in the states of Oregon, Washington, Massachusetts and Minnesota. These rulings are weekly wage rates unless otherwise stated:

OREGON.

City of Portland—

	Experienced Adult.	In Effect.
Manufacturing -----	\$8.64 week	Nov. 10, 1913
Mercantile -----	9.25 week	Nov. 23, 1913
Office -----	40.00 month	Feb. 2, 1914
Balance of state—		
All industries -----	8.25 week	Feb. 7, 1914
Inexperienced adult women, \$6.00 week.		
Maximum length of learners' period, <i>one</i> year.		

WASHINGTON.

	Over 18 yrs.	Under 18 yrs.	In Effect.
Mercantile -----	\$10.00 week	\$6.00 week	June 27, 1914
Factory -----	8.90 week	6.00 week	Aug. 1, 1914
Laundry and dye works-----	9.00 week	6.00 week	Aug. 24, 1914
Telephone and telegraph-----	9.00 week	6.00 week	Sept. 7, 1914

Apprenticeship, \$6.00 first six months; \$7.50 second six months.

Number of apprentices not to exceed 17 per cent of total adult female employees.

MASSACHUSETTS.

Brush industry—

Minimum time rate, 15½ cents per hour.

Learners and apprentices, 65 per cent of minimum.

Apprenticeship not longer than *one* year.

Piece workers must be paid at least 15½ cents per hour.

Ruling applies to all minors.

Effective August 15, 1914.

MINNESOTA.

Industries. Group (1)—

Cities of the	Women or minors of or- dinary ability.	In Effect.
First class -----	\$9.00 week	Nov. 23, 1914
Second, third and fourth class -----	8.50 week	Nov. 23, 1914
All other -----	8.00 week	Nov. 23, 1914

Industries. Group (2)—

Cities of the		
First class -----	\$8.75 week	Nov. 23, 1914
Second, third and fourth class -----	8.25 week	Nov. 23, 1914
All other -----	8.00 week	Nov. 23, 1914

Orders do not apply to learners or apprentices.

Group (1) : Mercantile, office, waitress or hairdressing occupation.

Group (2) : Manufacturing, mechanical, telephone, telegraph, laundry, dyeing, dry cleaning, lunch room, restaurant or hotel occupation.

MERCANTILE ESTABLISHMENTS.

The investigation of mercantile establishments extended principally to the larger establishments employing a considerable number of women. The tabulations submitted in this report cover 192 establishments located in San Francisco, Los Angeles, Oakland, Sacramento and San Diego, employing a total of 12,166 women, of whom 10,795 were adults 18 years and over and 1,371 minors under 18 years. There are also employed in these establishments 475 boys under 18 years of age, but these are not included in the tabulations.

The establishments investigated were principally those coming under the general heading of department stores, dry goods stores, clothing and furnishing stores. Retail candy stores, millinery stores and 5, 10 and 15 cent stores have been kept separate (Tables 8-9-10), but the totals are included in the general summary of mercantile establishments (Table 7).

WAGES.

There is a considerable variation in the wages paid in the different localities and between different establishments doing the same kind of business in the same locality. The tabulations (Tables 1 to 10*b*) were compiled from payrolls and give the rate of wages per week, except in the cases of piece workers, in which case the wages have been computed as the average earnings when working full time. The number of piece workers in mercantile establishments, however, is very small. The tables have been made very complete so as to require little in the way of explanation. Each table is made up in three parts: the first showing the number of women in each wage group; the second, the percentage, and the third, the cumulative per cent.

In San Francisco, the investigation covered 4,175 women 18 years and over, of which 18.5 per cent received under \$8.00 per week; 31.1 per cent received under \$9.00 and 44.8 per cent under \$10.00 per week. Of the 403 women under 18 years of age, 62.3 per cent received under \$6.00 per week.

In Los Angeles, of the total 4,365 women 18 years and over, the investigation showed that 13.9 per cent received under \$8.00 per week; 29 per cent under \$9.00, and 42.4 per cent under \$10.00 per week. Of the 614 women under 18 years 55.2 per cent received under \$6.00 per week.

In Oakland, of the total 1,153 women 18 years and over investigated, 29 per cent received less than \$8.00 per week; 43.4 per cent received less than \$9.00 per week, and 55.4 per cent received less than \$10.00 per week. Of the 167 women under 18 years of age 71.3 per cent received less than \$6.00 per week.

In Sacramento, of the total 702 women 18 years and over investigated, 38.2 per cent received under \$8.00 per week; 53.7 per cent received under \$9.00 per week, and 65.5 per cent received under \$10.00 per week. Of the total 146 under 18 years 79.4 per cent received under \$6.00 per week.

In San Diego, of the total 400 women 18 years and over, 31.8 per cent received under \$8.00 per week; 43.3 per cent received under \$9.00 and 53.5 per cent under \$10.00 per week. Of the total 41 under 18 years 51.3 per cent received under \$6.00 per week.

The investigation showed that the percentage of low paid women in mercantile establishments was least in the city of Los Angeles and greatest in the city of Sacramento.

The wages are given separately for the various occupation groups. For the purpose of tabulation the following occupation groups were adopted:

1. Sales.
2. Office and clerical.
3. Factory and workroom hands (time and piece work kept separate).
4. All others, which includes wrappers, messengers, stock clerks, markers and waitresses.

Confining ourselves to the first group of mercantile establishments, namely: department stores, dry goods stores, clothing and furnishing stores, we find that the majority of employees are employed as saleswomen.

In San Francisco, 14.3 per cent of the adult saleswomen received less than \$8.00 per week; 29.7 per cent received less than \$9.00 and 48.5 per cent received less than \$10.00 per week. (Table 1.)

In Los Angeles, 4.6 per cent of the adult saleswomen received under \$8.00 per week; 17.8 per cent under \$9.00 and 36.2 per cent under \$10.00 per week. (Table 2.)

In Oakland, 28.9 per cent of the adult saleswomen received under \$8.00; 43.6 per cent under \$9.00 and 56.1 per cent under \$10.00 per week. (Table 3.)

In Sacramento, 24.5 per cent of the adult saleswomen received under \$8.00 per week; 42.6 per cent under \$9.00 per week and 55.8 per cent under \$10.00 per week. (Table 4.)

In San Diego, 31 per cent of the adult saleswomen received under \$8.00 per week; 34.5 per cent under \$9.00 per week and 56.4 per cent under \$10.00 per week. (Table 5.)

The tabulations disclosed two definite groups into which the wages fall. One is that of the average low-priced saleswomen and ranges between \$8.00 and \$9.95 per week. The other is that of the expe-

rienced saleswomen and falls into the group that receive \$12.00 and over per week. As stated before, the tabulations are based on rates of wages and do not include commissions, bonuses or p. m.'s.

The second important group of employees in mercantile establishments is workroom hands, made up principally of alteration hands. The majority of these women receive \$12.00 and over per week, but their work has not the element of permanency, being affected largely by the seasons.

The third group is that of office and clerical employees. Of the adult women office employees in San Francisco, 39.5 per cent receive under \$10.00 per week; while in Los Angeles, 45.2 per cent receive less than this amount; in Oakland, 51.9 per cent; in Sacramento, 76.8 per cent and in San Diego, 35.1 per cent.

Some stores make it a rule to employ no one at less than \$25.00 per month, and no one on the sales force at less than \$30.00 per month. Some have a starting wage at \$6.00 per week for minors, and \$8.00 for adults, while in a few instances, no one, not excepting cash boys, is paid less than \$8.00 per week.

Formerly the minimum rate of wages was uniformly lower than at present. Now there are very few stores beginning people at less than \$20.00 per month, whereas a few years ago \$3.50 to \$4.00 per week was the standard wage for beginners. Many stores pay salaries plus a commission on all sales, or on all sales after a fixed amount has been sold. This is more customary in cloak and suit departments than in any other, though in some instances it is the system prevailing throughout the entire establishment. Several stores inaugurated the commission system in the latter part of 1913, in an effort to prevent overpaying people who were not earning their wages, but who were too good to discharge, it being contrary to the custom of most establishments to reduce wages. There is much to be said both for and against the commission system. It is effective in raising a woman's enthusiasm in her work; it assures a fairly equitable distribution of wages among the lazy and energetic, giving the hard worker her just share and when combined with a fair wage of from \$40.00 to \$60.00 per month can work no great hardship on those whom fortune does not favor for a month or so. It is, however, said to be the cause of constant friction and discord among the employees who are thereby placed in definite competition with one another. The fact that it makes of each saleswoman a small self-interested merchant is often of doubtful value to the employer, as it is productive of but scant courtesy to the "looker" and poor shopper, causes the saleswoman to neglect her stock work and encourages her to show only quick-selling goods, leaving the less popular articles unshown until they are out of style and have to be marked down, or heavily

p. m.'d. The p. m. is a bonus paid for the sale of odd sizes, or old and unpopular goods. Many saleswomen make from 50¢ to \$3.00 or \$4.00 per month on these bonuses. The amount of commission earned by a saleswoman varies greatly with the class of merchandise she is selling. An examination of the books of a large department store in which accurate records have been kept covering a period of one year, showed that the average commission earned by all saleswomen in the establishment was 87 cents per week. In individual cases the average ran from \$0.02 to \$6.41 per week. This average, of course, cannot be taken as indicative of the amounts earned in commissions by women in other establishments. It will be necessary for the various establishments to keep complete records covering a period of at least one year in order to determine the amount of commission earned. The majority of establishments investigated are working on the same kind of commission system, trying to devise a method to increase efficiency. The p. m. practice is not as popular as formerly, as it has been found harmful to the store in the long run. The customer to whom a p. m.'d article has been sold by an over-zealous saleswoman often becomes dissatisfied. The commission system, however, is a part of the modern system of cost accounting and is apparently growing up with the cost accounting and efficiency of department store management. Every store has a different system. About the only similarity being that they are all working on it as a problem. Some establishments have installed an automatic salary advance, up to the point where a woman earns \$40 or more. Beyond that point her advancement becomes a matter between herself and her employer. The aim of most establishments is to base a saleswoman's wage on the amount of goods she sells. The opportunity to make big sales varies with the different departments, although the service required in a low sale department may exceed that of a large sale department. This fact has to be taken into consideration when apportioning wages. Any attempt to reduce all wages to a certain per cent of sales throughout an entire establishment would result in manifest unfairness.

Fines have been discontinued in most establishments, as they have been found to be productive of hard feelings and not tending to efficiency. A few stores still impose fines for lateness and for shortages by cashiers. All absences are usually deducted from salary, with the exception of one hour's personal time, which is occasionally allowed for necessary visits to the doctor or dentist, or similar emergencies. Absence on the day following a holiday is sometimes deducted double. A few stores make no deductions for absences, but any employee found taking advantage of this is summarily discharged.

HOURS.

By law, the hours of women and minors is limited to eight per day and forty-eight per week. The working hours are usually between 9 a.m. and 6 p.m. A few stores keep open on Saturday nights and a few nights before Christmas. Some stores close at 12:30 or 1 o'clock on Saturdays during the summer months. In some establishments extra hands are employed on certain days of the week and Saturday; these are usually women who are married and previously worked for the firm. An effort is being made to concentrate shopping into regular hours the year round. This is particularly difficult in stores largely patronized by laboring people who must work all day and can find no time to make purchases except in the evenings. There are a few part-time workers such as waitresses who are employed in the cafes and cafeterias in connection with department stores where a noon meal is served. Some stores close at 5:30 or 5:45 p. m., this being compensated some time by reduction of the lunch period to 45 minutes.

REGULARITY OF EMPLOYMENT.

The earnings of women employed in mercantile establishments are probably more regular than in any other industry investigated. The wages of women who are paid commissions fluctuate very decidedly from month to month, so that the woman employed in this manner may have no reasonable certainty as to what her income will be and is unable to plan her expenses in the future. Women in the cloak and suit and millinery departments often have to take a vacation of a month or two twice a year, and the majority of women in the work-rooms rarely have over eight months' employment in the year. At Christmas time these skilled operators and saleswomen are often put to work on the regular sales force. As the work is very hard and the wages reduced, most of them prefer to rest rather than accept such an uncongenial employment. The legal holidays, as a rule, are not deducted from the wages and a week's vacation is allowed to each person who has been in the firm's employ for a reasonable length of time, usually six months or a year. If the season is dull the woman is sometimes requested to take another week at her own expense. Many wish to do this, anyway, so it is often no real hardship. As the year 1914 was an unusually dull one, layoffs were more frequent than ever before. Many girls were discharged in the universal effort to cut down expenses. Some firms laid off part of their force for two or three days each week. Christmas extras have from one week to three months' employment, and extra girls are employed from time to time for special sales lasting from one day to one week.

WELFARE WORK.

In most of the larger stores considerable attention has been paid to the matter of welfare work among the women employees. In practically all of these stores some provision has been made for furnishing lunch at a small cost, or providing facilities for the use of the women to prepare their lunch. In some instances a regular meal is served, cafeteria style, at prices ranging from 2½ cents to 15 cents per dish, this charge covering the cost of materials only, not taking into account the cost of fuel, labor and rent which the store pays. Some employers find that if their girls can obtain a hot, nourishing meal at noon for small cost, they are very willing to take advantage of it, and it serves to keep them well and to reduce the loss and trouble incident upon frequent absences for sickness. Others serve only hot drinks, sandwiches and rolls; others have a gas plate upon which the girls are at liberty to make themselves a hot drink to supplement a cold lunch which many bring from home. Lunch rooms are of various degrees of attractiveness, ranging from the spacious sunny room on an upper floor to a dark, cramped, cold room in the basement where old newspapers form the only table-cloths. A few have pianos in connection with these rooms, either at one end or in an adjoining room. One store employs a pianist during the lunch hours and all those who wish can dance on the excellent floor of the large room provided for that purpose. Many find that this exercise so aids the circulation that it provides a genuine relaxation and rest, others are unable to indulge in so violent a pastime. For them, couches with blankets are provided, as well as easy chairs in a reading room, well stocked with magazines and newspapers; others sew upon their own clothing or make embroidered Christmas gifts in the sewing room, and others take the air under the awnings of the roof garden. Hot and cold shower baths also may be taken by those whose home facilities are inadequate to their needs. These many perquisites are not of course to be found in every store, but several make some slight effort toward providing for their employees' comfort and recreation during the noon hour. Many of the larger stores have social clubs which give occasional dances, dinners, theatre and card parties, attendance upon which is a perquisite of membership, but is more often a privilege to be purchased at a moderate price. One store employs a director of recreation, whose special duty it is to organize and supervise all such social clubs, as well as dress-making and millinery classes, amateur theatricals and the like. In this instance a membership is free. These clubs are often the only social life the girls have, and their activities are a source of great pleasure to the members.

A hospital room containing a couch, a medical cabinet and a few simple remedies is provided for the use of both customers and employees

in cases of emergency in some stores. The matron presiding over this room is sometimes a trained nurse. A doctor and dentist in attendance for a few hours every day give their services free to employees of one of the large firms.

There is a considerable amount of criticism of these various kinds of welfare work, both by the employees and by the managers of other firms which do not indulge in anything of the sort. It is said that it is cheaper to hold employees by these methods than by paying fair wages; that firms deem it good policy to give this charity, thereby keeping their help in a constant state of gratitude from which they are not likely to digress long enough to organize for the betterment of their conditions by their own efforts. As minimum wages have risen steadily during the past two or three years in the store doing the largest amount of this sort of work, the first criticism is of doubtful validity. The fact that no form of labor organization is found in establishments where welfare work is scorned, partially disproves the second also. While, of the fact that it adds notably to the comfort and pleasure of living for many people there can be no doubt. The stores which do this sort of work believe that it pays. A loyal, happy and healthy working force can give more and better service than an unenthusiastic half-alive set of people can. It is contrary to their policy to discharge people for inefficiency, for by so doing they realize that they merely shift the burden on to someone else and take in its place the shifted burden of inefficiency from another store, or a raw recruit equally as bad. They believe that in most cases efficiency can be created and fostered in the individual, and her loyalty so assured that a permanent and capable force can be maintained which will give the maximum quality and quantity of service to the public and greatest profit to the store.

In addition to the welfare work undertaken by the various employers, many establishments have employees' beneficial associations supported by dues from employees ranging from 10 cents a month up, commensurate with the size of the salary earned. Membership in these associations is in most establishments compulsory, and dues are extracted from the wages before the pay envelope reaches the employee. These associations pay sick benefits from \$2.00 to \$10.00 or \$12.50 per week for a period not exceeding ten weeks in one year. Death benefits are paid in amounts ranging from \$50.00 to \$100.00, according to the class to which the members belong. Benefits are usually forfeited by persons suffering from chronic diseases or from illnesses brought on by their own indiscretion. The Executive Committee is given the privilege of granting further benefits in exceptional cases. Benefits are not usually given until the employee has been with the firm two or three months. If the employee for any reason discontinues her employment with the

firm, she relinquishes thereby all rights to membership, but if she is ever re-employed, she again becomes a member at her former standing. Many employees think it a hardship to have money thus deducted from their salary for a benefit which they may never require.

INDIVIDUAL SCHEDULES.

San Francisco Mercantile Establishments.

Individual schedules were obtained from 2413 women employed in mercantile establishments in San Francisco. These schedules have been tabulated, showing the wages received by these women in relation to their age, marital condition, number of years working, number of years in present occupation, home condition and schooling; also showing the relation between home condition and age and marital condition, and between nativity, occupation and home condition. (Tables 11-20.) The same information has been tabulated for 3316 women employed in the mercantile establishment in Los Angeles. (Table 21-30).

In San Francisco the tabulations of the women scheduled show that 46.1 per cent of the women were 25 years or over.

The wages seem to bear a marked relation to the age of the employees: 98.6 per cent of those under 18 years received less than \$10.00 per week; 85.5 per cent of those between 18 and 21 years; 51.6 per cent of those between 21 and 25 years, and 32.2 per cent of those 25 years and over received less than this amount. (Table 11.)

Single women comprise 73.8 per cent of those reported; married women, 12 per cent; widows, 7.8 per cent, and divorced women 6.4 per cent. Out of the 290 married women scheduled, 185 had husbands living at home, contributing to their support, and the highest paid women were the widows. This coincides with the statements of many employers to the effect that widows and divorced women having one or more children to support, are the most desirable type of female employee; having these responsibilities, they exert more effort and produce more value for the employer than any other type of worker. (Table 12.)

The relation between experience and wages received is brought out in tables 13 and 14. Table 13 shows the years working and table 14 the years in present occupation. Of the women scheduled, 10 per cent have been working less than one year, whereas 27.6 per cent have been in present occupation less than one year. The tabulations show that there is not a very decided increase in wages until after two years' experience.

The figures gathered on home conditions show that 77.2 per cent of the women reported were living at home, and 22.8 per cent were adrift. The wages received by those adrift were considerably higher than those living at home; 43.6 per cent of those adrift received less than \$10.00

per week, while 60.6 per cent of those receiving less than this lived at home.

In table 16 there is presented an interesting field for study, in the relation between schooling and wages. The tabulations show that 46.8 per cent of the women had completed the eighth grade.

The women adrift were mostly over 25 years of age. Practically all of those under 18 years of age lived at home, only 2.9 per cent being adrift. Between 18 and 21 years, 8.8 per cent were adrift; between 21 and 25 years, 19.8 per cent were adrift, while those 25 years and over 36 per cent were adrift. The largest percentage of those adrift were widows and divorced women. (Tables 17-18.)

Native born women made up 85.7 per cent of the total employees scheduled. The percentage of foreign born women was greatest in the workrooms where they constitute 26 per cent of the total. (Table 19.) The percentage of those adrift was greater in the foreign born than in the native born, being 17.9 per cent in the former and 13.2 per cent in the latter. (Table 20.)

Los Angeles Mercantile Establishments.

In Los Angeles individual schedules were obtained from 3316 women employed in mercantile establishments. Of the total number of women scheduled, 47.7 per cent were 25 years and over. The wages received vary with the ages: 97.1 per cent of those under 18 years received less than \$10.00 per week; 90.3 per cent of those between 18 and 21; 58.7 per cent of those between 21 and 25, and 22.5 per cent of those 25 years and over, received less than \$10.00 per week. (Table 21.)

Single women comprise 74.5 per cent of those scheduled; married women 12.7 per cent, widows 7.7 per cent, and divorcees 5.1 per cent. Out of the total 423 women, 238 had husbands at home contributing to their support. The widows showed a greater percentage of the higher wage groups, 48 per cent receiving \$12.00 and over per week. (Table 22.)

The tabulations of experience show that 11.3 per cent had been working less than one year, whereas 51.2 per cent had been in the present occupation less than one year. There were more women that had been working over five years than under five years, although the majority had been in present occupation less than three years. (Tables 23-24.) The tabulation of the home conditions of these women show that 78.8 per cent lived at home and 21.2 per cent were adrift. The wages of those adrift were much higher than the number living at home; 59.9 per cent of those living at home received less than \$10.00 per week, while 26.9 per cent of those adrift received less than \$10.00 per week. (Table 25.)

A noticeable feature in the tabulation of schooling of women employed in the mercantile establishments in Los Angeles was that 33.8

per cent had attended high school, as against 19.5 per cent in San Francisco. (Table 26.) The women adrift were mostly those 25 years and over. Only 21.5 per cent of those under 18 were adrift; between 18 and 21 years, 6.5 per cent; between those 21 to 25, 12.3 per cent, while those 25 years and over 36.5 per cent were adrift. (Table 27.) The percentage of those adrift ran higher in widows and divorced women. Of the single women, 18.9 per cent were adrift. (table 28.) Native born women made up 19.4 per cent of the total employees. The percentage of foreign born was greatest in the workrooms where they constituted 17.9 per cent of the total. (Table 29.) The percentage of those adrift was greater in the native born than in foreign born. This is the reverse of the condition in San Francisco.

LAUNDRIES.

The investigations of the laundries covered all of the steam laundries located in San Francisco, Los Angeles, Oakland, Sacramento and San Diego, making a total of 81 establishments employing 3954 women, of whom 3765 were adults 18 years and over, and 189 minors under 18 years. (Table 36.) In addition to these, there were investigated 15 dyeing and cleaning establishments employing 522 women 18 years and over, and 16 minors under 18 years. (Table 37.)

WAGES.

The wages paid in the different cities is determined largely by the fact whether or not the workers are organized. Laundry organizations exist in San Francisco, Oakland and Sacramento. There are no unions in Los Angeles and San Diego. Some years ago these two cities had small unions but the last remnants of them have disappeared.

The laundry situation in San Francisco is of peculiar interest as it is an universal belief that women are difficult to organize, but the laundries in San Francisco, where so many women are employed, have the distinction of being highly organized. Not a single steam laundry in San Francisco remains outside of the union agreement so far as could be discovered.

The lowest wage under the union agreement is \$7.00 per week. This is for apprentices in the shaking room and is permissible for two weeks only, after which period \$8.00 must be paid. The mangle girls receive \$8.50 and all folders \$9.00 per week. Women on certain small machines, such as the cuff press and collar ironer are also paid this rate. Those who do starching and sewing receive \$9.00 per week, as do the ironers for the first six months. The wages of tiers, feeders, dampeners and dry house hands are \$10.00 per week. Body ironers and hand ironers receive in their second six months \$10.50 per week. Ironers after the first year must be paid \$11.50. This is also the rate for the Jumbo ironer. Polishers and shirt press operators receive \$13.50 per week. Markers and distributors receive from \$18.00 to \$22.50 per week. The union rates determine the minimum in each grade only and an exceptionally good worker can in most cases obtain more than union rates. A few laundries make it a rule never to pay any one in excess of union regulations. Others do so in individual cases, but wish to have the fact kept a secret for fear the union will raise the rates again, while others purposely pay a good number of their people more than they are compelled to in order that they may keep a permanent and satisfied force.

In San Francisco our investigation covered 1073 women 18 years and over, of which number 1.4 per cent received under \$8.00 per week; 32.6

per cent under \$9.00 and 53.2 per cent under \$10.00 per week. Of the 41 women under 18 years of age none received less than \$7.00 per week and 4.9 per cent received less than \$8.00.

In Los Angeles, the investigation covered 1813 women 18 years and over, of which number 45.5 per cent received under \$8.00; 60.4 per cent under \$9.00; 76.1 per cent under \$10.00. Of the 99 minors employed 73.8 per cent received under \$8.00 per week.

In Oakland the investigation covered 505 women 18 years of age and over, of which number 12.5 per cent received under \$8.00; 48.1 per cent under \$9.00 and 63.0 per cent under \$10.00. Of the 26 minors none received less than \$7.00 per week; 50.0 per cent fell in the group from \$7.00 to \$7.99 per week.

In Sacramento, the investigation covered 163 women 18 years of age and over, of which number 1.8 per cent received under \$8.00; 8.5 per cent under \$9.00 and 42.3 per cent under \$10.00 per week. There were only 8 minors employed, none receiving less than \$7.00.

In San Diego, the investigation covered 211 women of whom 42.2 per cent received under \$8.00; 54.1 per cent under \$9.00 and 73.5 per cent under \$10.00. Only 15 minors were employed, none receiving less than \$6.00 per week.

REGULARITY OF WORK.

In considering the wages paid in laundries, the regularity of the work plays an important part. Under union regulations, an employee must be paid for a full week's work if layoffs occur during the week. Part time workers are not permitted. The women are encouraged to complete their work as early as possible on Saturday and are usually permitted to leave as soon as it is finished without suffering a wage deduction. This is in order that the drivers may get out their routes as early as possible, thus giving better service to their customers. Formerly, before any regulations prevailed, many laundry workers were employed only a few days in each week. After the work is finished on Saturday night there can be little work for the starchers and finishers to do until late on Monday and in some cases not until Tuesday. Many of the shakers and mangle hands could complete their work before the week's end. As already stated, the employee must be paid for a full week's work if layoffs occur during the week.

In places which are not under union agreement, especially Los Angeles and San Diego, conditions are very different. Before the "Eight Hour Law for Women" went into effect in these cities the bulk of the work was done by working long hours on Tuesday, Wednesday and Thursday. Now it has been necessary to spread the work over a longer period. A holdover system of allowing 10 per cent of the work sent in at the end of the week and returned the middle

of the following week has been tried, but it has not developed as much as desired. The hotel, restaurant and apartment house work spreads over the entire week and helps to keep up the balance of work. The laundries having a large amount of hotel work keep going steadily for 48 hours a week, but those having chiefly a family trade have greater fluctuations. There are no standards of time, the question being merely, what are the needs of the particular laundry. The rates of wages can not be considered as the earnings, as the amount of time worked during the week by each woman fluctuates considerably. Most of the laundries in these two cities (Los Angeles and San Diego) deduct for every hour or half hour not worked.

PROCESSES.

When clothes reach a modern laundry they go first to the marker and sorter who marks the articles in each bundle so that they will be identifiable, and sorts them into piles for washing. This occupation is customarily in the hands of men. Some places employ a few women as well as men and a few leave it entirely to women. It is well paid but the task of handling soiled clothing is considered by some employers too unpleasant a one for women. Be this as it may, the preference some have for employing but one sex in this department seems highly commendable.

These piles or sorts go next to the revolving power-driven washing machines which are invariably tended by men. These are situated on a concrete floor which is usually sloped so as to drain the water off and prevent standing pools. Silks and woolens are washed by hand. One woman can attend to this. In some cases she is poorly paid, but in other cases she is a spotter with some facility in handling chemicals and is well paid.

Drying is accomplished by means of extractors which remove the main body of water by centrifugal force. When the clothes leave the extractor they are a hard, compact, damp mass. They then go to the shake-out table where the lowest paid workers separate each piece from the mass, shake it and lay it on a pile or rack. Shaking demands a rather forceful and constant use of the arms, and, except on smaller pieces, of the body from the waist up. It requires continual standing, and is very trying until one becomes accustomed to it. Many women say that for the first few days, until their muscles become used to the strain, they suffer acute pain and are unable to lift their arms to comb their hair when they get home at night. At all times it is hard and fatiguing work. Some laundries in Los Angeles and San Diego employ boys over eighteen on the shaking table. This is sometimes done so that the boys can start working earlier and get the work ready for the women to begin on, and also so that they can finish up any odds and

ends which the girls have to leave when their eight hours are up. They are generally reported not to be steady or to remain any length of time; they are usually paid a little more.

The rack upon which the shaken piles of flat work are hung next go to the mangle feeders, who remove the articles one by one and start them straight upon their journey through the heated rolls. Mangle folders, receiving them as they reappear upon the other side, hot, ironed and steaming, fold and pile them. Mangle folders can sit at their work when small pieces are coming through. In some laundries feeders and folders alternate positions every hour or two in order to give all an equal opportunity to use the seats. This work is not difficult, but at times it is dangerous. A few mangles have an unprotected hot metal roll in very close proximity to the workers' fingers. This not only constitutes a danger, but it also heats the atmosphere near the girls' faces most unnecessarily. Other mangles are equipped with wire guards or with a small protecting roll which can be stopped with a touch of the finger and have none but padded rolls exposed to the outer air. A constant cloud of steam arises from the mangle as the heat is drying the damp articles. Unless a ventilator in the ceiling permits the escape of this steam, it hangs in the air and noticeably heightens the heat and humidity of the room. A certain amount finds its way through the ceiling in old and ill-constructed buildings so that it also affects the temperature and atmosphere of the room above where the ironers are frequently situated. Sometimes so little consideration is given this matter that a platform or false ceiling is suspended above the mangles at a short distance above the girls' heads in order to prevent accidents to the clothing from a careless oiling of the machinery situated above. This platform holds the steam low and prevents it from escaping with normal rapidity.

Starched and fancy work goes from the extractor to the starching and drying rooms. Machines are used very generally for starching. These have corrugated rolls between which the articles pass after having been automatically spread with starch. These rolls rub the starch into the cloth. A few laundries still accomplish this process by hand, which is far more laborious than by machine, as the starcher must rub constantly all day, standing at her work. Starch machine operators can often sit. From the starch room the garments go to the drier. Sometimes they are hung upon racks which are wheeled in and out of the hot room. A more modern device consists of an endless chain upon which the clothes are hung by the girl outside. They then pass through an aperture into the drier, a closet heated to an extraordinarily high temperature. They travel slowly through this and emerge at the other end quite dry. The clothes on coming out are automatically lifted from their hooks and dropped into a rack which then goes to

the sprinkler. Here a girl stands before a tank in which a fine spray is playing. She takes each article and holds it in this spray until it is sufficiently damp to roll and send to the ironer. Collars and cuffs are dampened by small machines constructed for that purpose. Bath towels are dried in a heated revolving cylinder known as a dry tumbler.

Ironing is of two general kinds—machine and hand, and under each of these heads there come minor divisions.

Operators of “body ironers” and “sleevers” stand before two long rolls, one padded and the other of heated metal. They place the shirt or similar garment on the padded roll and by pressing a foot lever revolve the heated roll over the surface. The constant use of this foot lever makes this one of the hardest and most injurious of occupations in a laundry. Furthermore, the hot rolls give off a great heat close to the operators’ faces. This evil feature can be ameliorated by the use of asbestos guards or heat deflectors placed slightly above the roll. These, however, are used in a very few instances. In a few laundries they have installed automatic pressure devices—compressed air or steam. A very slight pressure is sufficient to operate the machine so equipped. Laundrymen who have had them in use consider them satisfactory and say that they are worth the investment. Women in the laundries complain that the heavy pressure required on machines not so equipped causes pelvic and similar disorders.

Press machines iron such things as shirt bosoms, neckbands and cuffs. A felt pad, dried by a constant circulation of air beneath it, has the garment to be ironed stretched firmly across its surface. This is then swung beneath a hot press which is clamped down upon it. In less than a minute the finished article can be removed from the press and its successor swung into place. The operation of the foot lever of these machines sometimes requires not only the pressure of the entire weight of the operator’s body, but a slight jarring jump besides. Collars are ironed in a small collar mangle and are then dampened once again and shaped and finished upon a variety of small machines.

Hand ironing includes the wielding of the huge jumbo iron, ranging from 15 to 30 pounds in weight, the ordinary hand ironing which fancy underwear and ladies’ and children’s waists and dresses require, and finishing. Machine ironed articles have to be gone over by a hand ironer who touches up the places missed by the machine and puts the garment into proper condition for delivery. Most of this work is done by women. A few men are employed for it in many of the larger laundries in order to provide against emergencies when overtime, which women may not work, becomes necessary. A few laundries do not use shirt presses, thinking that hand ironing turns out better work. Men are employed to do the bosom ironing.

Irons are heated either by gas or electricity. The handling of electric irons is far easier on the ironer as there is less lifting to be done and

the irons are usually lighter in weight. Some laundrymen say that the change from gas to electric irons has been accompanied by a marked improvement in the health of the women and has eliminated absences on the part of the women, which had been quite frequent. The additional cost of electric irons was more than made up by this and by the greater cleanliness of the work. Hand ironing is at best a very fatiguing process. The necessity for constant standing, the strain upon the arm, shoulder and back muscles accruing from the constant pushing and pressing of the iron is wearing in the extreme.

Steamstresses and menders repair torn clothing before it goes to the finisher. From the finisher the articles go to the folder; from her to the sorter and tier who does the bundles up ready for the delivery men. She stands at her work. In some laundries several of these processes are omitted, and wet wash plants usually employ no women because they deliver their clothing as it comes from the extractor and the patron does the starching and ironing.

Rough dry laundries deliver the clothing in much the same condition, though they usually put the flat work through the mangle and employ women for that purpose. The working week of women in these laundries is sometimes very short—only four or four and a half days.

Hotel laundries take flat work only, doing no custom work whatever. Shakers, mangers and tiers are the only women they employ. Some flat work plants own their own linen and rent it to hotels and restaurants. Other laundries make a specialty of family trade and consequently do a very small proportion of flat work.

There are very few laundries in which the noise of the power driven machines is not deafeningly loud. In a few places where this necessary roar is at a minimum the nervous tension of the employees is noticeably lessened. It is a noticeable characteristic of quiet, spacious and light, sanitary and well arranged plants that the work goes forward with an ease and assurance that is unknown in less advantageous surroundings. These high class establishments say they are able to obtain and retain the steadiest and most efficient workers.

PLACES OF EMPLOYMENT.

The plants are housed in every conceivable manner. Several are in new buildings erected for such a purpose. These have adequate ventilators in the washroom to carry off the unpleasant odor that characterizes so many places of inferior grade. In these also the walls and ceilings are hard and clean, the light and ventilation are adequate, and the dressing-room accommodations good. In one a system of ventilation has been so perfected as to deserve special note. Fresh air from the roof is forced in large quantities through a spray, which cleans and cools it, into the workrooms at various points. Exhaust fans

remove the steam laden atmosphere and as a result the plant is as fresh and cool as one could wish throughout the entire year. The employees greatly appreciate this remarkable condition, and the management believe that it is a paying investment, for it stands to reason that a comfortable worker who breathes fresh air all day can do more and better work than one who is uncomfortably warm and poisoned with a vitiated, humid atmosphere. The great advantage of new buildings, good lighting, ventilation, etc., is well recognized, and most of the laundries now in leased buildings are trying to figure on new buildings.

Some laundries are housed in old wooden buildings which are dark and ill-ventilated. Some in old stores which have been converted into laundries at a sacrifice of all hope of sanitary surroundings. These places, cramped as they are between other buildings, can never be well arranged, lighted or aired. In many, the hand ironing is done upstairs directly above the washing and mangling room. Into these upper chambers the heat, steam and fumes of the lower rooms ascend, making them unbearably warm and unpleasant.

Laundry work is an occupation in which sanitary surroundings are often of the greatest importance to the worker. The work is always hard and must be doubly trying when performed in super-heated, steam-laden and ill-smelling air, yet there is an equal danger in the sharp and sudden draughts that some laundries abound in. Many places are ill-lighted; this produces an extra and unnecessary strain upon the workers. Some have no cloak rooms, so that the women's outer clothing becomes steam-laden and damp from hanging all day on the walls of the laundry. Only in a few instances did any laundries provide a lunch room or rest room for the employees. At present the women gather in groups about the work rooms, making their tea upon the gas plate and eating at the sorting tables or similar places.

INDIVIDUAL SCHEDULES.

San Francisco Laundries.

Individual schedules were obtained from 665 women employed in laundries in San Francisco. These schedules have been tabulated showing the wages received by these women in relation to their age, marital condition, number of years worked, number of years in present occupation, home condition and schooling; also showing the relation between home condition and age and marital condition, and between nativity and home condition. (Tables 38-47.) The same information has been tabulated for 1167 women employed in the laundries in Los Angeles. (Tables 48-57.)

In San Francisco, the tabulation of the women scheduled showed 6.1 per cent under 18 years; 16.4 per cent, 18 to 21 years; 25.3 per cent, 21 to 25 years, and 52.2 per cent, 25 years and over. (Table 38.)

Single women comprise 43.6 per cent of those scheduled; married, 40.3 per cent; widowed, 9.9 per cent, and divorced, 6.2 per cent. Out of the total of 268 married women, 180 had husbands at home contributing to their support. The marital condition did not have any particular bearing on wages received. It should be noted the large percentage of married women working in laundries as compared with those working in mercantile establishments. (Table 39.)

There is some relation between the experience and wages received, but this is not very marked. (Tables 40-41.)

The figures gathered on home conditions show that 73.2 per cent of the women scheduled were living at home and 26.8 per cent were adrift. The wages of the women adrift were a little higher than those of the women living at home. (Table 42.)

The tabulations do not show a very strong relation between schooling and wages received (Table 43), almost 60 per cent of the women having received less than a grammar school education.

Native born women made up 52.6 per cent of the total number of schedules; foreign born, 47.4 per cent. (Table 46.)

The percentage of women adrift was greater in the native born than in the foreign born, being 65.4 per cent in the former and 35.6 per cent in the latter. (Table 47.)

Los Angeles Laundries.

In Los Angeles, individual schedules were obtained from 1,167 women employed in laundries. Of this number 8.1 per cent were under 21 years; 18.1 per cent, from 18 to 21 years; 18.2 per cent, 21 to 25 years, and 55.6 per cent, 25 years and over. (Table 48.)

Single women comprise 45.8 per cent of those scheduled; married women, 33 per cent; widowed, 12.1 per cent, and divorced, 9.1 per cent. Of the 385 married women, 290 had husbands at home contributing to their support. (Table 49.)

There were no definite relations between experience and wages received, except that after three years there is rather a marked increase. (Tables 50-51.)

Tabulations of the home conditions show that 78.4 per cent of the women scheduled lived at home, while 21.6 per cent were adrift. The wages of the women adrift were a little higher than those living at home. (Table 52.)

As in San Francisco, education had little bearing on wages received. Almost 50 per cent of women employed in laundries had less than a grammar school education. (Table 53.)

Native born women represent 73.2 per cent of the total number and foreign born 26.8 per cent. (Table 56.)

The percentage of women adrift was greater in the native born than in the foreign born.

MANUFACTURING INDUSTRIES.

As stated in the introductory remarks, no attempt has been made in this report to present a complete survey of manufacturing industries. We intend to leave this subject for further investigation and study, particularly the garment manufacturing industry which is practically all piece work. The tabulations presented are only summaries in some of the more important industries employing large numbers of women. (Tables 58-68.)

The tabulations submitted cover 29 establishments manufacturing candy^a and biscuits; 33 establishments preparing food and drug products; 44 printing and bookbinding establishments; 18 establishments manufacturing paper boxes; 11 establishments manufacturing cigars and cigarettes, and 6 establishments manufacturing knit goods^b. These establishments are located in the cities of San Francisco, Los Angeles, Oakland, Sacramento and San Diego. The industries are summarized for each of these cities. (Tables 64-68.)

Of the 926 women 18 years of age and over employed in candy and biscuit manufacturing, 42.4 per cent. received under \$8.00; 50.7 per cent. received under \$9.00, and 71.8 per cent. received under \$10.00 per week. Of the 160 minors employed, 22.5 per cent. received less than \$6.00 per week. (Table 58.)

Of the 1012 adult women employed in the preparation of food and drugs 19.4 per cent. received under \$8.00; 33.9 per cent. under \$9.00, and 45.7 per cent. under \$10.00 per week. Of the 70 minors employed in this industry 18.6 per cent. received under \$6.00 per week. (Table 59.)

Of the 631 women 18 years of age and over employed in printing and bookbinding establishments, 14.7 per cent. received under \$8.00; 28.1 per cent. received under \$9.00, and 41.6 per cent. received under \$10.00 per week. Of the 92 minors employed in this industry 14.1 per cent. received under \$6.00 per week. (Table 60.)

Of the 342 women 18 years of age and over employed in paper box manufacturing establishments 59.4 per cent. received under \$8.00; 69.6 per cent. under \$9.00, and 81.0 per cent. under \$10.00 per week. Of the 87 minors employed in this industry, 35.7 per cent. received under \$6.00 per week. (Table 61.)

Of the 386 women 18 years of age and over employed in the manufacture of cigars and cigarettes 42.1 per cent. received under \$8.00; 53.8 per cent. under \$9.00, and 62.7 per cent. under \$10.00 per week. Of the 59 minors employed in this industry 4.0 per cent. received under \$6.00 per week. (Table 62.)

Of the 259 women 18 years of age and over employed in the manufacture of knit goods, 44.8 per cent. received under \$8.00; 54.9 per cent. under \$9.00, and 69.2 per cent. received under \$10.00 per week. Of the 22 minors employed in this industry 27.2 per cent. received under \$6.00 per week.

^a Wholesale Candy Manufacturing.

TELEPHONE AND TELEGRAPH COMPANIES.

Telephone Companies.

Only summary tables are submitted for women employed in telephone companies. An intensive study of this industry will be made and submitted in a future report. The tabulations extend only to the larger companies, but represent over 90 per cent of the total number of women employed in this industry. The tabulations include women employed throughout the entire state by the companies investigated.

The statistics are submitted for 3,962 women 18 years of age and over and 218 under 18 years of age. They are classified into four occupation groups, namely: office, operators, students, and all others. The operators number 3,421 out of a total of 4,180 women employed. Of the 3,215 women operators 18 years of age and over, 11.2 per cent received less than \$8.00; 18.3 per cent, under \$9.00, and 33.6 per cent, under \$10.00 per week. Of the 196 operators under 18 years of age only 0.5 per cent received less than \$6.00 per week.

Telegraph Companies.

The summary tabulations of employees of telegraph companies cover all of the women employed in the telegraph companies throughout the state, or a total of 372 women 18 years of age and over and 14 under 18 years. These are classified into three occupation groups, namely: office, operators, and all others. Out of the 386 women employed 214 were operators. Of the 208 operators 18 years of age and over, 10.6 per cent received less than \$8.00; 16.8 per cent received less than \$9.00, and 24.5 per cent received less than \$10.00 per week.

From the wage tabulations it can be seen that there is a less per cent of women in the low wage groups in the telephone and telegraph companies than in any other industry investigated.

COST OF LIVING.

The investigations into the cost of living proved very difficult. As previously stated, our attempts to obtain estimates from both employers and employees were unsuccessful. The investigation was finally confined to determining as near as possible the actual expenditures of self-supporting women employed in the various industries. Over 1,000 women adrift were visited in the evenings by investigators. Budgets were prepared covering actual expenditures by the employees during one whole year. These schedules were carefully examined and only those of women who were actually self-supporting, and not receiving outside assistance, were included in the tabulations.

In these tabulations schedules have been classified into two general occupation groups, namely: (1) factory and work room hands, which includes women in laundries; (2) sales, clerical and office employees. The expenditures are shown by wage groups in order to compare expenditures with wages received. The average weekly expenditures are given under three general headings: (1) clothing—total taken from each enumeration of the various articles of clothing used; (2) board, lunches and lodgings; (3) all other expenses—including laundry, repair of clothing, street car fare, medicine and dentistry, insurance, association dues, church and other contributions, newspapers and magazines, vacation expenses and incidentals. (Table 73.) These tabulations must not be taken as conclusive or as showing the cost of proper living. The principal object was to ascertain under what conditions self-supporting women live and their expenditures. The figures are valuable in that they show in a fair way the amount that a woman, who is confronted with the problem of depending entirely on her own resources, is obliged to spend exclusive of emergencies. Some schedules were not included as they showed large expenditures for operations or dental work which had been paid out of previous savings. Separate tables representing San Francisco and Los Angeles. (Tables 71–72.)

Lodgings occupied by the women scheduled and cost of same are submitted. (Tables 74–75.) In addition we have presented tables showing places investigated by the agents of the commission in response to advertisements for board and lodgings. These investigations were made in the cities of San Francisco, Los Angeles, Oakland, Sacramento, and San Diego. (Tables 76–79.)

APPENDIX

MINIMUM WAGE LAW.

Statutes of California, 1913, Chapter 324.

An act regulating the employment of women and minors and establishing an industrial welfare commission to investigate and deal with such employment, including a minimum wage; providing for an appropriation therefor and fixing a penalty for violations of this act.

[Approved May 26, 1913.]

The people of the State of California do enact as follows:

SECTION 1. There is hereby established a commission to be known as the industrial welfare commission, hereinafter called the commission. Said commission shall be composed of five persons, at least one of whom shall be a woman, and all of whom shall be appointed by the governor as follows: two for the term of one year, one for the term of two years, one for the term of three years, and one for the term of four years; *provided, however*, that at the expiration of their respective terms, their successors shall be appointed to serve a full term of four years. Any vacancies shall be similarly filled for the unexpired portion of the term in which the vacancy shall occur. Three members of the commission shall constitute a quorum. A vacancy on the commission shall not impair the right of the remaining members to perform all the duties and exercise all the powers and authority of the commission.

SEC. 2. The members of said commission shall draw no salaries but all of said members shall be allowed ten dollars per diem while engaged in the performance of their official duties. The commission may employ a secretary, and such expert, clerical and other assistants as may be necessary to carry out the purposes of this act, and shall fix the compensation of such employees, and may, also, to carry out such purposes, incur reasonable and necessary office and other expenses, including the necessary traveling expenses of the members of the commission, of its secretary, of its experts, and of its clerks and other assistants and employees. All employees of the commission shall hold office at the pleasure of the commission.

SEC. 3. (a) It shall be the duty of the commission to ascertain the wages paid, the hours and conditions of labor and employment in the various occupations, trades, and industries in which women and minors are employed in the State of California, and to make investigations into the comfort, health, safety and welfare of such women and minors.

(b) It shall be the duty of every person, firm or corporation employing labor in this state:

1. To furnish to the commission, at its request, any and all reports or information which the commission may require to carry out the purposes of this act, such reports and information to be verified by the oath of the person, or a member of the firm, or the president, secretary, or manager of the corporation furnishing the same, if and when so requested by the commission or any member thereof.

2. To allow any member of the commission, or its secretary, or any of its duly authorized experts or employees, free access to the place

of business or employment of such person, firm, or corporation, for the purpose of making any investigation authorized by this act, or to make inspection of, or excerpts from, all books, reports, contracts, pay rolls, documents, or papers, of such person, firm or corporation relating to the employment of labor and payment therefor by such person, firm or corporation.

3. To keep a register of the names, ages, and residence addresses of all women and minors employed.

(c) For the purposes of this act, a minor is defined to be a person of either sex under the age of eighteen years.

SEC. 4. The commission may specify times to hold public hearings, at which times, employers, employees, or other interested persons, may appear and give testimony as to the matter under consideration. The commission or any member thereof shall have power to subpoena witnesses and to administer oaths. All witnesses subpoenaed by the commission shall be paid the fees and mileage fixed by law in civil cases. In case of failure on the part of any person to comply with any order of the commission or any member thereof, or any subpoena, or upon the refusal of any witness to testify to any matter regarding which he may lawfully be interrogated before any wage board or the commission, it shall be the duty of the superior court or the judge thereof, on the application of a member of the commission, to compel obedience in the same manner, by contempt proceedings or otherwise, that such obedience would be compelled in a proceeding pending before said court. The commission shall have power to make and enforce reasonable and proper rules of practice and procedure and shall not be bound by the technical rules of evidence.

SEC. 5. If, after investigation, the commission is of the opinion that, in any occupation, trade, or industry, the wages paid to women and minors are inadequate to supply the cost of proper living, or the hours or conditions of labor are prejudicial to the health, morals or welfare of the workers, the commission may call a conference, hereinafter called "wage board," composed of an equal number of representatives of employers and employees in the occupation, trade, or industry in question, and a representative of the commission to be designated by it, who shall act as the chairman of the wage board. The members of such wage board shall be allowed five dollars per diem and necessary traveling expenses while engaged in such conferences. The commission shall make rules and regulations governing the number and selection of the members and the mode of procedure of such wage board, and shall exercise exclusive jurisdiction over all questions arising as to the validity of the procedure and of the recommendations of such wage board. The proceedings and deliberations of such wage board shall be made a matter of record for the use of the commission, and shall be admissible as evidence in any proceedings before the commission. On request of the commission, it shall be the duty of such wage board to report to the commission its findings, including therein:

1. An estimate of the minimum wage adequate to supply to women and minors engaged in the occupation, trade or industry in question, the necessary cost of proper living and to maintain the health and welfare of such women and minors.

2. The number of hours of work per day in the occupation, trade or industry in question, consistent with the health and welfare of such women and minors.

3. The standard conditions of labor in the occupation, trade or industry in question, demanded by the health and welfare of such women and minors.

SEC. 6. (a) The commission shall have further power after a public hearing had upon its own motion or upon petition, to fix:

1. A minimum wage to be paid to women and minors engaged in any occupation, trade or industry in this state, which shall not be less than a wage adequate to supply to such women and minors the necessary cost of proper living and to maintain the health and welfare of such women and minors.

2. The maximum hours of work consistent with the health and welfare of women and minors engaged in any occupation, trade or industry in this state; *provided*, that the hours so fixed shall not be more than the maximum now or hereafter fixed by law.

3. The standard conditions of labor demanded by the health and welfare of the women and minors engaged in any occupation, trade or industry in this state.

(b) Upon the fixing of a time and place for the holding of a hearing for the purpose of considering and acting upon any matters referred to in subsection (a) hereof, the commission shall give public notice by advertisement in at least one newspaper published in each of the cities of Los Angeles and Sacramento and in the city and county of San Francisco, and by mailing a copy of said notice to the county recorder of each county in the state, of such hearing and purpose thereof, which notice shall state the time and place fixed for such hearing, which shall not be earlier than fourteen days from the date of publication and mailing of such notices.

(c) After such public hearing, the commission may, in its discretion, make a mandatory order to be effective in sixty days from the making of such order, specifying the minimum wage for women or minors in the occupation in question, the maximum hours; *provided*, that the hours specified shall not be more than the maximum for women or minors in California, and the standard conditions of labor for said women or minors; *provided, however*, that no such order shall become effective until after April 1, 1914. Such order shall be published in at least one newspaper in each of the cities of Los Angeles and Sacramento and in the city and county of San Francisco, and a copy thereof be mailed to the county recorder of each county in the state, and such copy shall be recorded without charge, and to the labor commissioner who shall send by mail, so far as practicable, to each employer in the occupation in question, a copy of the order, and each employer shall be required to post a copy of such order in the building in which women or minors affected by the order are employed. Failure to mail notice to the employer shall not relieve the employer from the duty to comply with such order. Finding by the commission that there has been such publication and mailing to county recorders shall be conclusive as to service.

SEC. 7. Whenever wages, or hours, or conditions of labor have been so made mandatory in any occupation, trade, or industry, the commission may at any time in its discretion, upon its own motion or upon

petition of either employers or employees, after a public hearing held upon the notice prescribed for an original hearing, rescind, alter or amend any prior order. Any order rescinding a prior order shall have the same effect as herein provided for in an original order.

SEC. 8. For any occupation in which a minimum wage has been established, the commission may issue to a woman physically defective by age or otherwise, a special license authorizing the employment of such licensee, for a period of six months, for a wage less than such legal minimum wage; and the commission shall fix a special minimum wage for such person. Any such license may be renewed for like periods of six months.

SEC. 9. Upon the request of the commission, the labor commissioner shall cause such statistics and other data and information to be gathered, and investigations made, as the commission may require. The cost thereof shall be paid out of the appropriations made for the expenses of the commission.

SEC. 10. Any employer who discharges, or threatens to discharge, or in any other manner discriminates against any employee because such employee has testified or is about to testify, or because such employer believes that said employee may testify in any investigation or proceedings relative to the enforcement of this act, shall be deemed guilty of a misdemeanor.

SEC. 11. The minimum wage for women and minors fixed by said commission as in this act provided, shall be the minimum wage to be paid to such employees, and the payment to such employees of a less wage than the minimum so fixed shall be unlawful, and every employer or other person who, either individually or as an officer, agent, or employee of a corporation or other person, pays or causes to be paid to any such employee a wage less than such minimum, shall be guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not less than fifty dollars, or by imprisonment for not less than thirty days, or by both such fine and imprisonment.

SEC. 12. In every prosecution for the violation of any provision of this act, the minimum wage established by the commission as herein provided shall be *prima facie* presumed to be reasonable and lawful, and to be the living wage required herein to be paid to women and minors. The findings of fact made by the commission acting within its powers shall, in the absence of fraud, be conclusive; and the determination made by the commission shall be subject to review only in a manner and upon the grounds following: within twenty days from the date of the determination, any party aggrieved thereby may commence in the superior court in and for the city and county of San Francisco, or in and for the counties of Los Angeles or Sacramento, an action against the commission for review of such determination. In such action a complaint, which shall state the grounds upon which a review is sought, shall be served with the summons. Service upon the secretary of the commission, or any member of the commission, shall be deemed a complete service. The commission shall serve its answer within twenty days after the service of the complaint. With its answer, the commission shall make a return to the court of all documents and papers on file in the matter, and of all testimony and evidence which may have been taken before it, and of its findings and the determination. The

action may thereupon be brought on for hearing before the court upon such record by either party on ten days' notice of the other. Upon such hearing, the court may confirm or set aside such determination; but the same shall be set aside only upon the following grounds:

- (1) That the commission acted without or in excess of its powers.
- (2) That the determination was procured by fraud.

Upon the setting aside of any determination the court may recommit the controversy and remand the record in the case to the commission for further proceedings. The commission, or any party aggrieved, by a decree entered upon the review of a determination, may appeal therefrom within the time and in the manner provided for an appeal from the orders of the said superior court.

SEC. 13. Any employee receiving less than the legal minimum wage applicable to such employee shall be entitled to recover in a civil action the unpaid balance of the full amount of such minimum wage, together with costs of suit, notwithstanding any agreement to work for such lesser wage.

SEC. 14. Any person may register with the commission a complaint that the wages paid to an employee for whom a living rate has been established, are less than that rate, and the commission shall investigate the matter and take all proceedings necessary to enforce the payment of a wage not less than the living wage.

SEC. 15. The commission shall biennially make a report to the governor and the state legislature of its investigations and proceedings.

SEC. 16. There is hereby appropriated annually out of the moneys of the state treasury, not otherwise appropriated, the sum of fifteen thousand dollars, to be used by the commission in carrying out the provisions of this act, and the controller is hereby directed from time to time to draw his warrants on the general fund in favor of the commission for the amounts expended under its direction, and the treasurer is hereby authorized and directed to pay the same.

SEC. 17. The commission shall not act as a board of arbitration during a strike or lockout.

SEC. 18. (a) Whenever this act, or any part or section thereof, is interpreted by a court, it shall be liberally construed by such court.

(b) If any section, subsection, or subdivision of this act is for any reason held to be unconstitutional, such decision shall not affect the validity of the remaining portions of this act. The legislature hereby declares that it would have passed this act, and each section, subsection, subdivision, sentence, clause and phrase thereof, irrespective of the fact that any one or more sections, subsections, subdivisions, sentences, clauses or phrases is declared unconstitutional.

SEC. 19. The provisions of this act shall apply to and include women and minors employed in any occupation, trade or industry, and whose compensation for labor is measured by time, piece or otherwise.

CONSTITUTIONAL AMENDMENT.

Adopted at General Election, November 3, 1914.

ARTICLE XX.

SECTION 17 $\frac{1}{2}$. The legislature may, by appropriate legislation, provide for the establishment of a minimum wage for women and minors and may provide for the comfort, health, safety and general welfare of any and all employees. No provision of this constitution shall be construed as a limitation upon the authority of the legislature to confer upon any commission now or hereafter created such power and authority as the legislature may deem requisite to carry out the provisions of this section.

ANNUAL REPORT

OF THE

California

Stallion Registration Board

FOR THE

Year Ending July 31, 1913

FRIEND WM. RICHARDSON, SUPERINTENDENT OF STATE PRINTING

SACRAMENTO, CALIFORNIA

1913

STALLION REGISTRATION BOARD. · 1913.

DIRECTORS.

A. L. SCOTT-----*President*
DR. CHAS. KEANE-----*State Veterinarian*
J. L. McCARTHY-----*Secretary*

LETTER OF TRANSMITTAL.

CALIFORNIA STALLION REGISTRATION BOARD,
SACRAMENTO, November 25, 1913.

To his Excellency, HIRAM W. JOHNSON, Governor of California:

SIR: In accordance with the provisions of chapter 677, "An act to regulate the public service of stallions and jacks in the State of California," we have the honor to submit herewith our second annual report for the twelve months ending July 31, 1913, together with a financial statement showing the receipts and expenditures of the Board during that period.

Laws for the regulation of horse breeding on scientific lines have long been advocated by the best authorities, but it is only within the last seven years that a serious attempt has been made to secure a larger supply of well-bred horses of recognized breeds, the first step in this direction being taken by the State of Wisconsin in 1896. Since then each year has seen an advance in the number of states joining in this important movement, and at the present time eighteen have enacted stallion registration laws.

The California law provides that the Board shall publish bulletins, with a view to encourage the horse breeding interests in the State, and to disseminate information pertaining to horse breeding. This will give an opportunity to review the working of the law, and to point out certain amendments that experience has shown to be necessary in order that the work may be carried on with the best possible results.

Respectfully submitted.

A. L. SCOTT, President.
California Stallion Registration Board.

SECTION 10. Every association, person, firm or corporation violating any of the provisions of this act, shall be guilty of a misdemeanor, and shall be punished by a fine not exceeding one hundred dollars (\$100) for each offense; or by imprisonment in the county jail not exceeding fifty days, or by both such fine and imprisonment.

SECOND ANNUAL REPORT

OF THE

CALIFORNIA STALLION REGISTRATION BOARD.

Within the past seven years eighteen different states have passed laws requiring that all owners of stallions or jacks, before standing them for public service, shall obtain a license for each animal from the State Board created for that purpose. This board examines all pedigree certificates and veterinarians' certificates of soundness submitted, and enrolls and issues license certificates for all stallions and jacks entitled to such enrollment in accordance with the law. Such legislation has been enacted in the following states:

States.	Act effective.	States.	Act effective.
Wisconsin -----	January 1, 1903	Illinois -----	January 1, 1910
Iowa -----	March 30, 1907	North Dakota -----	January 1, 1910
Minnesota -----	April 25, 1907	Kansas -----	April 3, 1910
Utah -----	May 13, 1907	Washington -----	June 8, 1910
Pennsylvania -----	January 1, 1908	Oregon -----	May 20, 1911
New Jersey -----	September 1, 1908	Nebraska -----	July 7, 1911
Montana -----	March 8, 1909	California -----	August 1, 1911
South Dakota -----	March 9, 1909	Michigan -----	August 1, 1911
Idaho -----	March 15, 1909	Colorado -----	August 5, 1911

The details of these laws vary somewhat in different states, but all are more or less founded on the Wisconsin act, which was the pioneer state in this matter, but all require the submission of certificates of registration in studbooks certified by the United States Department of Agriculture, as evidence of the purity of breeding of stallions licensed as purebred, except that some provide in addition that stallions shall be accepted as purebred which are registered in studbooks of any American studbook or registry association which recognizes and records stallions having five pure top crosses.

That the State stallion law marks a distinct step in advance in our horse-breeding industry is hardly to be questioned. One of the first results of the operation of these laws was to provide data which show the actual facts with regard to the stallions being used for breeding purposes. Other important beneficial results are the rapid elimination of unfit animals and greater care with regard to breeding and registration. Under authority of paragraph 492 of the act of Congress, approved August 5, 1909, the following regulations were issued by the United States Department of Agriculture regarding the importation of animals for breeding purposes, in order to prevent fraud concerning the ancestry of purebred animals, which became effective on February 1, 1912.

Recognized Foreign Breeds.

The following breeds of horses have been certified to the Secretary of the Treasury as recognized breeds and books of record across the seas:

Name of breed	Book of record	By whom published
Belgian Draft -----	Stud Book des Chevaux de Trait Belges.	Société le Cheval de Trait Belge, Chevalier G. Hynderick, secretary, 20 Rue Royale, Brussels, Belgium.
Clydesdale -----	Clydesdale Studbook ----	Clydesdale Horse Society of the United Kingdom of Great Britain and Ireland, Arhibald McNeilage, secretary, 93 Hope street, Glasgow, Scotland.
French Draft -----	Studbook des Chevaux de Trait Français.	Société des Agriculteurs de France, J. C. Villevas, secretary, 8 Rue d'Athenes, Paris, France.
Hackney -----	Hackney Studbook -----	Hackney Horse Society, Frank F. Euren, secretary, 12 Hanover Square, London, W., England.
Percheron -----	Studbook Percheron de France.	La Société Hippique Percheronne de France, E. Lemarie, secretary, Nogent-le-Rotrou, France.
Shetland Pony -----	Shetland Pony Studbook--	Shetland Pony Studbook Society, R. W. Walker, secretary, 3 Golden Square, Aberdeen, Scotland.
Shire -----	Shire Horse Society Studbook.	Shire Horse Society, J. Sloughgrove, secretary, 12 Hanover Square, London, W., England.
Suffolk -----	Suffolk Studbook -----	Suffolk Horse Society, Fred Smith, secretary, Rendlesham, Woodbridge, Suffolk, England.
Thoroughbred -----	Australian Studbook ----- Provided that no animal or animals registered in the Australian Studbook shall be certified as purebred unless such animal or animals trace, in all crosses, to animals registered in the General Studbook of England.	Australian Jockey Club and Victoria Racing Club, A. P. Wilson, keeper, 6 Bligh street, Sydney, New South Wales.
Welsh Pony and Cob----	Welsh Pony and Cob Studbook.	Weatherby & Sons, 6 Old Burlington street, London, W., England. The Welsh Pony and Cob Society, John R. Bache, secretary, Knighton, Radnorshire, Wales.

Recognized breeds and books of record in Canada.—The Canadian National Records are recognized for the following breeds, provided that no animal or animals registered in the Canadian National Records shall be certified by the Secretary of Agriculture as purebred unless such animal or animals trace, in all crosses, to registered animals in the country where the breed originated, or to animals which are proved to the satisfaction of the department to be of the same breed and which have been imported from the country in which the breed originated:

Belgian Draft.
Clydesdale.
Hackney.
Shire.

Standardbred.
Suffolk.
Thoroughbred.
Welsh Pony and Cob.

The complete act to regulate the public service of stallions and jacks in California is given in full in Appendix D, as it will be found useful for reference by those concerned.

In Appendix B the various breeds are given in detail, and the numbers are of considerable interest. No pony-stallions have been registered.

The following summary shows the changes that have taken place during the year:

	Number			Number	
	1912	1913		1912	1913
Mongrel -----	766	707	Crossbred -----	10	6
Percheron -----	419	463	Norman -----	3	5
Standard -----	165	279	Non-Standard -----	2	4
American Trotter -----	150	2	Hackney -----	2	4
Belgian -----	146	159	Suffolk -----	1	1
Shire -----	94	88	Cleveland Bay -----	1	1
German Coach -----	65	53	Not classified -----		13
French Draft -----	57	57			
Clydesdale -----	29	33	Total -----	1,957	1,920
French Coach -----	26	23	Jacks -----	77	358
Thoroughbred -----	11	15			
American Saddle -----	10	7	Grand total -----	2,034	2,278

The total number of registered stallions in the State is 1,920, a decrease of 37 compared with last year. On the other hand, the number of jacks registered shows the remarkable increase of 281, the number being 358, compared with 77 last year. There are 707 classed as mongrels, a decrease of 59 during the year, which is satisfactory. The principal breeds are Percheron, Standard, and Belgium in the order named. Only two counties have more than one hundred stallions—San Joaquin 121, and Fresno 109, Tulare being third with 99.

APPENDIX D.

THE CALIFORNIA STALLION REGISTRATION LAW.

CHAPTER 677.

An act to regulate the public service of stallions and jacks in the State of California.

[Approved May 1, 1911.]

The people of the State of California, represented in senate and assembly, do enact as follows:

SECTION 1. Every association, person, firm or corporation standing or offering any stallion or jack for public service in this state shall cause the name, description, and pedigree of such stallion or jack to be enrolled by a stallion registration board hereinafter provided for, and secure a license from said board, as provided in section 3 of this act. All enrollment and verification of pedigree shall be done in the office of the secretary of the California state board of agriculture. All license certificates for stallions or jacks issued under this act shall thereupon be presented to and recorded by the county recorder of the county or counties in which said stallion or jack is used for public service.

SEC. 2. In order to carry out the provisions of this act, there shall be constituted a stallion registration board, whose duty it shall be to verify and register pedigrees; to pass upon certificates of veterinary examination; to provide, when necessary, for veterinary inspection; to issue stallion or jack license certificates; to make all necessary rules and regulations; and to perform such other duties as may be necessary to carry out and enforce the provisions of this act. Said board shall hold meetings at the office of the secretary of the California state board of agriculture the first Tuesday and subsequent days of February, May, August, and November of each year, and such other meetings as may be necessary. Said stallion registration board shall be composed of three members, consisting of the president and the secretary of the California state board of agriculture and the state veterinarian.

SEC. 3. In order to obtain the license certificate herein provided for, the owner of each stallion or jack shall forward an affidavit signed by a licensed veterinarian to the effect that he has personally examined such stallion or jack, and that, to the best of his knowledge and belief, said stallion or jack is free from hereditary, infectious, contagious, or transmissible disease or unsoundness. The owner of said stallion or jack shall also furnish to the stallion registration board the stud-book certificate of registry of the pedigree of said stallion or jack when said stallion or jack is registered, and all other necessary papers relative to his breeding and ownership. Upon verification of pedigree and certificate of breeding (in case of pure-bred stallions and jacks), and receipt of veterinarian's affidavit, as provided for in this act, a license certificate shall be issued to the owner.

SEC. 4. The presence of any one of the following named diseases shall disqualify a stallion or jack for public service, and the examining

or inspecting veterinarian is hereby duly authorized to refuse to give an affidavit of soundness to the owner of such stallions or jacks affected with any one or more of the diseases herein specified in a transmissible or hereditary form, and the examining or inspecting veterinarian shall so report the same to the secretary of the stallion registration board. Laryngeal hemiplegia, (roaring or whistling); pulmonary emphysema, (heaves, broken wind); chorea, (St. Vitus' dance, crampiness, shivering, stringhalt); bone spavin; ringbone; sidebone; navicular disease; osteoporosis; curb, when accompanied with faulty conformation of hock; glanders, farcy; maladie du coit; urethral gleet; mange; or any contagious or infectious disease, and the said board is hereby authorized to refuse its certificates of enrollment for any stallion or jack affected with any one of the diseases herein above mentioned and to revoke the previously issued enrollment certificate of any stallion or jack found on subsequent examination and investigation to be so affected.

SEC. 5. The stallion registration board shall make and keep records of all stallions and jacks enrolled in the State of California; said stallions or jacks to be enrolled as "pure-bred," "cross-bred," "non-standard bred," "grade," or "mongrel," according as the facts may have been determined. Upon making the enrollment of said stallion or jack, said stallion registration board shall issue the above said license. The stallion registration board is authorized, in cases of emergency, to grant temporary license certificates without veterinary examination, upon receipt of an affidavit of the owner to the effect that, to the best of his knowledge and belief, said stallion or jack is free from infectious, contagious, or transmissible disease or unsoundness. Temporary license certificate shall be valid only until veterinary examination can reasonably be made.

SEC. 6. The owner of any stallion or jack used for public service in this state shall post and keep affixed, during the entire breeding season, copies of the license certificate of such stallion or jack, issued under the provisions of this act, in a conspicuous place, both within and upon the outside of the main door leading to every stable or building where the said stallion or jack is used for public service. Each bill and poster and each newspaper advertisement shall show the enrollment certificate number, and state whether it reads "pure-bred," "grade," "cross-bred," "non-standard bred" or "mongrel," and it shall be illegal to print or advertise any misleading reference to the breeding of said stallion or jack, his dam or his sire.

SEC. 7. The license certificate issued for a stallion or jack whose sire and dam are of pure breeding, and the pedigree of which is registered in a studbook recognized by the United States department of agriculture, Washington, D. C., an act regulating the importation of breeding animals, approved March 3, 1903, shall be in the following form.*

SEC. 8. A fee of two dollars and fifty cents shall be paid to the secretary of the California stallion registration board for the examination and enrollment of each stallion or jack pedigree, and for issuance of a license certificate in accordance with the breeding of the stallion or jack as above provided, which shall be in force and effect for a

*See page 73.

period of one year from its date, and for the purpose of carrying out the provisions of this act. The fee shall be paid to the secretary of the California stallion registration board at the time the application is made for enrollment. Upon a transfer of the ownership of any stallion or jack enrolled under the provisions of this act, the certificate of enrollment may be transferred to the transferee by the secretary of the California stallion registration board, upon submittal of satisfactory proof of such transfer of ownership, and upon payment of a fee of one dollar. A fee of one dollar shall be paid annually for the renewal of a license certificate. A fee of one dollar shall be paid for a duplicate license certificate, upon proof of the loss or destruction of the original certificate.

SEC. 9. Every stallion or jack for which a license has been issued shall be exempt from further examination, unless from later developments it becomes known, and a complaint is filed, certified to by three men, one of whom shall be [a] licensed veterinarian, that said stallion or jack has some hereditary, contagious, or infectious disease which was not evident at the time of previous examination. When such complaint is made, and a request for examination is asked, such complaint shall be filed with the secretary of the California stallion registration board, who shall have another examination made, but the owner of the stallion or jack shall have the right to select a veterinarian legally qualified to practice as such in this state, to act with such examining veterinary, and in case these two shall fail to agree upon a verdict or decision these two veterinarians shall appoint a third qualified veterinarian, with the consent and approval of said board and owner, who shall act as referee therein, and the decision of said referee shall be final. If such complaint shall be found to be correct it shall be so reported to the secretary, who shall revoke the license in force; *provided*, that the owner of any stallion used for public service in this state shall have a lien on all colts sired by said stallion for the service fee for a period of one year from the date of the foaling of said colt, as now provided by law.

SEC. 10. *Every association, person, firm or corporation violating any of the provisions of this act, shall be guilty of a misdemeanor, and shall be punished by a fine not exceeding one hundred dollars (\$100) for each offense; or by imprisonment in the county jail not exceeding fifty days, or by both such fine and imprisonment.*

SEC. 11. The funds accruing from the above named fees shall be used by the said stallion registration board to defray the expenses of enrollment of pedigrees and issuance of licenses; to provide for the examination of stallions and jacks when necessary; to publish reports or bulletins containing lists of stallions and jacks examined, which shall be not less than one in each year; to encourage the horse breeding interests in this state; to disseminate information pertaining to horse breeding, and for any other purposes as may be necessary to carry out the purposes and enforce the provisions of this act. Each member of the above committee shall receive his actual expenses incurred while in the performance of any duty imposed under the provisions of this act; the secretary of said board shall receive for his services an amount to be fixed and agreed upon by said board. It shall be the duty of the said stallion registration board to enforce the

provisions of this act, and to make an annual report, including financial statement, to the governor of the state on September 15th of each year.

SEC. 12. This act shall take effect and be in force on August 1st, 1911.

LETTER OF TRANSMITTAL.

CALIFORNIA STALLION REGISTRATION BOARD,
SACRAMENTO, January 8, 1915.

To his Excellency, HIRAM W. JOHNSON, Governor of California:

SIR: In accordance with the provisions of chapter 677, "An act to regulate the public service of stallions and jacks in the State of California," we have the honor to submit herewith our third annual report for the twelve months ending July 31, 1914, together with a financial statement showing the receipts and expenditures of the Board during that period, and with a statistical summary of the various breeds.

Respectfully submitted,

A. L. SCOTT, President.
CHARLES KEANE.
CHAS. W. PAINE.

THIRD ANNUAL REPORT
OF THE
CALIFORNIA STALLION REGISTRATION BOARD.

Within the past eight years twenty different states have passed laws requiring that all owners of stallions or jacks, before standing them for public service, shall obtain a license for each animal from the State Board created for that purpose. This board examines all pedigree certificates and veterinarians' certificates of soundness submitted, and enrolls and issues license certificates for all stallions and jacks entitled to such enrollment in accordance with the law. Such legislation has been enacted in the following states:

States	Act effective	States	Act effective
Wisconsin -----	January 1, 1906	Illinois -----	January 1, 1910
Iowa -----	March 30, 1907	North Dakota -----	January 1, 1910
Minnesota -----	April 25, 1907	Kansas -----	April 3, 1910
Utah -----	May 13, 1907	Washington -----	June 8, 1910
Pennsylvania -----	January 1, 1908	Oregon -----	May 20, 1911
New Jersey -----	September 1, 1908	Nebraska -----	July 7, 1911
Montana -----	March 8, 1909	California -----	August 1, 1911
South Dakota -----	March 9, 1909	Michigan -----	August 1, 1911
Idaho -----	March 15, 1909	Colorado -----	August 5, 1911
Indiana -----		Ohio -----	

The details of these laws vary somewhat in different states, but all are more or less founded on the Wisconsin act, which was the pioneer state in this matter, but all require the submission of certificates of registration in studbooks certified by the United States Department of Agriculture, as evidence of the purity of breeding of stallions licensed as purebred, except that some provide in addition that stallions shall be accepted as purebred which are registered in studbooks of any American studbook or registry association which recognizes and records stallions having five pure top crosses.

That the State stallion law marks a distinct step in advance in our horse-breeding industry is hardly to be questioned. One of the first results of the operation of these laws was to provide data which show the actual facts with regard to the stallions being used for breeding purposes. Other important beneficial results are the rapid elimination of unfit animals and greater care with regard to breeding and registration. Under authority of paragraph 492 of the act of Congress, approved August 5, 1909, the following regulations were issued by the United States Department of Agriculture regarding the importation of animals for breeding purposes, in order to prevent fraud concerning the ancestry of purebred animals, which became effective on February 1, 1912.

Recognized Foreign Breeds.

The following breeds of horses have been certified to the Secretary of the Treasury as recognized breeds and books of record across the seas:

Name of breed	Book of record	By whom published
Belgian Draft -----	Stud Book des Chevaux de Trait Belges.	Société le Cheval de Trait Belge, Chevalier G. Hynderick, secretary, 20 Rue Royale, Brussels, Belgium.
Clydesdal -----	Clydesdale Studbook ----	Clydesdale Horse Society of the United Kingdom of Great Britain and Ireland, Archibald McNeillage, secretary, 93 Hope street, Glasgow, Scotland.
French Draft -----	Studbook des Chevaux de Trait Français.	Société des Agriculteurs de France, J. C. Villevas, secretary, 8 Rue d'Athènes, Paris, France.
Hackney -----	Hackney Studbook -----	Hackney Horse Society, Frank F. Euren, secretary, 12 Hanover Square, London, W., England.
Percheron -----	Studbook Percheron de France.	La Société Hippique Percheronne de France, E. Lemarie, secretary, Nogent-le-Rotrou, France.
Shetland Pony -----	Shetland Pony Studbook..	Shetland Pony Studbook Society, R. W. Walker, secretary, 3 Golden Square, Aberdeen, Scotland.
Shire -----	Shire Horse Society Studbook.	Shire Horse Society, J. Sloughgrove, secretary, 12 Hanover Square, London, W., England.
Suffolk -----	Suffolk Studbook -----	Suffolk Horse Society, Fred Smith, secretary, Rendlesham, Woodbridge, Suffolk, England.
Thoroughbred -----	Australian Studbook ----- Provided that no animal or animals registered in the Australian Studbook shall be certified as purebred unless such animal or animals trace, in all crosses, to animals registered in the General Studbook of England.	Australian Jockey Club and Victoria Racing Club, A. P. Wilson, keeper, 6 Bligh street, Sydney, New South Wales.
Welsh Pony and Cob----	Welsh Pony and Cob Studbook.	Weatherby & Sons, 6 Old Burlington street, London, W., England. The Welsh Pony and Cob Society, John R. Bache, secretary, Knighton, Radnorshire, Wales.

Recognized breeds and books of record in Canada.—The Canadian National Records are recognized for the following breeds, provided that no animal or animals registered in the Canadian National Records shall be certified by the Secretary of Agriculture as pure-bred unless such animal or animals trace, in all crosses, to registered animals in the country where the breed originated, or to animals which are proved to the satisfaction of the department to be of the same breed and which have been imported from the country in which the breed originated:

Belgian Draft.	Standardbred.
Clydesdale.	Suffolk.
Hackney.	Thoroughbred.
Shire.	Welsh Pony and Cob.

The complete act to regulate the public service of stallions and jacks in California is given in full in Appendix D, as it will be found useful for reference by those concerned.

In Appendix B the various breeds are given in detail, and the

numbers are of considerable interest. No pony-stallions have been registered.

The total number of registered stallions in the state is 1551, principally classified as follows:

Mongrel, 547; Percheron, 410; Standard, 201; Belgian, 138; showing a decrease of 369 under last year.

The three leading counties are San Joaquin, with 101; Alameda with 91, and Fresno with 85 stallions.

SUMMARY.

Breed	Number		
	1912	1913	1914
Arab -----			1
Belgian -----	146	159	138
Cleveland Bay -----	1	1	
Clydesdale -----	29	33	25
Crossbred -----	10	6	2
French Coach -----	26	23	21
French Draft -----	57	57	48
German Coach -----	65	53	29
Hackney -----	2	4	3
Mongrel -----	766	707	547
Non-standard -----	2	4	3
Norman -----	3	5	4
Percheron -----	419	463	410
Saddle -----	10	7	8
Shire -----	94	88	71
Standard -----	165	279	208
Suffolk -----	1	1	1
Thoroughbred -----	11	15	8
Trotter -----	150	2	
Welsh Pony -----			
Not classified -----		13	24
Totals -----	1,957	1,920	1,552
Jacks -----	77	358	111
Grand totals -----	2,034	2,278	1,663

While the extensive use of the automobile and traction engine has no doubt been the primary factor in this large decrease, yet, on the other hand, the published graded registration of the California Stallion Registration Board, has had a tendency to promote better breeding, thus carrying out the purport of the law.

STALLION REGISTRATION BOARD,

A. L. SCOTT.

APPENDIX D.

THE CALIFORNIA STALLION REGISTRATION LAW.

CHAPTER 677.

An act to regulate the public service of stallions and jacks in the State of California.

[Approved May 1, 1911.]

The people of the State of California, represented in senate and assembly, do enact as follows:

SECTION 1. Every association, person, firm or corporation standing or offering any stallion or jack for public service in this state shall cause the name, description, and pedigree of such stallion or jack to be enrolled by a stallion registration board hereinafter provided for, and secure a license from said board, as provided in section 3 of this act. All enrollment and verification of pedigree shall be done in the office of the secretary of the California state board of agriculture. All license certificates for stallions or jacks issued under this act shall thereupon be presented to and recorded by the county recorder of the county or counties in which said stallion or jack is used for public service.

SEC. 2. In order to carry out the provisions of this act, there shall be constituted a stallion registration board, whose duty it shall be to verify and register pedigrees; to pass upon certificates of veterinary examination; to provide, when necessary, for veterinary inspection; to issue stallion or jack license certificates; to make all necessary rules and regulations; and to perform such other duties as may be necessary to carry out and enforce the provisions of this act. Said board shall hold meetings at the office of the secretary of the California state board of agriculture the first Tuesday and subsequent days of February, May, August, and November of each year, and such other meetings as may be necessary. Said stallion registration board shall be composed of three members, consisting of the president and the secretary of the California state board of agriculture and the state veterinarian.

SEC. 3. In order to obtain the license certificate herein provided for, the owner of each stallion or jack shall forward an affidavit signed by a licensed veterinarian to the effect that he has personally examined such stallion or jack, and that, to the best of his knowledge and belief, said stallion or jack is free from hereditary, infectious, contagious, or transmissible disease or unsoundness. The owner of said stallion or jack shall also furnish to the stallion registration board the stud-book certificate of registry of the pedigree of said stallion or jack when said stallion or jack is registered, and all other necessary papers relative to his breeding and ownership. Upon verification of pedigree and certificate of breeding (in case of pure bred stallions and jacks), and receipt of veterinarian's affidavit, as provided for in this act, a license certificate shall be issued to the owner.

SEC. 4. The presence of any one of the following named diseases shall disqualify a stallion or jack for public service, and the examining or inspecting veterinarian is hereby duly authorized to refuse to give an affidavit of soundness to the owner of such stallions or jacks affected with any one or more of the diseases herein specified in a transmissible

or hereditary form, and the examining or inspecting veterinarian shall so report the same to the secretary of the stallion registration board. Laryngeal hemiplegia, (roaring or whistling); pulmonary emphysema, (heaves, broken wind); chorea, (St. Vitus' dance, crampiness, shivering, stringhalt); bone spavin; ringbone; sidebone; navicular disease; osteoporosis; curb, when accompanied with faulty conformation of hock; glanders; farcy; maladie du coit; urethral gleet; mange; or any contagious or infectious disease, and the said board is hereby authorized to refuse its certificates of enrollment for any stallion or jack affected with any one of the diseases hereinabove mentioned and to revoke the previously issued enrollment certificate of any stallion or jack found on subsequent examination and investigation to be so affected.

SEC. 5. The stallion registration board shall make and keep records of all stallions and jacks enrolled in the State of California; said stallions or jacks to be enrolled as "pure bred," "cross bred," "non-standard bred," "grade," or "mongrel," according as the facts may have been determined. Upon making the enrollment of said stallion or jack said stallion registration board shall issue the above said license. The stallion registration board is authorized, in cases of emergency, to grant temporary license certificates without veterinary examination, upon receipt of an affidavit of the owner to the effect that, to the best of his knowledge and belief, said stallion or jack is free from infectious, contagious, or transmissible disease or unsoundness. Temporary license certificate shall be valid only until veterinary examination can reasonably be made.

SEC. 6. The owner of any stallion or jack used for public service in this state shall post and keep affixed, during the entire breeding season, copies of the license certificate of such stallion or jack, issued under the provisions of this act, in a conspicuous place, both within and upon the outside of the main door leading to every stable or building where the said stallion or jack is used for public service. Each bill and poster and each newspaper advertisement shall show the enrollment certificate number, and state whether it reads "pure bred," "grade," "cross bred," "non-standard bred," or "mongrel," and it shall be illegal to print or advertise any misleading reference to the breeding of said stallion or jack, his dam or his sire.

SEC. 7. The license certificate issued for a stallion or jack whose sire and dam are of pure breeding, and the pedigree of which is registered in a studbook recognized by the United States department of agriculture, Washington, D. C., an act regulating the importation of breeding animals, approved March 3, 1903, shall be in the following form.*

SEC. 8. A fee of two dollars and fifty cents shall be paid to the secretary of the California stallion registration board for the examination and enrollment of each stallion or jack pedigree, and for issuance of a license certificate in accordance with the breeding of the stallion or jack as above provided, which shall be in force and effect for a period of one year from its date, and for the purpose of carrying out the provisions of this act. The fee shall be paid to the secretary of the California stallion registration board at the time the application is made for enrollment. Upon a transfer of the ownership of any

*For form of certificate see pages 19 to 21.

stallion or jack enrolled under the provisions of this act, the certificate of enrollment may be transferred to the transferee by the secretary of the California stallion registration board, upon submittal of satisfactory proof of such transfer of ownership, and upon payment of a fee of one dollar. A fee of one dollar shall be paid annually for the renewal of a license certificate. A fee of one dollar shall be paid for a duplicate license certificate, upon proof of the loss or destruction of the original certificate.

SEC. 9. Every stallion or jack for which a license has been issued shall be exempt from further examination, unless from later developments it becomes known, and a complaint is filed, certified to by three men, one of whom shall be [a] licensed veterinarian, that said stallion or jack has some hereditary, contagious, or infectious disease which was not evident at the time of previous examination. When such complaint is made, and a request for examination is asked, such complaint shall be filed with the secretary of the California stallion registration board, who shall have another examination made, but the owner of the stallion or jack shall have the right to select a veterinarian legally qualified to practice as such in this state, to act with such examining veterinary, and in case these two shall fail to agree upon a verdict or decision these two veterinarians shall appoint a third qualified veterinarian, with the consent and approval of said board and owner, who shall act as referee therein, and the decision of said referee shall be final. If such complaint shall be found to be correct it shall be so reported to the secretary, who shall revoke the license in force; *provided*, that the owner of any stallion used for public service in this state shall have a lien on all colts sired by said stallion for the service fee for a period of one year from the date of the foaling of said colt, as now provided by law.

SEC. 10. Every association, person, firm or corporation violating any of the provisions of this act, shall be guilty of a misdemeanor, and shall be punished by a fine not exceeding one hundred dollars (\$100) for each offense; or by imprisonment in the county jail not exceeding fifty days, or by both such fine and imprisonment.

SEC. 11. The funds accruing from the above named fees shall be used by the said stallion registration board to defray the expenses of enrollment of pedigrees and issuance of licenses; to provide for the examination of stallions and jacks when necessary; to publish reports or bulletins containing lists of stallions and jacks examined, which shall be not less than one in each year; to encourage the horse breeding interests in this state; to disseminate information pertaining to horse breeding, and for any other purposes as may be necessary to carry out the purposes and enforce the provisions of this act. Each member of the above committee shall receive his actual expenses incurred while in the performance of any duty imposed under the provisions of this act; the secretary of said board shall receive for his services an amount to be fixed and agreed upon by said board. It shall be the duty of the said stallion registration board to enforce the provisions of this act, and to make an annual report, including financial statement, to the governor of the state on September 15th of each year.

SEC. 12. This act shall take effect and be in force on August 1st, 1911.

FORM OF CERTIFICATE.

(Section 7 of Registration Law.)

PUREBRED.

CALIFORNIA STALLION REGISTRATION BOARD.

Certificate of pure bred stallion or jack, No.*The pedigree of the stallion or jack (name)**Owned by**Bred by*

Described as follows:

Color Breed

Foaled in the year, has been duly examined and it is hereby certified that the said stallion or jack is registered as number in studbook, said studbook being recognized and certified to by the secretary of the department of agriculture, Washington, D. C., and is of pure breeding. The above named stallion or jack has been examined by, veterinarian, and is reported as free from infectious, contagious or transmissible disease or unsoundness, and is licensed to stand for public service in the State of California.

Signed

Secretary California Stallion Registration Board.

Dated this, 19____, at Sacramento, Cal.

GRADE.

The license certificate issued from a grade stallion or jack, whose sire or dam is not purebred, shall be in the following form:

CALIFORNIA STALLION REGISTRATION BOARD.

Certificate of grade stallion or jack, No.*The pedigree of the stallion or jack (name)**Owned by**Bred by*

Described as follows:

Color Foaled in the year, has been duly examined, and it is hereby certified that the said stallion or jack is not of pure breeding, and is, therefore, not eligible for registration in any studbook recognized and certified to by the secretary of the department of agriculture, Washington, D. C. The above named stallion has been examined by, veterinarian, and is reported as free from infectious, contagious or transmissible disease or unsoundness, and is licensed to stand for public service in the State of California.

This license expires on, 19_____.

Signed

Secretary California Stallion Registration Board.

Dated this, 19____, at Sacramento, Cal.

CROSSBRED.

The license certificate issued from a stallion whose sire and dam are purebred, but not of the same breed, shall be in the following form:

CALIFORNIA STALLION REGISTRATION BOARD.

Certificate of cross bred stallion, No. -----

The pedigree of the stallion (name)-----

Owned by -----

Bred by -----

Described as follows:

Color ----- Foaled in the year -----, has been duly examined, and it is found that his sire is registered in the ----- studbook as number -----, volume -----, at page -----, and his dam in the ----- studbook as No. -----, volume -----, and page -----.

Such being the case, the said stallion is not eligible for registration in any studbook recognized and certified to by the secretary of the department of agriculture, Washington, D. C. The above named stallion has been examined by -----, veterinarian, and is reported as free from infectious, contagious or transmissible disease or unsoundness, ----- and is licensed to stand for public service in the State of California.

This license expires on -----, 19-----.

Signed -----

Secretary California Stallion Registration Board.

Dated this -----, 19-----, at Sacramento, Cal.

NON-STANDARD BRED.

The license certificate issued for non-standard bred stallion, shall be in the following form:

CALIFORNIA STALLION REGISTRATION BOARD.

Certificate of non-standard bred stallion, No. -----

The pedigree of the stallion (name)-----

Owned by -----

Bred by -----

Described as follows:

Color ----- Foaled in the year -----, has been duly examined, and it is hereby certified and found that said stallion is not eligible to registration as standard bred, and for the purpose of this license is not pure bred, although recorded in the non-standard department of the American trotting register.

The above named stallion has been examined by -----, veterinarian, and is reported as free from infectious, contagious or transmissible disease or unsoundness, ----- and is licensed to stand for public service in the State of California.

This license expires on -----, 19-----.

Signed -----

Secretary California Stallion Registration Board.

Dated this -----, 19-----, at Sacramento, Cal.

MONGREL.

CALIFORNIA STALLION REGISTRATION BOARD.

Certificate of "mongrel" stallion or jack, No.

The pedigree as far as known or traced, of the stallion or jack (name)

Owned by

Bred by

Described as follows:

Color Foaled in the year, has been duly examined, and it is hereby certified that the said stallion or jack is of mongrel breeding, and is not eligible for registration in any studbook recognized and certified to by the secretary of the department of agriculture, Washington, D. C.

The above named stallion has been examined by, veterinarian, and is reported as free from infectious, contagious or transmissible disease or unsoundness.....and is licensed to stand for public service in the State of California.

Signed

Secretary California Stallion Registration Board.

Dated this, 19...., at Sacramento, Cal.

OFFICE OF THE
STATE COMMISSION IN LUNACY.

SACRAMENTO, December 15, 1914.

To the Legislature:

In compliance with the statute, the State Commission in Lunacy herewith presents its ninth biennial report, covering the two fiscal years beginning July 1, 1912, and ending June 30, 1914.

The report includes such facts in regard to the institutions for the insane and feeble-minded as seem necessary for your information, with the annual reports made to the Commission.

Respectfully submitted.

STATE COMMISSION IN LUNACY.

REPORT OF THE GENERAL SUPERINTENDENT.

The State Commission in Lunacy herewith presents its biennial report for the two years ending June 30, 1914.

The work during the last two years has been marked by increased progression and improvement.

In a medical way very much closer and more careful work is being done in the investigation of the causes of insanity. Much bacteriological and serological work is being done at all of the hospitals. At Napa we have a trained pathologist whose class of work will be found specified in a special article on the subject in the Napa report, a part of this volume. At Southern California State Hospital we also have an excellent pathological worker. For the other northern hospitals we have as part of our equipment a trained worker in serology, Dr. Grace L. Boalt, who takes care of them all. With this kind of work there is a closer study of the individual and a detection of organic troubles as a cause of disordered mentality. We have added more trained nurses and to some extent increased our working force of attendants. Much work has been done in the improvement of existing structures, water supply, lighting and heating systems, and in providing additional accommodation for patients; a statement on this subject will be found elsewhere itemized.

Through the efforts of the Commission and the assistance of the Board of Control and the State Hospitals we have been able to place two very important workers in the field, one for after-care work of the paroled and discharged insane, and the other a eugenics field worker.

AFTER-CARE WORK.

For many years the difficulty of keeping in touch with our paroled cases has been a problem. Patients are paroled or given a leave of absence in the care of their relatives when their conditions and home conditions will justify it. While these patients are paroled on a thirty-day period, subject to renewal, and their relatives agree to report their condition to the hospitals, it is a fact that the hospitals are unable to keep closely in touch with them so that they may have close knowledge. Under the after-care system we have a physician located in San Francisco who looks after the paroled in the cities around the bay and reports the true situation of patients and home surroundings to the proper hos-

pital. The worker is in a position to give advice both to patient or friends and visits the home where the patient is not well enough to come to her. Another very useful feature of her work is her attention to the friendless women discharged from the hospitals. She assists them in securing employment and finds a proper place for them to live until they are able to do something for themselves. It is no stretch of the imagination to realize that a young woman who has suffered from a mental breakdown, who has spent her savings in medical treatment, who has been committed to a hospital for the insane and who is finally discharged as restored to reason but who leaves the hospital penniless and may be discouraged, needs a helping hand to tide her over the period in which she begins life anew. Our after-care worker has been extending to them this helping hand.

Dr. E. C. Reid, who is our after-care worker, is a woman of broad experience in the care of the insane, having been for a number of years an assistant physician at the Government Hospital for the Insane at Washington, D. C., and for a year or more at the Mendocino State Hospital. She is in constant attention at the sessions of the Examiners in Lunacy in San Francisco, becomes acquainted with the patients and keeps in touch with those whose cases are under suspension. The work promises to grow both in its extent and importance and to become more necessary and valuable as it grows.

EUGENIC FIELD WORKER.

Through the kindness of the Eugenics Record Office, and those supporting it, we have been able to install a trained field worker, and will probably have her services for the next year or more. This work means the careful and scientific study of the hereditary aspect of mental defect. The chief advantage of eugenic work, which studies the factors of race betterment and is concerned with the improvement of inborn traits of the race, is in its relation to future generations. That human heredity is governed by law is an accepted fact, but the discovery of the exact methods of inheritance and the relation to defects depends upon a prolonged and careful study of the histories of the families who bring into the world defectives. Many thousands of families must be studied and much time taken before conclusions can be drawn intelligently.

The field worker starting with defective or insane individual traces the family, the relatives direct and collateral as far back as possible—two or three generations if possible. To carry out the work the worker must be trained, must have discretion, patience, and perseverance. The results and records of the work are kept and tabulated at the Eugenics Record Office at Cold Spring Harbor, New York, where they are studied and conclusions drawn. This office is maintained by a few public spirited people who are interested in race betterment, and also desire

that the forces controlling and the hereditary consequences of marriage matings should be carefully studied with a view to ultimately benefiting the public by education on these points.

Field workers are scattered throughout the United States and the results of their research studied at Cold Spring Harbor. No publicity is given the names, results are looked for and will be made public when sufficiently studied to draw proper conclusions.

We all recognize that inheritance or heredity is of the greatest importance in the transmission of human traits and California is fortunate in being able to have the services of a field worker.

Miss Ethel H. Thayer, who is in charge of the field work, has taken the course of study at the Cold Spring Harbor School at Long Island, N. Y., and has had a year of actual service in that state.

DENTISTS.

Resident dentists have been installed at the Stockton and Southern California State Hospitals and prompt attention is given to the necessary work of the patients. This installation cuts off the two largest state hospitals from the work of the state dentist and enables him to give more time to the other four.

RE-EDUCATION OF PATIENTS.

Much attention is being given to this class of work, at least two of the hospitals having special teachers who are doing good work and benefiting many patients. Attention is called to the remarks of Dr. Clark, superintendent of the Stockton State Hospital, on this subject.

NORWALK STATE HOSPITAL.

A site of three hundred acres for the new hospital for southern California, near the town of Norwalk, Los Angeles County, has been purchased. The land has been examined by the director of the agricultural department of the State University, Dr. Thos. F. Hunt, and his assistants, and a definite plan of improvement and management of the farm formulated. Plans are now being drawn by the state architect for the main kitchen, commissary and bakery, the engine and boiler room, and one cottage for patients. It is believed by the state architect that these buildings should be completed by October, 1915.

Additional appropriations will be needed for enlargement and it is hoped that the legislature will grant us sufficient to complete the laundry and several cottages with steam, water, and light connections.

The gross population of the ten largest towns in southern California is six hundred and thirty-five thousand eight hundred and thirty-two. The gross population of ten of the largest cities of the northern and central end of the state is eight hundred and ninety-one thousand seven

hundred and ninety-eight, with four hospitals for their care. The disproportion is evident and emphasizes the necessity for liberal appropriations for Norwalk, that we may quickly relieve the hospital at Patton.

INCREASE OF INSANITY COMPARED WITH INCREASE OF POPULATION IN CALIFORNIA.

The general interest in the question of increase of insanity will justify a few words on the subject.

The comparison made between June 30, 1910, and June 30, 1914, both for insane and population.

The estimates for population as made by the United States Census Bureau for 1910 are taken rather than the actual figures for the reason that there are no actual figures made for the year 1914. In 1910 the estimate for California's population was 2,396,379, while in 1914 the estimate was 2,757,895, an increase of 15 per cent. In 1910 there were on the books of the state hospitals and private hospitals 7,326 patients, while in 1914 there are on the books of the hospitals and private hospitals 9,258.

From the number of 1914 we should deduct 309 who remained in the hospitals under inebriety commitments, leaving us a total of 8,949, or an increase of 22 per cent.

To put this in another way, in 1910 there was one insane to every three hundred and twenty-seven, and in 1914 one insane to every three hundred and five of the general population. But commitments in the last two years have increased 25 per cent, excluding the inebriety commitments in both cases.

Of the commitments $34\frac{9}{10}$ per cent were foreign born. There is no estimate as to the number of foreign born at present, but in 1910 they constituted $24\frac{7}{10}$ per cent of the population.

The figures given above are based on the book population, that is, they include those on parole and not actually in the hospital but subject to return at any time; it also includes those in private hospitals. This method was taken for the reason that those on parole are presumed to be patients until discharged.

Comparing the actual numbers present in the state hospitals between June 30, 1912, and June 30, 1914, the increase is shown in the table below:

Actual number present in State hospitals, 1912.....	8,484
Actual number present in State hospitals, 1914.....	8,742
Increase in two years.....	258

In this tabulation the committed insane increased 348 and the voluntary cases by 45, while the inebriety cases on hand had decreased 135, leaving an actual increase of 258, or 3 per cent.

DEPORTATION OF ALIENS.

Attention is called to the report of Mr. Chas. F. Waymire of this office regarding the deportation of aliens in state hospitals.

Without any appropriation we have returned to their home country 125 Chinese out of the hospital support funds. While we were able to do this it was a considerable expense and has greatly limited our support fund balances. This return of Chinese has given us additional room and will result in a considerable saving, but the work has proven the necessity of some fund out of which we could return to their homes those who have been committed to our hospitals from other states; we should have a fund out of which the expense could be borne. We are not particular about having the money appropriated to this office, but believe if \$20,000 could be appropriated for the State Board of Control or the Controller, to be drawn upon proof that we could return these non-residents, it would result in good and be wisely expended.

EXPENSE OF STATE HOSPITALS.

With an increased number of patients the total cost of maintaining hospitals will naturally increase, but so long as the per capita or individual cost is kept within reasonable limits the other increase is normal.

There was some advance in the per capita cost during the last year due to several principal causes, viz, the increased cost of our staple contract supplies and the increase of the wages of women employees to the level of the wages of men doing similar work, the increase in mechanics' wages, and the increase of the wages paid nurses and attendants at the Sonoma State Home to a level of those paid at the hospitals. These principal causes of increased cost, one, the cost of supplies unavoidable, the others, the increased wages of women to a level of men, and the increased wages of mechanics and the Home employees entirely justifiable, made an apparent advance of $6\frac{1}{2}$ per cent in the per capita cost over 1912, or \$12.13 per patient, while by economies in other lines the actual increase amounted to \$6.73, showing that under ordinary conditions our per capita cost would have been less.

The State Architect has supplied this office with the following information regarding the progress of the work under construction made under the appropriations by the last legislature. Some of the work has not yet been completed, but is well under way or near completion.

Appropriations.

	Furnishing	Building	Contract price
Sonoma State Home			
Boys' nursery -----	\$1,500 00	\$17,500 00	\$15,985 00
Dormitory—female employees -----		5,000 00	Not let
Cottage for epileptic girls -----	1,500 00	17,500 00	Not let
Farm cottage -----		2,000 00	Day labor
Water supply -----		10,000 00	
Septic tanks -----		5,500 00	
Southern California State Hos- pital—			
Four cottages (J, K, L, M) -----	\$20,000 00	\$80,000 00	\$73,070 25
Laundry -----	2,000 00	18,000 00	Not let
Reservoir -----	5,000 00		
Water stock -----		10,000 00	
Stockton State Hospital—			
Ward 25 -----	\$2,500 00	\$55,500 00	\$48,472 00
Dairy building -----	1,200 00	18,800 00	Not let
Elevators -----		6,000 00	Day labor
Heating male ward -----		15,000 00	Day labor
Fire system -----			
Reflooring -----		15,000 00	
Norwalk State Hospital—			
Buildings and land -----		\$250,000 00	Not let
State dairy herd -----		12,000 00	
Purchase of land -----		90,000 00	
Agnews State Hospital—			
Workers' cottage -----	\$7,500 00	\$52,500 00	\$36,750 00
Nurses' home -----	7,000 00	43,000 00	32,750 00
Rewiring and steam -----		30,000 00	Day labor
Mendocino State Hospital—			
Gas plant -----		\$10,000 00	\$5,285 00
Reservoir -----		12,500 00	
Napa State Hospital—			
Laundry -----		\$25,000 00	\$19,354 00
Dozier cottages -----		13,000 00	11,428 50
Dairy buildings -----		20,000 00	16,985 00
Farm dormitories -----	\$1,000 00	9,000 00	Day labor
North pay cottage alteration -----		10,000 00	8,337 00
Steam boilers -----		7,000 00	4,180 00
Steam heating -----		20,000 00	Day labor
Rewiring -----		15,300 00	Day labor
Chambers, cottage -----		12,000 00	Not let
Reclamation -----		10,000 00	

THE NEED AND PURPOSES OF PSYCHOPATHIC HOSPITALS.

One county in this state, Los Angeles, has built and equipped a modern psychopathic hospital. Recently a physician well equipped for the treatment of mental diseases has been appointed physician in charge.

A well equipped psychopathic hospital will provide scientific care and treatment for persons against whom an insanity charge has been made, until their cases can be investigated as thoroughly as necessary and they are either discharged by court or provision made for them elsewhere. Persons suffering from mental diseases should be admitted who on investigation are found to be proper subjects for treatment. Acute cases temporarily detained should be kept a reasonable time for treatment. At such an institution properly conducted laboratory work and clinical methods will work hand in hand, and problems of secretion and metabolism can be worked out.

Much of the advance in medicine has been due to laboratory methods. With modern hydrotherapeutic methods cases of acute delirium from alcohol and other causes can be properly treated without over-drugging. Such a hospital under scientific management, laboratory, medicine, and social service would become the center of education for physicians.

These excited and delirious patients are not treated in general hospitals by methods elaborated in hospitals for the insane. They are not generally prepared to supply hydrotherapy, special attendants and isolation rooms. Many cases of acute alcoholic delirium are committed as insane who could be just as well or better cared for in a psychopathic hospital. The psychopathic hospital will afford early treatment, advanced investigation with the combination of the assistance of social workers, and will be a distinct progression in the work of caring for the insane.

The state has many burdens on its hands and the counties should come forward and help in this advanced work.

ASEXUALIZATION.

Without going into definite details it may be stated that we have continued our work of sterilization and have done some 300 cases since our last biennial report. The longer we continue this work and the more study we give to it, the more convinced we become of its beneficial curative and preventive tendencies.

Those who keep in touch with insane work must have become convinced of the increasing number of defectives and departures from normal among the fairly young people.

The more acute maniacal forms seem to lessen, while those with disharmonies, with ill formed delusions, with the various alcoholic psychopathies, seem to increase.

In our sterilization work we have followed the same plan of obtaining the consent of relatives, where they can be found, before operating. Especially in women we are very particular to obtain consent before undertaking the more serious operation.

There is on the part of some writers a tendency to take it for granted that vasectomy is negligible in its effects. Such a conclusion is contrary to our experience, for we find that many of our cases show a marked clearing up a few weeks after operation. In several instances patients have applied for vasectomy after consulting with their fellows who have been operated upon and have found benefit from it. In women, who with every childbirth have a pronounced mental upset, there can be no valid objection to the work, or in those women who, while still single, continue to bring into the world children whose fathers are unknown, it would seem the part of wisdom when they become insane to cut off their reproductive ability.

Sterilization may possibly prevent the development of a future genius once in a while, but so many who are defective or psychopathic come into the world for lack of sterilization that it is hardly profitable to discuss the question. The genius is a remote possibility, the defective is a distinct probability. Most of our cases have been between the ages of twenty and thirty years of age; quite a number are under twenty.

Of the types of mental trouble manic depressive forms are in the majority with dementia praecox, epilepsy and alcoholic psychosis next in order.

When you come to discuss the number of cures much latitude must be used. For instance, I have before me an unselected series of twenty-one cases, all women, in whom there was 50 per cent of restorations. In some of these cases the operation was done after decided improvement and preliminary to their discharge after consultation with their relatives as to the advisability of the operation.

Study of the individual case and his or her potentiality for reproducing defectives is necessary and should be given.

DEFECTIVES AND FEEBLE-MINDED IN CALIFORNIA.

Those who study the subject closely realize that mental defectiveness is the foundation upon which is gradually built up much of our mental troubles, much of our crime and delinquency, much of the retrogression from sober, law-abiding citizens into shiftless ne'er-do-wells, into inebriety and dependency. This short article is intended to be a discussion of the situation as it exists in California. The subject will be treated more from the social and financial aspect than the scientific. No new theories will be advanced, but a plain statement of facts will be presented and liberal quotations made.

As a general rule it is the idiot and imbecile that comes to our mind when the subject of mental defectiveness or feeble-mindedness is discussed because they only are representative of a class whose trouble is apparent to slight observation.

Recent writers, as Goddard, Healy, and others, include under the term the following:

A. Feeble-minded.

- a. Idiots, mental age below two years;
- b. Imbeciles, mental age between two and seven years;
- c. Morons, mental age between seven and twelve years.

B. Subnormal or mentally dull but above the usual institutional type.

C. Mentally dull or debilitated chronically from—

- a. General physical condition.
- b. Enfeebling habits, including the use of stimulants and narcotics.

D. Cases of specialized mental defect.

Of these the feeble-minded, because they are a recognized institutional class, are of particular interest to the public generally. It is common to associate the idiot and imbecile with the term feeble-minded, but the term has a much broader meaning and should include that very much larger class "who by reason of incomplete development of brain or mind are unable to perform their duties as members of society in the position of life to which they were born and live a normal life"; who are "unable to compete with their fellows in the struggle for existence"; who are "unable to manage their own affairs with ordinary prudence"; who are "unable to exercise that self-control which is necessary to live a moral life." It is easily understood that under this social definition very many are included that are not recognized as feeble-minded. It is roughly estimated that there are close to 8,000 feeble-minded in this state, though the exact number is not known. Recently an effort has been started to secure reliable information on this subject. With the present investigation, which has only been started, we have definitely located between 3,500 and 4,000. There are at the present time 1,100 inmates at the Sonoma State Home (Home for Feeble-minded), with over a hundred more on the waiting list. The population of the Home is measured only by its capacity. It never has room to receive all those who apply. Recently, with a view of a study of the type of cases maintained at the Sonoma State Home, Dr. William Palmer Lucas of the University of California and Professor Terman of the Stanford University have, at the request of the Commission, made through their assistants, Dr. Brosseau and Miss Lyman, a careful examination of the inmates of the Home with a view to classification of the cases and suggestions for future treatment. As a result of psychological tests and

the Binet-Simon method they have, after four months' work and a study of some 825 cases, classified them as follows:

Idiots, of a mental age up to two years, 281.

Imbeciles, of a mental age up to seven years, 389.

Morons, of a mental age up to eleven years and over, 155.

Each of the above classes is further subdivided into the low grade, the middle grade, and the higher grade, according to their relative capabilities.

The above classification is that adopted by the American Association for the study of the feeble-minded.

The classification is based on the assumption that intellectual capacity, as such, is complete in a normal child at about thirteen years of age and that any considerable arrest of mental development that accrues before that age renders the child feeble-minded and that his place in the scale is expressed by the age of a normal child of corresponding mental ability.

The Binet-Simon scale enables us to classify our feeble-minded children into those that are like normal children of one year, two years, three, four, etc., and up to twelve.

Formerly, what we now term "Morons" were called high grade imbeciles. The term "Moron," a fairly recently suggested word, applies to those of a mental age up to twelve years, and means literally "a dull thing."

In the survey of the Home made by Doctors Lucas and Terman they classified as "Morons" one hundred and fifty-five out of eight hundred and twenty-five examined, or a percentage of practically 18.5. With the pronounced idiots and imbeciles we must rest content with the belief that the greater proportion of them become inmates of an institution for their care, but with the higher grades, the "Morons" and the subnormally dull, and those with specialized defects, the question of their disposition and care becomes one of great moment.

With these higher grade mental defectives we are brought face to face with a problem that is difficult to solve and far-reaching in its effects. There is no doubt but that the higher grade defectives, the subnormally dull, and those with specialized defects, are responsible for much drunkenness, much prostitution, much crime, and much that tends to disturb public welfare.

A recent mental test of those committed to one of our state hospitals under the inebriety law demonstrated that 85 per cent were of mental age not over twelve years.

There is no doubt but that a very large proportion of the prostitutes are mentally deficient.

Experience teaches that a large percentage of our dependents and our delinquent or criminal class are mentally defective.

The high grade mental defectives are among our worst offenders, inasmuch as "a certain amount of shrewdness and skill is not incompatible with a moderate amount of intellectual subnormality."

It must be recognized that in the criminal class of defectives the centers of self-restraint are most defective—they may have full knowledge of the nature of their offenses and comprehend that they are morally wrong, still they have not the will power to resist the impulse to commit a wrongful act.

We can not leave this subject without considering for a moment the epileptic. It is estimated by careful observers that there is one epileptic to every five hundred of a general population. At the Home for Feeble-minded there are two hundred and ninety epileptics out of a population of eleven hundred. Of the epileptics, many of them were originally feeble-minded and have the epilepsy engrafted on the condition. Others have been originally ordinarily bright but have been brought into a condition resembling feeble-mindedness as the effect of the long continued epileptic convulsions. There is no doubt but that many of our repeated offenders are epileptics. A careful study shows that at least 7 per cent of repeated offenders are of that class.

An epileptic who develops criminal tendencies is, from the standpoint of society, a dangerous person. An impulse, and any deed may be committed—fancied injuries without a basis of truth may lead to murder or other crime, often sexual in its character. Long continuation of epilepsy gradually tends to defectiveness and brings about danger to society.

HIGH GRADE DEFECTIVES.

Considering the higher class of mental defectives there is no doubt of the troubles caused by them. In the idiots and the lower grades of imbecility the trouble is so apparent that protection is assured by the institutional life or home care, but among the higher grades we find those superficially bright who have some special defect that ultimately is the cause of great trouble. In some there is a lack of the moral sense, and in spite of tender home care, bad associations are made, bad habits contracted, truth telling is an unknown quantity, affection for those who tenderly rear is forgotten, and life is made a burden to the family. There being lack of development of the moral sense, there is no power to guide the individual along the right paths of truthfulness, honesty and virtue. This condition is bad enough among the boys, but in the girls the misery and anxiety are increased a hundredfold in the families. Again, we have a class that are failures in life, who can not, as the age of self-support approaches, maintain themselves. They fail in all useful methods of self-support, they have been backward at school, their deficiency has been recognized but overlooked in the hope that with increasing years ability and steadfastness would come. From this class many

of our drunkards, our drug users, our sexual offenders, and our repeating offenders come. With all the opportunities for a better life and for education they have not been mentally able to benefit by their studies and resist the impulse to do wrong. The foundation of their troubles is to be found usually in a true lack of development of brain or mind engrafted upon them by their ancestors, which greatly limits their capacities to benefit by study or to properly exercise their will power. The problem is particularly difficult among high grade feeble-minded girls. How best can they be protected and prevented from bringing forth their kind? Segregation with education and cultivation of such industrial pursuits as women can engage offers encouragement, but the burden of segregation will be great and become greater with the passage of time. Another greater hope is in sterilization. Sterilization prevents procreation and makes it safe, as far as future generations are concerned, to liberate many for whose protection restraint is necessary.

CAUSES OF FEEBLE-MINDEDNESS.

One great cause stands out above all others—heredity. There is nothing more certain in inheritance than the statement that feeble-minded will bring forth feeble-minded. Sixty to seventy per cent are due to heredity. The condition if due to heredity is not one of disease but to defective cell makeup. There is a true arrest of development due to internal causes. Feeble-minded grow to a certain development of brain and then stop. The limitations are transmitted by their ancestors. "For each tree is known by its own fruit; for of thorns, men do not gather figs, nor of a bramble bush gather they grapes." (St. Luke vi, 44).

Other causes are to be found in injuries to mother before the birth of the child, injuries to the child at birth or falls or other injuries during infancy. Alcoholism or syphilis in the parents are pretty active factors in causing deficiency in the children. Toxic causes during disease, as in scarlet fever, measles, etc., are to be reckoned with. Deprivation, loss of sight and hearing, whereby the individual is prevented from communicating with his fellows, may bring about feeble-mindedness unless means are taken to communicate with him and develop his mentality.

THE PRESENT AND FUTURE OF THE SONOMA STATE HOME.

During the summer, at a meeting of those interested in the care of defectives, the suggestion was made that Dr. Lucas, of the Medical Department of the University of California, make a survey of the Home and its inmates with a view to offering suggestions for its improvement. He has embodied the results of his examination in a report, from which I quote below:

"The material development of the grounds, the care of the wards, the attention to the physical wants of the children deserve heart's praise

from the state. The inmates are well fed and well clothed, and the attention to the details in the care of the children is exceedingly good, especially when one considers the large number he (Dr. Wm. J. G. Dawson, superintendent) must care for and the comparative crowding of the buildings.”

It has been recommended by Dr. Lucas that “the teaching force be largely increased, that we pay greater attention to the teaching of industrial pursuits, that we increase our grade teachers, that we increase our corps of physicians. More vocational work is advised with a trained teacher for each class of work and a considerable development of recreational features.”

At the present time, out of eleven hundred inmates, five hundred and sixty-five are engaged in some useful work. Fifty-four work in the sewing room, seventeen iron in the laundry, and others help on the wards, dining-rooms, and assist in the care of the helpless. Of the boys, twenty-four work in the laundry washing and sorting room, eight in the carpenter shop, five with the landscape gardener, twenty-nine in various outside details, six on the ranch, and the rest scattered through the buildings and grounds.

Further summarizing the recommendations of Dr. Lucas, he advocates “the enlargement of the kindergarten department so that every child in the lower grades shall have an opportunity to be studied and to develop whatever capacity he may have; that in the higher grades we should have one teacher to every twenty or twenty-five children; that the vocational system now in operation be enlarged; that recreational teaching be much enlarged; that an educational director be employed to have charge of all educational work; that a vocational school be erected costing in the neighborhood of one hundred thousand dollars (\$100,000.00), and that a Moron colony for girls be developed.”

In the foundation of a Moron colony for girls Dr. Lucas proposes that cottages with a capacity of fifteen or twenty inmates each be erected on the property of the Sonoma State Home, but at a considerable distance from the main buildings. Each cottage is to have a teacher and an assistant in charge who should educate the children and keep them occupied in the vocational school.

The question of the care of these higher grade girls is a serious one. That protection and vocational education and work is advisable for them is undoubted, and the establishment of such a colony would be great progress.

Whether the state is now prepared to take up this subject and expend the \$125,000, or more, which will be necessary to build, equip and maintain this colony for one year, is a question of policy and finance and must be determined by those best fitted to judge, the legislature.

F. W. HATCH,
General Superintendent of State Hospitals.

REPORT OF AFTER-CARE PHYSICIAN.

State Commission in Lunacy.

GENTLEMEN: I beg to submit the following statement of work done since my appointment:

The first three weeks were spent in visiting state hospitals at Stockton, Agnew and Napa.

The latter part of July an office was established at the University of California Hospital, where an office and the services of a stenographer for part of the day were accorded me by the University free of charge.

The hours of 9 to 11 every morning were set aside as office hours; likewise 7 to 9 every Monday evening for the benefit of those who work during the day.

Eighteen patients paroled or discharged from state hospitals have called for consultation.

Thirty-two friends or relatives have called seeking advice regarding patients.

Seventeen patients have been brought to the office for examination as to their sanity.

Eighty-nine calls have been made in San Francisco, Oakland, and Berkeley on or in behalf of patients.

Homes and employment have been found for five women paroled or discharged from state hospitals.

Daily visits have been made at the detention hospital where patients are committed to state hospitals.

Three alcoholic patients have been paroled in my care by the court and ordered to report weekly in lieu of sending them to state hospitals.

The time spent at the various hospitals gave me an opportunity to become acquainted with the medical staffs of these hospitals, their methods of work, and the patients about to be paroled or discharged. It also put me in the position to answer intelligently questions asked by prospective patients and their friends in regard to the various hospitals. Friends and relatives of patients have called seeking advice on all sorts of subjects, namely, advisability and methods of having patients committed to state hospitals, having them discharged or paroled from state hospitals, the advisability of visiting them and writing letters to patients, the sending of clothing, food and medicine.

Of the seventeen persons brought to the office for examination as to their sanity, two were from the city prison. Four of these were found

to be normal, ten were found to be suffering from mild mental disorders, but remain at home and receive some supervision from the social workers of general hospitals; three were found to be insane and considered to be dangerous if left at large; these were committed to state hospitals. Examinations made in this way have in many cases saved the trouble and expense of having persons suspected of being insane having to be arrested and taken to the detention hospital for examination by the Lunacy Commission.

Many calls were made at the request of the superintendents of the various hospitals to investigate home conditions before patients were paroled or discharged, to discover actual facts in cases where family quarrels regarding guardianship of persons and property had arisen, and to ascertain the mental condition of persons on parole who applied for discharge.

The most important need of the work at the present time is a home where women and girls paroled or discharged from state hospitals, and who are without friends or money, can find a temporary shelter while they are looking for positions. This work might be carried on in some home for women and girls already established. The Girls' Welfare Home of San Francisco announce their willingness to assist in this work to a limited extent. A fund from which they could be allowed a small sum of money for carfare and employment agency fees is very needful. The disbursing of such a fund should be left to the discretion of the superintendents of the state hospitals, who would be in a position to know the needy and worthy cases.

Respectfully submitted.

EVA C. REID,
After-Care Physician for State Hospitals.

REPORT OF SECRETARY.

To the California State Commission in Lunacy.

GENTLEMEN: I respectfully submit to your honorable commission the following report for the sixty-fourth and sixty-fifth fiscal years:

The collections for the contingent funds of the various state hospitals for this biennial period show a satisfactory increase over the preceding two years, and are the greatest in the history of this commission. The collections for the period were:

Sixty-fourth fiscal year-----	\$192,202 08
Sixty-fifth fiscal year-----	203,842 23
Total -----	\$396,044 31

showing an increase over the preceding two-year period of \$66,985.80.

The efforts of the attorneys for the commission should be favorably mentioned, not only for the results obtained in a financial way for the state through their activities, but also for the valuable service rendered the commission in opinions and advice in consultations. Mr. C. P. Cutten acted as attorney for the commission from June 1, 1911, to August 1, 1913, the date his resignation took effect. Mr. Edward J. Tyrrell was appointed to succeed Mr. Cutten and is the attorney at the present time. From personal observation I feel that the commission can well commend their work.

The collections for the state of charges for transportation of the insane to the several state hospitals also show a material gain over previous years.

Following will be found tables showing collections at the state hospitals by months during the last two biennial periods, movement of patients, nativity, statement of contingent funds, etc.

Respectfully,

E. S. BIRDSALL,
Secretary.

MONTHLY RECEIPTS AT THE FIVE STATE HOSPITALS.

REPORT OF ATTORNEY.

To the California State Commission in Lunacy.

GENTLEMEN: The undersigned was appointed attorney for the Commission on the first day of August, 1913, and at the time of submitting this report (June 30, 1914) has served your honorable Commission for a period of eleven months.

Hon. Charles P. Cutten, my predecessor, in turning over the affairs of the office to me, submitted a concise and intelligent history of the matters then pending, and I have had little or no difficulty in taking up the work where he left off.

The collection of delinquent accounts is one of the duties which takes a large part of the time of the attorney. Many cases are brought to his attention which require considerable correspondence, tact, and in some instances, the commencement of a legal action. During the eleven months covered by this report I have collected in the neighborhood of \$5,000, a large part of which passed through my hands and was promptly remitted to the Commission. These collections were made by me after the various hospital authorities had been unable to accomplish any results.

In many instances we have discovered relatives or guardians of non-pay patients who had heretofore failed to pay the monthly rate specified by law, notwithstanding they were amply able to do so, and they have been compelled to assume this just burden.

A great many opinions were requested of the attorney by the medical superintendent and the Commission itself, and they have been promptly answered.

Section 2185c of the lunacy law, commonly referred to as the "in-briety section," has caused not only the various medical superintendents, but the general superintendent and the attorney much trouble and work. The judges of the superior courts throughout the state have committed many patients to the hospitals where the affidavit for the arrest was absolutely void in view of a decision of the Supreme Court, and we have experienced a great difficulty in persuading the judges to see that a proper affidavit was made in every case, the result being that many patients were released by the medical superintendents on the ground that they were not properly committed.

It is the intention of your attorney to endeavor to remedy this trouble by having this section amended at the next session of the legislature. It is also my intention to endeavor to so amend the law that more attention will have to be paid to an examination of the financial standing of the intended patient at the time he is examined before the superior court. In many instances we find the judges are somewhat lax in ascertaining whether or not the patient has sufficient funds to pay the prescribed rate, or whether he has relatives upon whom the law places this obligation with the result that numerous patients are committed as nonpay cases, and later on, after we have ascertained they have considerable property, or relatives well able to pay the small monthly rate prescribed by law, it has been a very difficult matter to collect the arrears due from the time the patient was admitted to the hospital.

While section 2178 of the lunacy law (P. C. 2178) provides that the district attorney of each county in which an order of commitment is made must make diligent inquiry into the ability of the person committed to pay the charges and costs of his maintenance and care while in the state hospital, I am of the opinion that this command of the law would be more carefully observed by the various district attorneys if, in addition to the "statement of financial ability" now required to be made out by the judge of the superior court, we could also require a certificate to be made out by the district attorney that he, or one of his deputies, was personally present in court at the hearing and examined the patient and whatever relatives were present in court as to the patient's financial condition.

Your attorney has also been called upon to investigate private matters for patients the hospital authorities had reason to believe had property interests that were not being properly cared for, and in many instances the guardians and attorneys of inmates in the various hospitals have consulted the undersigned in reference to the various interests of their wards and clients.

Respectfully submitted.

EDW. J. TYRRELL.

December 8, 1914.

To the California State Commission in Lunacy, Sacramento, California.

GENTLEMEN: I have the honor to submit the following report of my work as attorney since the rendition of my last report to August 1, 1913, the date of the acceptance of my resignation.

During the period covered by the report I rendered many written opinions to your honorable body, as well as to the different state hospitals. All delinquent accounts submitted to me received my attention. In a great many cases collections were made without resort to legal pro-

ceedings. In other cases it became necessary to cite certain guardians of the estates of insane persons into the superior courts to have them show cause why the particular account should not be paid.

With the approval of the Commission, I prepared for presentation to the legislature bills making certain amendments to the law governing guardians of such insane persons as are or shall be confined in the state hospitals. The objects of the proposed laws were (1) to increase the collections of the hospitals by providing a system whereby the Commission would obtain timely information concerning the financial condition of the patient through the filing of inventories and accounts by guardians; (2) to protect the wards by compelling such guardians to report to the court the value and character of the estates which they may be administering and to account to the court for moneys which they may receive and expend in the course of guardianship. These bills were known as Senate Bills Nos. 202, 203, 204 and 205, and were introduced by Senator A. E. Boynton, who gave them his best attention with the result that they were all reported favorably from the committees to which they were sent, passed by both houses and finally approved by Governor Johnson. The amendment to section 1773 of the Code of Civil Procedure provided for the removal of the guardian of an insane person upon failure to return to the court a verified inventory of the estate of his ward within three (3) months after his appointment, and also provided for his removal upon his failure to render his annual account. Service of a copy of the inventory filed with the court and of all accounts rendered by the guardian must be made upon the secretary of the State Commission wherever the insane person is or has been an inmate of a state hospital.

Section 1774 of the Code of Civil Procedure, as amended, provides that settlement of the account of a guardian of an insane person who is or has been confined in a state hospital can not be made until five days' previous notice thereof had been given to the secretary or attorney for the State Commission in Lunacy. The experience of your attorney in finding guardians of the estates of insane persons who had been studiously and successfully covering up the estates of their wards to escape paying to the state the small amount required by law for the care and maintenance of insane persons who can well afford to pay their way, suggested to him that if the guardian could be compelled to file and serve upon the State Commission in Lunacy the inventory of the ward's estate and his annual accounts, under penalty of losing his guardianship if he failed to perform these duties, that the Commission would secure timely and correct information of the condition of the estates of all of its wards under control of the different superior courts throughout the state.

Section 1777 was amended to provide for the sale or hypothecation of the real or personal property of an insane person when the income of his estate is insufficient to pay the state for his care and maintenance.

Senate Bill No. 206 made an amendment to section 2197 of the Political Code to remove an existing doubt as to the power of the Commission to bring a proceeding in mandamus to compel county officers to perform their duties in respect to making payments to the state institutions for the care and maintenance of its wards in such cases as the law provides that payment shall be made.

On April 1, 1913, I tendered to your honorable body my resignation as your attorney, which was duly accepted on the first day of August, 1913. Shortly after the acceptance of my resignation and the appointment of my successor, Hon. Edward J. Tyrrell, I prepared a detailed report of each case which had been submitted to me during my incumbency and forwarded the original thereof to your honorable body, together with certain correspondence and papers relating to the same. I also forwarded a copy of my report to Hon. Edward J. Tyrrell, together with other correspondence and papers in connection with the cases therein referred to. Each of the state hospitals received a copy of the report in so far as it appertained to cases in which it was interested.

In view of the fact that the report hereinbefore referred to contained a statement of all proceedings taken in each case, I deem it unnecessary to here enumerate in complete detail the actions and proceedings which have been taken in relation thereto during the period for which this report is made. I am appending hereto, however, as Appendix "A," a brief statement in relation to certain of said cases.

Respectfully submitted.

CHARLES P. CUTTEN.

APPENDIX "A."

The cases of State Commission in Lunacy *vs.* John Welch, as treasurer of San Benito County, and State Commission in Lunacy *vs.* John Welch, as treasurer, and Elmer Dowdy, as auditor, of San Benito County, have both been finally decided adversely to the contention of the Commission. These actions against the auditor and treasurer of San Benito County were commenced by the filing of petitions for writs of mandamus to compel payment to the state for the care and support of feeble-minded children sent by that county to the Sonoma State Home for the years 1903, 1904, 1905, 1906, 1907, 1908, and 1909. The first case was commenced several years ago; the petition in the second case was filed August 5, 1910. Demurrers to both petitions were sustained by the Superior Court of San Benito County, and judgments were given and made in favor of defendants on May 24, 1911, before my employment as attorney for the Commission. Appeals were taken to the District Court of Appeal for the First Appellate District from these judgments, in which appeals I participated. The District Court of Appeal on December 12, 1912, rendered decisions affirming the judgments of the Superior Court sustaining the demurrers to the petitions. Petitions for rehearing after decision by the

District Court of Appeal were filed in January, 1913, with the Supreme Court of the State of California, which petitions were subsequently denied. The decisions in these cases will be found in Volume 20 of California Appellate Decisions, at pages 624 and 807.

Claim of Napa State Hospital against Mary J. Anderson for \$105. Citation was issued directing the guardian, Union Trust Company of San Francisco, to show cause why the account of the hospital should not be paid. On March 13, 1913, the sum of \$150 was paid to the Napa State Hospital under direction of the court.

Claim of Napa State Hospital against William Barclay. The patient died at Napa State Hospital August 28, 1889. He left an estate consisting of two certificates of deposit for \$100 and \$200, respectively. The public administrator of the city and county of San Francisco took out letters of administration and acted without compensation.

Claim of Stockton State Hospital against Mrs. Augusta Bock. I secured payment of \$100 on account on February 1, 1913.

Claim of Agnews State Hospital against Mary Burnett. A relative of this patient was persuaded to make regular payments for the care of this patient. Further details will be found in the report of the case.

Claim of Agnews State Hospital against J. P. Burke. I investigated this matter and ascertained that A. G. Gilcrest, a brother-in-law of the patient, had been making payments but could no longer afford to do so. He being under no legal obligation to make the payment, no further action was taken.

Claim of Agnews State Hospital against John F. Burns. Mrs. Edith A. Burns is his guardian. The patient is possessed of property valued at about \$10,000. The property is heavily mortgaged. The attorney for the guardian advised that payment will be made as soon as property is disposed of.

Claim of Agnews State Hospital against Lillian Chase. The patient owed \$13.50. Bert S. Chase, husband of patient, filed petition in bankruptcy. A claim was filed with the referee in bankruptcy for the amount owing which claim was allowed.

Claim of Agnews State Hospital against C. H. Catton. The Union Trust Company of San Francisco is his guardian. I secured an order of court directing the guardian to pay the hospital the sum of \$251 in July, 1911. From that date until July 24, 1913, no payments were made to the hospital. A petition for a citation to compel the guardian to show cause why the claim should not be paid was filed. The case was pending at the time my successor was appointed.

Claim of Mendocino State Hospital against Adeline Delventhal. F. W. Delventhal of 1634 Shrader street, San Francisco, is a son of the patient. The account of this patient amounted to \$352 on July 1, 1913, and suit was commenced on the claim and was pending at the time my successor was appointed.

Claim of Napa State Hospital against Henry E. Dikeman and Louisa Matilda Dikeman for \$925 and \$825, respectively. These patients are brother and sister and are heirs of Simon H. Dikeman, who died in Oakland, November 24, 1907. The interest of each patient is valued at \$15,000. On investigating the guardianship proceedings, I ascertained that there was no lawfully acting guardian for either incompetent. After several months' delay new guardians qualified and suits were commenced for the collection of the above amounts. These cases are pending.

Claim of Napa State Hospital against Daniel Dempsey. This patient is an heir of Martin T. Doyle, deceased. The patient's interest in the estate amounts to about \$100. A petition was filed with the Superior Court of the city and county of San Francisco for an order appointing the secretary of the State Commission in Lunacy guardian of the estate of this incompetent. The secretary was appointed guardian on September 3, 1913. He is now in negotiations with the surety on the bond of the administratrix of the estate of Martin T. Doyle to secure payment of the amount due said Dempsey.

Claim of Mendocino State Hospital against Michael Devereux. Father J. J. Gannon is guardian of this patient. On January 11, 1913, I secured the payment of \$285 to the hospital which paid the account to October 10, 1912. No payments having been made for more than one year, a petition was filed for a citation to

issue directing the guardian to show cause why the account of the hospital should not be paid. The matter was pending when my successor took office.

Claim of Napa State Hospital against Peter Eckmeyer. This case was taken up with Edward S. Bell, attorney for the guardian of the estate of this patient. The court reduced the amount to be paid monthly to the hospital to \$7.50. I do not believe that the court has jurisdiction to make such an order. As the Commission felt disposed to accept the amount, under the circumstances surrounding the case no action was taken to annul the order.

Claim of Agnews State Hospital against Caroline Friedlander. William Friedlander of Berlin, Germany, was the husband of this patient. The husband, during his lifetime, took out a policy of insurance in the amount of \$3,000, making the patient the beneficiary. After his death I attempted to collect from the Connecticut Mutual Life Insurance Company the amount of this policy. Investigation, however, showed that the patient, before she became incompetent, had assigned, for a valuable consideration, all her interest in the policy to a third party. After a careful examination of the assignment I concluded that it was valid and that the patient had no interest in the policy of insurance.

Claim of Sockton State Hospital against Thomas J. Gish. Mrs. M. J. Hughes, 45 Fox avenue, San Jose, California, is guardian. Investigation showed that the patient has property valued at \$1,000 which has not been productive. The guardian promised to pay the hospital as soon as property could be sold. Suit was recommended against guardian to secure judgment in order that collection can be made when property is sold.

Claim of Napa State Hospital against Anne Gyselaar. John Gyselaar, husband of this patient, left an estate valued at \$60,000, one half of which was devised to trustees for the purpose of paying the income for the care of the patient. The trustees entered into an agreement with the hospital to pay \$85 per month for the care of the patient and nurse in attendance, but subsequently refused to make payments. Your attorney interposed an objection to the account of the trustees filed in the Superior Court of Humboldt County and succeeded in having the fees of the trustees materially reduced. He prepared complaints against the trustees and the guardian and advised them that unless payment was immediately made suits would be commenced. Negotiations were entered into resulting in the payment of all the charges for the support of the patient and the wages of the nurse. Payments are now being regularly made.

Claim of Napa State Hospital against Patrick Hassett. The hospital authorities advised that patient was the owner of an estate in Solano County. Investigation showed that patient executed before he became insane a deed to his daughter, Mary A. Hassett, of a lot in Vallejo. No property remains to satisfy any judgment which could be secured on this claim.

Claim of Agnews State Hospital against J. D. Houghton in the sum of \$150. Payment of this amount was secured.

Claim of Agnews State Hospital against J. Hirschbaum. The patient has one third interest in the net income derived from trust estate valued at about \$9,000, of which Union Trust Company of San Francisco is trustee. Patient's interest from estate each month is small. I made arrangements whereby \$15 was to be paid each month to the hospital.

Claim of Napa State Hospital against Rose Haberly. William T. Haberly of 405 Mechanic's Institute Building, San Francisco, is guardian. George W. Haberly, a son of this patient, died leaving an estate valued at about \$10,000. The beneficiary under the will was Emolyn Grace Campbell, a sister of the deceased and daughter of this patient. Suit was commenced by the guardian to recover certain moneys which were alleged to have been collected by the deceased in his lifetime for the benefit of the patient and also an attempt made to break the will of George W. Haberly. Both actions failed. An action was brought against Emolyn Grace Campbell for the sum of \$4,800 for the care and support of her mother. The case was pending at the time my successor took office.

Claim of Napa State Hospital against Susan B. Hart. The patient has an estate consisting of lot of land valued at \$2,000. In order to protect the claim

of the state I secured a note from the guardian for \$580, which will pay the account of the patient to June 1, 1913. The note can be collected as soon as the property is sold.

Claim of Southern California State Hospital against Johannes F. Keffel. The patient's estate is valued at about \$15,000. Johanna Agnes Keffel, mother of the patient, now deceased, was guardian. A claim was presented to the guardian but was not paid at the time of her death. After the appointment of a new guardian, I demanded payment of the account in full. The guardian refused to pay the amount demanded. Suit was commenced in the Superior Court of Los Angeles County against the estate of the incompetent. The action was pending at the time my successor took office.

Claim of Agnews State Hospital against Eliza McKerron. A. McKerron, 122 McAllister street, San Francisco, California, is her husband. He was the owner of a ranch near Gilroy, valued at \$30,000, which was mortgaged. Husband has recently sold ranch and should be in position to pay the account.

Claim of Napa State Hospital against Bartholomew S. Morrissey. Investigation showed that the patient is the owner of an estate consisting of a one fourth interest in a lot on Geary street near Third avenue, San Francisco. The interest of the incompetent amounts to about \$725. An arrangement was made with the attorney for the payment of one year's support at the hospital and thereafter \$15 per month.

Claim of Southern California State Hospital against Helen O. Morris. W. A. Snedeker, 608 Bryson Block, Los Angeles, California, was guardian of this patient. The patient died at the hospital on June 2, 1912. Through negotiations with the guardian the payment of the account in full was secured on May 21, 1913.

Claim of Agnews State Hospital against Charles Pettijohn. E. Myron Wolf is guardian of the incompetent. Investigation showed that on March 5, 1904, the State Commission in Lunacy, through its attorneys, filed a suit in San Francisco against the incompetent for \$1,005. The record in the case was destroyed in the fire of 1906. Pettijohn died March 19, 1913. The public administrator of the city and county of San Francisco was then appointed administrator of the estate. A claim was presented against the estate for \$2,457.50 for fourteen years' board and care. I also prepared and presented a claim for \$1,005 together with interest amounting to \$656.66 previously sued for. In order to have the claim allowed it will be necessary to restore the old records. Steps to have this record restored were being taken at the time my successor was appointed.

Claim of Agnews State Hospital against John Pinard. J. A. Chargin, 167 Vine street, San Jose, California, is guardian of this patient. The patient was discharged April 25, 1913. There was then owing the hospital the sum of \$472. Investigation showed that the guardian had collected several debts due the incompetent and has in his possession cash amounting to \$1,500. A petition was filed and citation issued to the guardian to show cause why the account should not be paid. The matter was pending at the time of my successor's appointment.

Claim of Napa State Hospital against George A. Roberts and Elizabeth Roberts. Investigation shows that George Roberts is the owner of property consisting of $1\frac{3}{4}$ acres of land with a warehouse and grocery store and bar connections situated about five miles from Santa Rosa. Claim can not be paid until property is disposed of.

Claim of Mendocino State Hospital against James F. White. This patient had an estate consisting of cash on deposit with the German Savings and Loan Society. Upon petition being filed with the Superior Court, the secretary of the State Commission in Lunacy was appointed guardian of the patient.

Claim of Agnews State Hospital against Edwin Thomas Renshaw. This patient was committed on May 16, 1900. No payments were made for care and support. I ascertained that patient was entitled to an interest in the estate of Fred Renshaw, his brother, amounting to the sum of \$1,572. Upon the consent of the relatives of the patient the secretary of the State Commission in Lunacy was appointed guardian by order of court on August 15, 1913. Payments are now being regularly made to the hospital.

REPORT OF AUDITOR.

To the State Commission in Lunacy.

GENTLEMEN: I herewith submit my report on the deportation of alien and non-resident insane, and your attention is respectfully called to the accompanying tables. On June 30, 1914, the hospital population was 8,742, of whom 4,197 were of foreign birth, or 48 per cent. The deportations represent 8 per cent of the discharges for the biennial period and 8.7 per cent of the foreign admissions for the same period.

With the effectual cooperation of the State Board of Control and the State Hospitals we have returned to their native villages 125 Chinese at a per capita cost of \$93.80. The average hospital residence of the 125 Chinese was eight years, and it is safe to say that their average hospital life would continue for a like period, as the Chinese, under the care and treatment received in our hospitals, are a long lived and healthy portion of the hospital population. This movement of the Chinese was accomplished without extra cost to the state as the expenses thereof were defrayed from the appropriations for support of the several state hospitals. It will readily be seen that the movement was a good business proposition for the state. While the per capita cost of the movement was \$93.80 the per capita cost of maintenance for the sixty-fifth fiscal year was \$196.70. The cost of the movement was charged to the appropriation for support for the sixty-fifth fiscal year, while the benefit to be derived will be spread over a period of from eight to ten years.

Citing the above as an example of what can be done along these lines, I would most earnestly recommend that an appropriation of \$10,000 per year be provided to carry on this work. Of the 3,728 admissions to the state hospitals for the insane during the biennial period, 2,485 are reported as natives of states other than California. We consider 5 per cent as a very conservative estimate of the above 2,485 as strictly non-residents and with available funds would be able to relieve the state of the unjust burden of their support and maintenance.

As an index of the volume of the alien insane you are advised that 290 cases were investigated. Of this number 75 were deported on United States Government warrants and 97 by the Commission.

With hearty cooperation and aid of the United States Immigration Service I am pleased to report the deportation of alien insane in a very satisfactory condition.

With the opening of the Panama Canal and the Panama-Pacific Exposition we looked forward to a large increase in foreign immigration. The European war has, undoubtedly, checked this anticipated influx. While there has been a very decided decrease in immigration from the war zone its effect on the deportation of alien insane has not yet been felt, and in all probability will not be felt for the next two or three years.

Respectfully submitted.

CHAS. F. WAYMIRE,
Auditor State Commission in Lunacy.

STATE OF CALIFORNIA,) ss.
County of Sacramento,)

CHAS. F. WAYMIRE, auditor of the State Commission in Lunacy, being first duly sworn, deposes and says that the above financial statement is correct.

CHAS. F. WAYMIRE,
Auditor State Commission in Lunacy.

Subscribed and sworn to before me this 31st day of October, 1914.

J. J. CALELLY, JR.,
Notary Public in and for the County of Sacramento, State of California.

REPORT OF MEDICAL SUPERINTENDENT, STOCKTON STATE HOSPITAL, 1913.

STOCKTON, CALIFORNIA, December 10, 1913.

To the honorable Board of Managers, Stockton State Hospital.

GENTLEMEN: I hereby submit to you my annual report of the movement of patients, moneys received and expended, and other business transacted at this hospital.

The past year has been a favorable one for the institution. The last session of the legislature was very liberal to us in regard to appropriations for new buildings and improvements about the institution.

The sum of \$58,000 was appropriated for the erection of a new building for the better class of male patients—this will relieve our crowded condition to some extent and at the same time provide a very comfortable home for 120 inmates. The dormitories will be open, so that most of the year patients will practically be sleeping out-of-doors; windows being provided in case of bad weather. Thirty-six thousand dollars was appropriated for a model dairy barn to be erected at the farm. Plans for the same are now being prepared by the State Architect, and building will commence shortly after the first of the year. Fifteen thousand dollars was appropriated for reflooring the male and female buildings. This work, practically completed, adds greatly to the appearance of the buildings, as in many of the halls the flooring was badly worn. Fifteen thousand dollars was appropriated for the installation of a new heating system at the male building. This work is now being carried on, and upon its completion we will be able to consolidate the power plants, thereby effecting a great saving in fuel and help. Six thousand dollars for an elevator at the female department was also appropriated. The contract for this work is about to be let and its installation will be a valuable addition to the building.

During the past year, a great improvement has been made in the business management of the institution. A new system of accounting installed by the Board of Control has worked out very nicely and is a great aid, not alone to us directly connected with the institution, but also to the Board of Control and Lunacy Commission; enabling all interested in the management to keep in close touch with the receipts and disbursements of moneys and merchandise received at the hospital.

Our work in re-education has been very satisfactory—patients who were stupid and untidy before entering the class are now cheerful, showing marked improvements in mental condition and habits. Quite a number have gone home, not all of them cured, but improved to such an extent that their own people are able to care for them.

The results at our hydrotherapy building have also been very satisfactory, many patients recovering in a short time, who without the care and treatment received in this department would have made a much slower recovery, and possibly would never have gained a normal mental condition.

We have sterilized 92 patients during the past year: 64 men and 28 women. The law authorizing superintendents of the different hospitals to sterilize certain class of patients is the most important law, relative to the insane, that has ever been passed in this state. The operation is very simple; the men are up and about the second day; in fact, there is no necessity of their going to bed at all, the only object in doing so is that they are insane and we think it best to take this precaution. The women remain in bed a few days longer. At first the patients made some objection to the operation, but now they think nothing of it; in fact, I have had several requests from the patients themselves that they be sterilized, as they have noticed the improvement in others as results of the operation.

We all feel through the interest displayed by physicians and nurses that the conditions of the patients at this hospital are excellent. They all seem to be using their best efforts to make those under their care comfortable and happy, and to do everything possible to expedite their recovery.

Last spring we had a mild outbreak of smallpox, 17 patients having the disease, but as those affected were promptly isolated and every one in the hospital vaccinated, it gave us but little trouble.

I wish to express my thanks to you, gentlemen of the Board, for the courtesies extended and the assistance given me in the administration of affairs of the hospital.

Respectfully submitted.

FRED P. CLARK,
Medical Superintendent.

REPORT OF MEDICAL SUPERINTENDENT, 1914.

STOCKTON, CALIFORNIA, December 2, 1914.

To the honorable Board of Managers, Stockton State Hospital.

GENTLEMEN: I hereby submit to you my annual report of the movement of patients, moneys received and expended and other business transacted at this hospital.

The various improvements for which we received appropriations at the last session of the legislature have about been completed with the exception of the model dairy barn on which work has just started.

Appropriations to be asked for at the coming session of the legislature are as follows:

Additional wings to receiving and hydrotherapy building.

Two additional wings to our hydrotherapy and receiving building. This addition is very necessary, as our present receiving hospital has not the capacity to accommodate and treat the increasing number of patients received. At the present time, disturbed and quiet patients are quartered in the same ward. The new additions should consist of dormitories where the quiet patients and those with suicidal histories could be kept. This arrangement will be a great improvement over our present condition, as oftentimes a quiet, apprehensive patient's condition is aggravated by noisy and disturbed ones.

Convalescent hospital for women.

A convalescent hospital for women is very necessary, as at the present time all classes are kept in the same building, although, of course, in separate departments. If the convalescent patients could be removed to another building where they could be by themselves and not come in contact with the chronic or disturbed types, their convalescent period would be much pleasanter and their recovery hastened.

General hospital.

A general hospital should be erected where the men and women who are suffering from physical ailments and also those who require special diet and attention can be cared for. A building of this kind would be of great benefit to the patients, as many who are now cared for in our main buildings, could be looked after to a much better advantage in a properly arranged hospital.

Physicians' residence.

A flat containing four apartments for additional physicians is one of our urgent necessities. Our medical staff is far below what it should be in numbers, and it is our intention to ask for four additional physicians. With these additional men our staff would be in keeping with the number of patients in the hospital.

Lighting system.

Our lighting system about the grounds is unsatisfactory and dangerous, as at the present time the grounds are poorly lighted by overhead arc lamps fed by naked wires carrying heavy voltage of electricity. These arc lamps should be replaced by electroliers and the wires placed

underground in conduits, as on several occasions they have been broken by coming in contact with trees during stormy weather, thus endangering the lives of patients and others.

A new boiler.

A new boiler should be installed at the female department, from which plant all our buildings are now heated. Our present boiler capacity is not sufficient to properly heat the buildings on the days when it is necessary to clean boilers. This additional new boiler would enable us to shut down the boiler plant at the male department, thereby consolidating our entire steam plant and effecting quite a saving in fuel and help.

Isolation hospital.

An isolation building should be erected to care for suspicious cases and others who develop contagious diseases. At the present time we have no such building.

Tubercular hospital.

A tubercular hospital for those suffering from tuberculosis is a great need at this institution in order that this class of patients can be separated from the others. At the present time we have sleeping porches for our tubercular patients, but they are not as well isolated as they would be in a separate building. While we have comparatively few cases suffering from tuberculosis, they should, without doubt, be removed to a separate building where special care and attention could be given them.

Sidewalks.

An appropriation is to be asked for to construct new concrete sidewalks about the place. This is necessary, as many of our walks are gravel and during the winter months they are almost impassable.

Buildings at farm.

An appropriation is to be asked for to construct a hay barn at the Farm. This is made necessary by our increased hay crop and at the present time we have not enough barn room to accommodate alfalfa and oat hay, which is raised on our Farm. Silos, calf pens, etc., should be erected to complete our present dairy barn, as a sufficient sum was not appropriated at the last session of the legislature to care for these additions.

Hydrotherapy.

We have had very gratifying results from treatment of our acute cases by hydrotherapy—both in the continuous baths and the pack

room. I feel confident that our marked success with this form of treatment comes from the fact that we have thoroughly trained and competent people in charge of these departments, and the treatments are carried out as prescribed by the physicians.

I believe, in some institutions, it is customary to use nurses who have not been especially trained in hydrotherapy to administer this treatment. To my mind, this is as grave an error as to place an untrained or inexperienced person in the drug room to fill prescriptions. Unless the operators have had special training in hydrotherapy, it is hard for them to understand that it is very easy by improper treatment, to aggravate the conditions they are trying to remedy. By administering the water at too high or too low a temperature, in a prolonged bath—a variation either way of two or three degrees from the temperature prescribed, will often chill the patient or cause too great a relaxation, resulting in collapse. It is hard for untrained nurses to realize this and the physicians in charge are often disappointed in cases they feel should recover, but whose recovery has been retarded by the improper administration of the bath.

Surgery.

Considerable surgery has been done at the hospital the past year. The work has been attended with marked success. Since the law permitting sterilization of patients was passed two years ago, we have sterilized 237 patients. Of these 159 were men and 78 women. Sterilization is a very important feature of the work connected with the insane, not alone to posterity, but also to the patients themselves. In my opinion every patient, man or woman, under fifty years of age who is committed to an insane hospital, if there is a prospect of recovery, discharge or parole, should be sterilized.

A great number of our male patients have shown marked improvement in their mental and nervous condition following this operation, and I have had six men ask for sterilization, as they had noticed the beneficial results of the operation on other patients. Those who have been benefited by the operation state that they have noticed an improvement in their mental and physical condition in about four weeks' time.

Re-education in dementia præcox cases.

Re-education among our dementia præcox patients has proved very satisfactory the past year. Many patients who formerly sat about the wards, destructive and untidy in their habits, now enjoy drills, calisthenics, dances, basket ball games and other amusements during the morning hours. The afternoons are devoted to basket weaving and all forms of fancy work. A number of these patients have improved to such an extent that they have been able to return home. Others

who have not, nor never will reach that stage, are now happily occupied and their relatives can visit them with a great deal of satisfaction, where formerly their visits were unsatisfactory to themselves and unappreciated by the patients.

An additional teacher has been engaged to take up the same line of work among our convalescent patients. During the summer months this work will be carried on out of doors. When the weather is disagreeable, our gymnasium, which is about completed, can be used. We hope from time to time to increase our force of teachers in re-educational work so as to be able to have all the convalescent patients, and others whose mentality will permit of it and are not occupied in the various industrial departments about the hospital, busy part of the day at least, with some form of industry or amusement, thereby improving their mental and physical conditions.

Wasserman tests.

All patients admitted to this hospital have a Wasserman test made of the blood and spinal fluid. This examination has been a great aid to us in helping to diagnose many obscure cases which have afterwards been benefited and restored to their normal condition by the use of salvarsan and other anti-syphilitic remedies.

The Board of Control and the Lunacy Commission have always been ready to grant our every request for the various appropriations which we have asked for whereby the patients might be made more comfortable and their recovery hastened.

I wish to thank you, gentlemen of the Board of Managers, for your hearty cooperation in my administration of the affairs of this hospital.

Yours truly,

FRED P. CLARK,
Medical Superintendent.

REPORT OF MEDICAL SUPERINTENDENT NAPA STATE HOSPITAL.

To the honorable, the Board of Managers, Napa State Hospital.

GENTLEMEN: I take pleasure in presenting to you my first report for the biennial period from July 1, 1912, to July 1, 1914, which is the twentieth biennial report of the Napa State Hospital since it was opened.

When I took charge of the institution upon the resignation in January, 1913, of Dr. A. E. Osborne, who had been directing its affairs during the year 1912, I found the hospital overcrowded with 2,028 inmates, including voluntary cases (1,181 men and 847 women). Some relief from this overcrowded condition was gotten when (August 20, 1913) 100 patients were transferred to the Agnews institution and a further slight thinning-out in the number of patients of some wards resulted when two cottages in the Phillips group were completed December, 1913. The relief has, however, been far from adequate as yet, because of the emptying of the invalid cottage of the north to allow its alterations and enlargement into a cottage for acute, disturbed cases, and because there has been a steady increase in the admission of new patients during the past year.

On July 1, 1914, we had 2,082 patients; a gain since the transfer in August, 1912, of 85 patients and a total of 44 patients more than the total number of inmates on July 1, 1912.

I am pleased to report that the health of the inmates has been, generally, very good. The deaths have been about one per cent less in the second than in the first year of the biennial period. We have three times had an outbreak of diphtheria, but in each instance the number of cases has been confined to the patients first discovered. The development of typhoid fever in a female patient in August, 1913, which was traced to food sent the patient from an infected community of the state, was the only instance of the kind during the period. The isolation was made by removal to a small quarantine station hastily constructed.

The medical work at the hospital has been making strides forward in the clinical and pathological study of cases, aided by the addition to the staff of an efficient pathologist and an interne from the medical department of Stanford University, who, after his graduation in medi-

cine, spends two months at the hospital, and is succeeded during the year by five other graduated physicians, who serve successively for the same length of time. The interne has proved to be of such marked benefit to the medical service in assisting in the working up of clinical histories and in the carrying out of individualized clinical studies, etc., that it is hoped that the coming year will see a second interne added to the staff. The opportunity to acquaint themselves with the rudiments of psychiatry afforded the six young physicians who yearly serve as internes, equips them for better work in the community along these lines.

A considerable amount of surgical work has been done when indicated at the hospital during the past year, including capital operations and sterilizations. A number of cataract operations and operations in the nose and throat have also been performed, for which the institution is indebted to Drs. L. D. Green, A. S. Green, and H. Barkan of San Francisco, who have gratuitously given much valuable attention to inmates.

The pathologist has made a splendid record in the routine laboratory work done during the past six months. He has had as his assistant a college graduate, who happens, at the present time, to be an inmate of the hospital. The great amount of material at hand and the numerous problems presenting themselves require new and larger quarters. The present ones are confined to two rooms in the basement of the receiving building. It is, therefore, very essential that an appropriation for the erection of an adequate laboratory building, with autopsy facilities, be granted by the coming legislature. The building of such a laboratory might lead to the development of a central pathological department for the four northern state hospitals, for whom, individually, the state might not be able to furnish so elaborate an outfit.

The east wing of the receiving building, which had been left vacant for three years following its completion, was occupied by male patients in December of 1913, after three continuous flow baths had been installed in this as well as in the west, or female wing of the building.

In the past all patients admitted to the hospital were taken to this building, but it has become necessary to modify this practice so as to exclude the most noisy and violent patients who are a more or less constant source of annoyance and stimulation to pathological symptoms in the more quiet, acute cases. It is for this reason that the so-called North Pay Cottage is now being enlarged and reconstructed for a watch ward for the acute disturbed male patients, who will be placed in a large dormitory constructed and provided with folding doors so that patients may be isolated when necessary for periods of short or long duration, all of these alcoves being open at a central point, where a nurse in charge is stationed.

In order to give the acute disturbed among the women patients the same careful watching and access to the necessary hydrotherapeutic equipments, with which each cottage is to be furnished, it is hoped that an appropriation will be obtained this year for a similar alteration of the South Pay Cottage.

These cottages are located at a sufficient distance from the main building to prevent annoyance by noisy patients of inmates in other parts of the institution.

The detached cottages, for chronic female patients who are along in years, originally numbered fifteen, of which one was occupied by nurses. Under an appropriation from the legislature this complex has been enlarged this year by the addition of three cottages of the same size, one of which, the hospital cottage, has been equipped for the temporary care of patients, who might be seized with a sudden physical illness or mental attack. This cottage has at one end of it a nurse's room, a dressing room, etc. These small wooden buildings, each accommodating not to exceed twenty patients, are placed in rows on each side of a central building containing two large dining rooms and two sitting rooms, allowing the segregation of the quiet from the slightly restless or less tidy patients.

This enlarged central building has been furnished with clothes rooms, bathrooms, washroom and toilets on the east, and with a larger serving pantry at the opposite end. The sitting and dining rooms just described are well heated, as are six of the cottages; the remaining twelve are not.

The patients, however, spend most of the day in the open, some of them the whole day, and during nearly the entire year are perfectly comfortable in the open air. The cottages therefore serve as a sort of wooden tent to them, which they occupy only when in bed or when dressing and undressing. The 240 patients cared for here prior to the recent enlargement have been healthier and apparently as comfortable, winter and summer, as the remaining inmates. There has been less sickness among them.

The drying yard and berry patch between this building complex and the rear avenue are to be done away with and the ground parked. We hope after a time to be able to remove the part of the fence enclosing the playgrounds and garden around the cottages, which will front this new park, thus making the complex in part open cottages.

The end of the year 1913 saw the completion of two brick buildings, which, with four others previously constructed, make a complex of six so-called parole cottages, in the case of one of which the name, however, is misplaced. This building is connected with a large yard enclosed with a wire fence, in which fifty patients spend most of the day, mostly elderly or old men, some of whom would be apt to stray away if left at large in the care of one or two attendants.

Another of the six cottages is used for the care of the invalids or bedridden cases. Each cottage is a large dormitory for fifty patients, provided in the case of the two new structures with sleeping porches. Between the two rows of three cottages each is a central building serving as a common sitting room, dining room and pantry for the 350 patients, with the exception of the bedridden cases and the fifty inmates of the closed cottage, which is provided with special sitting and dining rooms. A seventh unit to accommodate about sixty patients is about to be erected to the east of these cottages; a building for convalescent patients, who during their first experience in hospital occupations are apt to have recurrences, or may show remnants of acute mental symptoms, and who, in this unit, can find the necessary isolation or special observation facilities which are not on hand in the other cottages.

The accommodations for the care of the bedridden and invalid patients have from the beginning, not been satisfactory in Cottage No. 3 of this complex. This cottage, like the rest, was built for the working patients that have been granted parole, and is needed for this purpose. It is, therefore, proposed to care for these invalids and for the invalid women, who are at present in the South Pay Cottage, in a new hospital for physical ailments and invalidism, segregating the two sexes in each wing, and placing the entire building in charge of female nurses, under a matron. It is suggested to place the building on the north side of the avenue, with the new laboratory between it and the Recreation Hall. This recently completed building (the Recreation Hall), located just outside of the cypress hedge which outlines the large park grounds in which the male patients exercise daily, will accommodate 800 patients on the floor and 110 in the gallery. It is a one-story structure built with eight exits, six of which are on the sides of the building. Through one of the three exits facing east the patients will enter along an alley way extending from one of the towers of the main building to the hall. The main entrance to the new recreation hall has on one side a spray room for use in connection with gymnasium work in the hall, and on the other, a large room where the medical conferences are to be held on three afternoons of the week.

To the employees' club room was last year added an adjoining large room for their accommodations. Their comforts during leisure hours as well as in general when not at work are, however, still very deficient and will remain so until nurses' homes are erected. It is hoped that an appropriation for the first building of this kind will be secured next winter. The home should be a two and a half story concrete or brick building to accommodate about nineteen married couples and sixty unmarried women nurses. It will probably require nineteen rooms with one bed and twenty rooms with three beds each. The building,

therefore, will have to contain about forty rooms on the two floors. There would have to be separate reading and reception rooms for each class of employees in the basement.

The institution has been enabled by appropriations made by the last legislature to make a number of improvements in the direction of the physical welfare of the inmates, viz: the installation of a new heating system for the supply of heat to all parts of the main building, as well as to the outlying cottages and residences along economic and efficient lines; a new electric lighting system, which has placed electric ceiling lights in nearly all the rooms occupied by patients, all lights being controlled by patent lock switches; a new telephone system with single lines to every ward and signal lights instead of bell ringing in the psychopathic wards for the acute, quiet cases; a new laundry—one story brick structure 185 feet long; a concrete dairy barn, to accommodate 200 milch cows, is in process of construction with two silos and a new milk room and dormitory for the accommodation of milkers and patients employed about the dairy. In all details, the dairy promises to be a model one—the most up-to-date public dairy in this state. Not only will this be the case, but the herd of dairy cattle has been greatly improved, especially by the purchase of registered cattle. All this has been accomplished through the competent advice and efficient management of the steward, who was an experienced dairyman prior to his employment by the state, July 1, 1913. The improvements for the comfort of the employees and patients at the Spencer and Smith-Brown ranches are also due to his initiative.

The reclamation of the lowlands of the hospital, which is proceeding at the time this report is being written, will enable the institution to raise most of the hay and potatoes annually needed, the more elevated part of this land having previously been equipped for an irrigation plan which will allow the water to reach the bottom land when required.

The hygiene of the hospital has received due consideration. A small quarantine hospital has been erected and up-to-date toilets have been installed in the large park in front of the main building, where 750 to 800 men and women spend several hours forenoons as well as afternoons on most days of the year. Last year the patients missed the outdoor exercise in these grounds on but ten or twelve days out of the 365.

Just as the Panama Canal could not have been built without provision by Colonel Goethals for a healthy, contented working force, so can a hospital for the insane not fulfill its mission of properly caring for its inmates without having the means of making its nurses and officers comfortable. It is to meet local requirements that the Board of Managers have given their sanction to a request for the erection of two cottages for the use of officers who are obliged to live with their

families on the third floor of the main building. The inattention to the welfare of its employees is undoubtedly, in part, the reason for the inferior quality of attendants and nurses often met with in state hospitals. If the housing of nurses is improved upon by providing nurses' home, we shall more easily acquire a better grade of caretakers, a set of nurses, who will not only strive to be vigilant, but who, under proper leadership, will give individual attention and aim of what has been called "reconstructive nursing."

I am very glad to report to your honorable Board that the proper *esprit de corps* exists among the officers and employees of the institution and that all are falling in line for the "team work" required to secure a successful administration.

Respectfully,

ANDREW W. HOISHOLT,
Medical Superintendent, Napa State Hospital.

REPORT OF BOARD OF MANAGERS, NAPA STATE HOSPITAL.

To the honorable, the State Commission in Lunacy:

GENTLEMEN: In addition to the reports of the medical superintendent and secretary and treasurer, the managers of the Napa State Hospital desire herewith to respectfully submit to you their report for the past two years.

The regular meetings of the Board, and called meetings by the president, have been well attended, the minutes of each meeting having been submitted to your honorable body, and we respectfully refer to them. Our former president, Mr. John S. Chambers, having been appointed by his Excellency, Governor Johnson, as State Controller to succeed Mr. A. B. Nye, deceased, we congratulate him and Governor Johnson in his selection to this honorable position which he so ably fills. Mr. Emmett Phillips, having been formerly president of the Board of Managers, was elected president to succeed Mr. Chambers. Mr. Thomas B. Dozier whose term expired as a member of the Board of Managers, Mr. C. J. Corcoran of San Francisco was appointed by Governor Johnson to fill the vacancy. Dr. J. W. Clark of Santa Rosa having resigned as a member of this Board, Mr. H. J. Widenmann of Vallejo was appointed by the Governor to fill the vacancy.

Dr. A. W. Hoisholt, who was a member of the medical staff of the Stockton State Hospital, having had many years of experience in this line of work, was elected to the position of medical superintendent to succeed Dr. A. E. Osborne, resigned. The staff now consists of Dr. A. C. Matthews, Dr. J. B. Rogers, Dr. G. W. Ogden, Dr. E. F. Donnelly, Dr. Lena A. Geraldson, and Dr. W. T. Harrison, pathologist.

A new and up-to-date cold storage and ice plant, so much needed for the hospital, was installed about one year ago in the old carpenter shop, and with an addition thereto, makes a very complete building at a cost of \$15,000, granted at the session of the 1911 legislature. The carpenter shop, which had been in the center of the group of buildings, was moved to the outside of the group, including the tinner's and upholsterer's shops.

The old irrigating system, having been condemned, an entire new system of piping and pumping plant has been installed. The pumping plant consists of a 10-inch centrifugal pump driven by a high power electric motor to draw water from the Napa River to irrigate the vegetable gardens and the low land adjoining, and also the alfalfa

land for the dairy herd, all costing \$10,000, appropriated by the 1911 legislature. In addition to all the above, a direct line connecting the Spencer Ranch water supply with the settling tanks and valves, has been installed in the pipe so that the flow of water could be controlled.

On account of the dry winters of 1911 and 1912, the managers had recourse to boring two wells, one to a depth of 486 feet, installing pumping plants on each well. Sufficient water was secured to help over the seasons of dry weather of those periods, and will be used in the future, if required.

The steam heating was in such bad, and even dangerous, condition that the managers received permission from the Board of Control to commence the renewing of the piping system under the Administration Building, taking the money from the contingent fund until the money appropriated by the 1913 legislature was available. This system will heat all the buildings on the hospital grounds from a central point—the power house boilers—eliminating the unit heating plants and the fireplaces as much as possible, and the danger from them of fire. This work has been progressing favorably by day labor, and when finished, will do away in a great measure with the use of coal, substituting oil for fuel, and a consequent great saving to the institution.

A new fire fighting equipment, consisting of one hook and ladder truck, six chemical engines—one on each floor of the Administration Building, and one each in the Phillips and Dozier cottages, and one in the Receiving Building; also fifty fire extinguishers, distributed through the various buildings where necessary; also 5,000 feet of fire hose which is attached to hose reels in lengths to suit the situation for use when needed. The fire apparatus was paid out of the contingent fund.

The old electric wiring in the Administration Building having been found defective and dangerous, has been replaced with new wiring for telephone, lighting, and power. The telephone wiring was found inefficient and has been replaced with a new switchboard which is very satisfactory.

The managers after making their plans and consulting with the Board of Control, asked for the following appropriations from the 1913 session of the state legislature:

For remodeling the North Pay Cottage.....	\$10,000 00
For laundry building and equipment.....	25,000 00
For dairy buildings for 200 cows.....	20,000 00
For farm dormitories and sheds.....	10,000 00
For rewiring Administration Building.....	15,300 00
For reclamation of overflowed land.....	10,000 00
For remodeling women's cottages, and building new men's and women's cottages	20,000 00
For new boilers for power house.....	7,000 00
For dining-room and equipment.....	12,500 00
For completion steam pipe heating system.....	20,000 00

We regret that none of the improvements are finished for which the money was appropriated by the 1913 legislature, except the electric wiring of the Administration Building. Referring to the above, and the work to be accomplished, the managers are hopeful that all the work will be completed before the year 1915.

A new and much needed recreation and athletic building of ample dimensions, consisting of a large auditorium, a stage, dressing rooms for both sexes, a moving picture fireproof room, steam heating plant, accommodating eight hundred people, has been built at a cost of \$15,000—paid out of the contingent fund.

The old toilets in the male and female yards had become insanitary and new toilets of the latest type—twenty-four of them—have been installed. This has also been paid out of the contingent fund.

Two cottages have been added to the Phillips group which were much needed and are occupied, costing, with sleeping porches, \$15,000—paid out of the contingent fund.

A new rock crusher has been installed in a favorable location for fine rock and for loading the crushed rock on the wagons from the bins. This rock is being sold to the contractor of the dairy barn and will be used also for macadamizing the roads about the hospital grounds. Cost \$1,500, and paid out of contingent fund.

The managers earnestly recommend that the coming legislature grant the following appropriations:

For hospital for invalids and physical diseases for both sexes.....	\$75,000 00
For remodeling South Pay Cottage to serve acute and disturbed cases..	15,000 00
For home for employees—married and single.....	50,000 00
For laboratory—which the medical superintendent says is much needed	15,000 00
For purchase of the Kruse Ranch (our water supply runs across this ranch in the open).....	7,500 00
For replacing tower on Administration Building (destroyed by the earthquake of 1906).....	10,000 00
For new machinery for laundry.....	4,000 00
For two cottages for officers.....	6,000 00
For workingmen's home at Smith-Brown ranch.....	10,000 00

The Board of Managers desires to express its appreciation of the kindly treatment it has always received from the State Commission in Lunacy and the Board of Control, and with the spirit of harmony which prevails in the Board, and with the efficient work of Dr. A. W. Hoisholt, the medical superintendent, also with his staff officers and the corps of employees. All is most favorable for the coming year's work.

Respectfully,

EMMETT PHILLIPS, Chairman.
DAVID RUTHERFORD.
H. J. WIDENMANN.
C. J. CORCORAN.

GENERAL PARESIS AND ITS RELATION TO SYPHILIS.

By A. W. HOISHOLT, M. D.,

Medical Superintendent, Napa State Hospital.

General paresis, general paralysis of the insane or softening of the brain was first spoken of by Willis in 1672, but was not recognized and described as a disease entity until 1822, when the French alienist, Bayle, pronounced the somatic and psychic symptoms manifestations of one and the same disease. From 1822 to the middle of the last century, the efforts of investigators were centered on clinically outlining the disease-picture. At the end of the fifties, observations began to be made of the frequent occurrence of syphilitic infection in the history of general paralytics. Esmarch and Jessen in 1857, Steenberg in 1860, and Jespersen in 1874 first drew attention to this relationship; the latter in an article entitled "*Is Progressive General Paresis Due to Syphilis?*" Careful statistic researches in this direction were later made by Westphal, Erb, Fournier and Krafft-Ebing, and in the course of years, the percentage of general paresis, showing a history of probable syphilitic infection, gradually rose until it reached 85 to 90%, and in the cases of juvenile paresis, even higher. The medical profession was therefore quite ready to accept the results which were established by the Wassermann and Noguchi reactions, the Nonne—Phase I reaction of globulin increase, and the increase of the lymphocytes in the cerebrospinal fluid. Since these sero-diagnostic tests (known also as "the four reactions") have been recognized as indicators of luetic nerve degeneration, the assertion that "Without a previous syphilitic infection, there can be no general paresis" has become generally accepted.

The question was finally definitely decided when Noguchi a couple of years ago succeeded in demonstrating the finding of *treponema pallidum* in the brain in about 25 per cent of 200 cases of general paralysis and especially when he, over a year ago, was able to produce typical syphilitic sclerosis containing the syphilitic micro-organism in the testes of rabbits by inoculation of an emulsion of the brain obtained from a parietic individual.

Although the direct relation of syphilis to general paresis has thus been established as an absolute fact, we are not able to explain why it is that paresis only occurs in about 2 to 5 per cent of all cases. Noguchi found in experiments on rabbits that, while luetic disease made its appearance in all body-organs soon after inoculation, it took three to five months before the lues invaded the brain, which he ascribes to the great power of resistance of nerve tissue to the invasion by the *treponema*. The specimens of the latter found in the brain show an attenuation

probably indicating a diminution of virility. It was thought by Kraepelin that intermediary products of decomposition, as in metabolic disease, may play a rôle in this resistance; especially has this been suspected in cases where alcoholism complicates lues. The influence of alcohol upon fatty substances may, according to Dr. Dedichen of Norway, cause a deterioration of the network of lipid substances, which penetrates the living cell and acts as a protection preventing the decomposition of the cell-contents by warding off the contact with substances foreign to the cell-body. According to research work by Bang, the lipoids are of perhaps greater importance to the human organism than the albumins, playing a role in the action of all enzymes and ferments.

But besides alcohol, there are other factors which may play a rôle in paresis. Some writers claim that general paralysis is a disease of civilization. Uncivilized peoples are but little or not at all susceptible, or only become so after they have become civilized. It is a well known fact that early generations of negroes, after immigration into the United States, seemed free from paresis, although they often became infected with syphilis. It is in the later generations of the colored race that paresis has been found increasingly prevalent. The same is true of Chinese and Japanese. I have observed but one or two cases of paresis among about 350 Chinese admissions to the Stockton State Hospital. About 80 per cent of the inhabitants of Abyssinia are said to be syphilitic, but paresis is not met with there. Norway and Iceland are said to be almost free from general paralysis. Westhoff, a German writer, is quoted by Dedichen as saying that he looks upon the disease as specifically one of the German race. He amusingly concludes that the higher the anthropological standing of a race, the more apt is such race to fall a prey to the disease.

A secondary influence upon the course of a case of general paresis is that of endogenesis or of endogenetic psychoses. Most authors speak of a hereditary disposition in 40 to 50 per cent of the cases. General paralysis has been divided into different forms. Kraepelin speaks of a demented, a depressive, a stuporous, a katatonic, a paranoid, an expansive, a circular, an agitated and a delirium tremens like form, which apparently is an expression of the mode of reaction of the individual to the morbid process. In many instances it would even seem that the varied psychotic pictures can only be explained by an accidental coincidence of two diseases, perhaps by another form of psychosis paving the way for the paresis or perhaps by the paralytic incipieny setting free a latent predisposition to insanity.

Notwithstanding the above recent developments in the relationship of lues to paresis, an understanding of the form of this relationship has not been reached. It has long been recognized that paresis does not

belong in the tertiary stage of syphilis and it was many years ago put in a category with *tabes dorsalis* as a para or metasyphilitic disease. Strümpell compared the relation of metasyphilitic disease to syphilitic infection with that of post-diphtheritic paralysis to the diphtheritic throat infection. It illustrates this relationship but the parallel is not completely covered when considering the progressive course of metasyphilis. Symptomatically, we are still in the dark. With all clinical and serological tests at our disposal, we still encounter great difficulty in the differential diagnosis of *lues cerebri*; especially between the disease pictures, which have been termed syphilitic pseudoparalysis, where there is a diffuse meningo-encephalitis, and paresis. No absolute differentiating symptoms have in fact, to date, been discovered. It is only by weight of evidence that one can distinguish them, and in individual cases, one may sometimes be absolutely unable to decide. A mental deterioration with the occasional presence to a more limited extent of somatic symptoms is more general in paresis; while the recording faculty is less faulty, the intelligence defects more prevalent in spots only, and the judgment less deteriorated in the cerebrospinal *lues* than in paresis. In the former there is lacking, as Professor Hoche of Freiburg, Germany, puts it, the peculiar veil which it is customary to find enshrouding the whole mental being of the general paralytic. In the former case, the patient likewise does not himself look with such complete indifference upon severe somatic symptoms present; the pseudoparalytic may even be hypochondriacal in reference to these symptoms.

As to the somatic symptoms themselves, they do not serve as a criterion between the two. The pupillary symptoms may be the same; the speech disturbance likewise, though the cerebral syphilitic patient is more apt to be aphasic or show speech defects of a bulbar type. Irregularity and rapid change in the course of the symptoms, and a slow development of focal symptoms without apoplectiform attacks, speak more for brain syphilis. A gradual progressive increase in symptoms characterizes the latter, as a rule, only up to the time when antisyphilis treatment is instituted.

Many physicians make use of the favorable result or failure of an anti-luetic treatment as a means of distinguishing between the two forms. As this therapeutic test frequently gives positive results in brain *lues*, it is well indicated, even if it sometimes fails where the syphilitic process is very diffuse, perhaps because of its non-reaction to our present syphilis therapy or because the treatment was started too late.

In most cases, however, the differential diagnosis is dependent upon a careful weighing of the different viewpoints and as Hoche says in his recent work, "there will undoubtedly remain a certain percentage of cases in which the most experienced will not be able, with certainty, to

make the differentiation between brain syphilis and paresis during the life of the patient, nor will he in such cases any longer be able with certainty to differentiate them by post mortem findings."

With regard to "the four reactions," it may be said that a high cell-count was formerly considered indicative of brain syphilis, but there are many exceptions. Dr. Harrison reports in 22 cases of paresis found among the patients admitted to the Napa State Hospital during the first six months of 1914 that the cell-count was in six cases over 100; in one case, 322, and in two others, 170 and 182, respectively. The variations in the remaining "three reactions" do not at the present day give one the means of differential diagnosis between these two conditions (brain syphilis and general paresis), which at one time was the current belief.

In July, 1897, I published in the "Occidental Medical Times" a statistical report of 69 cases of general paresis admitted to the Stockton State Hospital during seven years, inclusive of the years 1890 to 1896. Out of 1,345 first admissions the average percentage of paresis was 5.13 per cent. Since then no statistical reports have been made showing the prevalence of paresis in California. In publishing the appended statistics from the Napa State Hospital, covering the period since I assumed charge of the institution, it is realized that the figures are small and the period of short duration, extending over but one year.

The thirty-four cases have all been studied serologically, as well as clinically, giving the subject of the differentiation of the syphilitic pseudoparalysis from general paresis a careful consideration.

Period of admission	Males ad- mitted -----	Females ad- mitted -----	Total ad- mitted -----	Number paralytic men -----	Number paralytic women -----	Total number paralytics -----	Ratio women to men -----	Total percentage among men and women --
July 1, 1913, to January 1, 1914....	107	53	160	11	1	12	1:5.5	7.5
January 1, 1914, to July 1, 1914....	159	71	230	20	2	22	1:4.46	9.56
Total average -----							1:4.81	8.71

According to this table, 8.7 per cent of all mental cases admitted during the last year have been cases of general paresis. In addition to the 34 cases of paresis admitted during the year, we have received five cases diagnosed as cerebrospinal lues. Two of these are women: one with a history of a hemepligic attack a few months before admission, and complete restoration after antiluetic treatment; the other with history of miscarriage, certain somatic symptoms; sluggish pupillary reaction, absent left knee-jerk; fully oriented; no mental deterioration; Wasserman triple x in blood and liquor; cell-count 136, reduced to 35 after sal-

varsan treatment. The case appears complicated with a manio-depressive psychosis. Of the three men one has a history similar to the one just reported. A second case is an alcoholic pseudoparalysis with lues, with high cell-count; now fast improving. The third is also an alcoholic with symptoms dating back a number of years, and all four reactions positive. Even if the five brain-syphilis cases be added to the paresis, we get for the year a percentage of 10 per cent, which is considerably less than percentages reported abroad, where they have varied from 15 to 22 per cent. Women admitted to Napa State Hospital, judging by the above report (1:4.8), are 50 per cent less frequently sufferers in proportion to men than are women in Europe.

Napa State Hospital, October, 1914.

REPORT OF PATHOLOGIST, NAPA STATE HOSPITAL.

DR. A. W. HOISHOLT, *Medical Superintendent, Napa State Hospital:*

I present herewith a report of work done by the Laboratory during the biennial period ending June 30, 1914:

Blood serum, Wasserman reaction.....	754
Spinal fluid, Wasserman reaction;	
Cytology by Fuchs-Rosenthal method, and Noguchi butyric acid reaction..	182
Urine analysis, chemical and microscopical.....	1,243
Examination of blood, cell-counts, parasites, etc.....	204
Sputum	131
Stomach contents.....	45
Throat cultures.....	225
Fæces	51
Exudates	76
Water supply.....	11
Milk supply.....	19
Miscellaneous examinations of food products and other supplies.....	22
Autopsies (January, 1914, to June, 1914).....	25

A routine chemical and microscopical examination of the urine is made in all admissions, with such additional special examinations as will aid in the identification and treatment of disease.

During this period, the Wasserman reaction has been applied to the blood and spinal fluid only in suspected cases, but beginning with July, 1914, a routine examination of the blood serum is being made in all new admissions. An effort is also being made to extend this examination to the families of patients showing positive reactions.

On June 30, 1914, there were present in the hospital 52 patients showing positive Wasserman reactions in both the blood serum and spinal fluid—44 men and 8 women. Of these, all but three showed a definite increased globulin content in the spinal fluid, and all showed an increased lymphocyte count, ranging from 12 to 360 per cu. mm., more than 100 lymphocytes being observed in 13 cases. One additional case, a man, showed a positive reaction in the blood serum, but died before the spinal fluid could be examined. Post mortem examination showed the characteristic brain changes of paresis.

The original Wasserman reaction is employed, using as antigen a cholesterinized, alcoholic extract of human heart muscle. This reagent has been accepted as the most reliable, after having compared the results obtained with various extracts, including alcoholic extract of luetic foetal liver, alcoholic extract of normal organs, and the acetone insoluble fraction; the last two were found to yield unreliable results and were early discarded.

A series of 157 specimens, both blood serum and spinal fluid, were examined, using both the cholesterinized and the luetic extract in each case. Eighty-eight of these specimens, 53 blood serums and 35 spinal fluids, yielded positive results with the cholesterinized extract; 78 specimens, 48 blood serums and 30 spinal fluids, yielded positive results with the luetic extract. Lues was present without question in all cases reacting positively to the cholesterinized extract, as evidenced by definite involvement of the central nervous system.

The intensity of the reactions follows:

Blood serum.

	Complete inhibition	Partial inhibition	Slight inhibition
Cholesterinized extract -----	46	5	2
Luetic extract-----	36	5	7

Spinal fluid.

	Complete inhibition	Partial inhibition	Slight inhibition
Cholesterinized extract -----	30	4	1
Luetic extract-----	21	5	4

It will be observed that in the case of the blood serum 5 specimens responded positively to cholesterinized extract and negatively to luetic liver; of these, 2 showed complete, 1, partial, and 2, slight, inhibition to cholesterinized extract. Five spinal fluids also showed negative results to luetic liver, while to the cholesterinized extract, 4 showed partial, and 1, slight, inhibition. In all cases the maximum quantity of blood serum used was 0.1 c.c., and of spinal fluid 0.2 c.c.

The objection that the cholesterinized extract is perhaps too sensitive has not been proven in our experience, as in all cases we have been able to obtain a definite history of infection or clinical or post mortem evidence of lues.

Results obtained in the examination of a total of 300 cases, together with the case of preparation and comparative permanency of the cholesterinized extract has caused us to use it exclusively in routine examinations.

W. T. HARRISON, M.D.
Pathologist, Napa State Hospital.

REPORT OF MEDICAL SUPERINTENDENT, AGNEWS STATE HOSPITAL.

November 12, 1914.

*To the Board of Managers, Agnews State Hospital,
Agnew, California.*

GENTLEMEN: It hardly seems necessary for me to review in detail the past two years' transactions with which you are so familiar.

The tables attached, which are a part of this report, give much data in concise and convenient form.

I desire, however, to call your attention to a few points and to make some suggestions and recommendations. If you refer to the tables showing movement of population you will note the large number of admissions, 1,327 during the two years with a total net gain of 350, though our policy has been to discharge patients as fast as practicable. This steady increase of patients has overcrowded our wards more and more and rendered their proper care difficult. The population of California and consequently of our hospitals is increasing so rapidly it is difficult to meet this increase with adequate provision without overburdening the taxpayers. Will the next legislature find a way to give needed relief?

I submit whether it might not be wise to provide by bond issue sufficient funds to bring all our state charitable, reformatory, and penal institutions up to present requirements, as it is proposed to do with other state departments. It seems impossible by direct taxation to even keep, much less regain lost ground of adequate provision.

Notwithstanding our crowded condition and the large number of admissions to be handled by so small a medical staff, nevertheless I believe we have been doing good medical work and I can commend the interest and energy as well as the efficiency of the physicians and their enthusiasm in new lines of investigation and treatment. The staff at present consists of Drs. E. W. Mullen, C. W. Mack, Margaret White Cutting, and James A. Cutting. All have had good training and experience; all are doing good work, and the best work because they work harmoniously and cooperatively together. Two more physicians at least should be added to the staff.

While with the additions which have been made the past two years our treatment building is very well equipped for medical and surgical

work, still our equipment is not complete and I hope we shall soon be able to add more.

I am more than satisfied with our policy of open hospital, depending, not on barriers and too curtailed liberty, but on stimulating self-control and an understanding why here, on activity of work, diversions and amusements, on maintaining a general good feeling and contented atmosphere among patients and employees. Added to these pleasant and comfortable conditions and surroundings, kind and considerate treatment and evident sympathy and interest in them, a large proportion of our patients are reached and made, if not contented, at least willing to await our judgment about going out. The greater humanity and better results of such a method must be apparent to you and I am sure has your approval. Our effort is to make this a mental hospital and sanitarium and not an "asylum."

To make possible the ideal toward which we are working and have in great measure attained, it is necessary that every officer and employee must believe in its possibilities and maintain the right attitude of mind and heart. I believe we have a corps of officers and employees not surpassed in any similar institution in efficiency, faithfulness and adaptability; with a universal good feeling and loyalty toward each other and the management and a hearty cooperation that is notable. I can commend to you in highest terms the efficiency and faithfulness of our service.

I am convinced that the fitness of employees for this particular work must be determined largely by applied psychology and only when this is considered together with mental and physical fitness, and as the most important factor, can an efficient service be maintained.

In my last report I commended the law permitting self-commitment and after two years more of experience with it I wish to still more emphatically express my approval. During the past two years we have received fifty-six such voluntary patients and now have in the hospital fifteen.

All I said in my last report in opposition to the law permitting those addicted to alcoholic stimulants and drugs to be sent to the state hospitals, I wish to urge with greater emphasis. After further experience I can say I believe it is absolutely unjust and wrong to force this class upon the hospitals and the law should be repealed. Their association with the mental cases is detrimental to the latter and their residence in the hospital demoralizing. They are a class to be cared for and treated and disciplined quite apart from mental irresponsibles and with more complete segregation of the sexes. I sincerely hope the next legislature will take some action to relieve the state hospitals of this undesirable class.

I wish to renew and urge my previous recommendation of colonization rather than increasing the present hospital beyond its original plan. A larger tract of better land suitable for vegetables, fruit, and alfalfa should be procured. I believe we are agreed upon this and I think we should urge it as a desirable and economical proposition to be accomplished as early as possible.

In the mean time we ought to complete our hospital as originally planned. The buildings now under construction will complete the south half. The north half is still lacking three buildings.

I recommend that you ask appropriations for these buildings, together with certain other improvements and necessary maintenance as follows:

MAINTENANCE.

Support for sixty-seventh fiscal year-----	\$176,000 00
Support for sixty-eighth fiscal year-----	198,000 00
Total for two years-----	<u>\$374,000 00</u>
Salaries for sixty-seventh fiscal year-----	152,000 00
Salaries for sixty-eighth fiscal year-----	171,000 00
Total for two years-----	<u>\$323,000 00</u>

SPECIAL APPROPRIATIONS.

One workers' cottage, construction-----	\$52,500 00	
Furnishing -----	7,000 00	
		<u>\$59,500 00</u>
One convalescent cottage, construction-----	\$45,000 00	
Furnishing -----	4,000 00	
		<u>49,000 00</u>
One nurses' home (men), construction-----	\$43,000 00	
Furnishing -----	5,000 00	
		<u>48,000 00</u>
One staff house (physicians), construction-----	\$20,000 00	
Furnishing -----	4,500 00	
		<u>24,500 00</u>
One cottage for steward, construction-----	\$4,000 00	
Furnishing -----	1,250 00	
		<u>5,250 00</u>
Dairy herd of 100 cows-----		10,000 00
Dairy barn and equipment-----		25,000 00
Total of special appropriations-----		<u>\$221,250 00</u>

Nearly all this construction would directly or indirectly provide for patients, which is the great need. The workers' cottage and convalescent home directly, the nurses' home indirectly by releasing a building which could be so used.

A staff house would not only provide proper accommodations for the physicians but vacate a large farm house which could be used to great advantage for patients working on the farm.

The dairy barn and new herd, which we hoped to have provided ere this from our contingent fund, is badly needed for reasons well

known to you. I recommend that this appropriation be especially urged.

The estimates for construction are by the State Architect; those for furnishing by me.

The estimates for support and salaries are based upon 1,600 patients the first year and 1,800 patients the second at a per capita cost of \$110 for support and \$95 for salaries.

The buildings under construction will increase our patients to 1,600 for the first year, the number estimated for the second year supposes the construction of the buildings recommended.

Mindful of the responsibility of my position I appreciate your confidence and support for which I sincerely thank you and shall ever endeavor to merit.

Respectfully submitted.

LEONARD STOCKING,
Medical Superintendent.

REPORT OF THE BOARD OF MANAGERS, MENDOCINO STATE HOSPITAL.

For the Fiscal Year Ending June 30, 1913.

UKIAH, CAL., August 1, 1913.

To the State Commission in Lunacy:

GENTLEMEN: In accordance with law, we, the undersigned members of the Board of Managers of the Mendocino State Hospital, submit herewith our annual report, for the year ending June 30, 1913. The reports of the medical superintendent and the treasurer of the hospital are made a part of this report, and a careful examination of the same will show what has been accomplished during the last year.

The actual number of patients in the hospital on June 30, 1913, was 1,050, which is an increase of 22 patients over the number reported on June 30, 1912.

The general health of the inmates of the hospital during the past year has been good, and there have been no epidemics or contagious disease of any kind.

To fill the vacancy in the office of medical superintendent occasioned by the resignation of Dr. E. W. King, the Board appointed Dr. R. L. Richards, of San Francisco, who assumed charge on October 1, 1912. Dr. Richards has had experience in this line of work for many years, and is particularly well equipped for the position. He is managing the institution in a manner eminently satisfactory to this Board, and we feel that for such an important position we have made the proper selection, and we look forward with confidence to good results following our action.

The principal permanent improvements during the past year are as follows:

At the boiler room, a well 375 feet in depth has been bored, and a very fine water for boiler purposes has been developed, free from scale and sediment, and very excellent for laundry use. This well has been equipped with a steam pump, and it has been connected up with the steel water tank, and we are pumping over one third of the water used for domestic purposes into this tank. It is proving to be of great value this season, now that we are short of water in the reservoir.

At the dam and reservoir, the appropriation of 1911 has been exhausted. It is estimated that about one half of the work has been accomplished. The legislature of 1913 appropriated \$12,500 to com-

plete this work. This money will be available August 10th, and it is intended to push this work to completion.

The male cottage at the farm will soon be ready for occupancy. This is a well constructed building and will be very comfortable and will accommodate 50 patients and the necessary help. This will relieve the crowded condition of the wards, and give us more help at the ranch, and save the transportation of the working crew back and forth each morning and evening.

Work has been commenced on an earth and rock fill, below the present dam, calculated to strengthen and support the dam. This will be finished in about three months.

An addition to the attendants' cottage and to the dining-room at Ward No. 7, the outdoor colony, has been built, which very much improves conditions at this place.

A new mattress house and upholstering department is nearing completion, which was much needed.

Considerable equipment and instruments, etc., for operating room and laboratory have been purchased; also, a new dough mixer and a combined elevator, feeder and sifter for the bakery.

We have an appropriation of \$10,000 for the erection and equipping of a new gas plant, and this will be installed in the near future.

The total value of all products from the farm, gardens, dairy, etc., for the year, amounts to \$31,067.72, an increase of nearly \$3,000 over the previous year. This is due in large part to the pumping wells that have been developed and put in operation. The total value of these same products ten years ago, for the year ending June 30, 1903, was about \$9,000 from the same acreage.

In conclusion, we again desire to express our appreciation of the cooperation on the part of your honorable Commission and the State Board of Control, in assisting us with their advice in our efforts to keep this hospital up to the proper standard.

Respectfully submitted.

W. A. S. FOSTER,
A. J. FAIRBANKS,
JOHN L. McNAB,
G. D. CLARK,
A. HOCHHEIMER,
Board of Managers.

For the Fiscal Year Ending June 30, 1914.

UKIAH, CAL., June 30, 1914.

To the State Commission in Lunacy.

GENTLEMEN: We have the honor to submit herewith our annual report for the fiscal year ending June 30, 1914.

Accompanying this report you will find that of the medical superintendent, which shows in tabulated form the movement of population

and all the details of the general management of the hospital, and also that of the treasurer, which shows the financial transactions of the hospital for the past year.

The general health and sanitary condition of the hospital have been excellent; the patients have been carefully attended, well treated and made as comfortable as their unfortunate condition would permit.

General improvements.

Work at the dam and reservoir is progressing steadily and the construction of the dam itself will be completed this fall. There will then remain the clearing out of the reservoir of trees and brush. It is calculated that we can impound about 40,000,000 gallons of water in this reservoir. It is built of concrete and is strong, substantial and absolutely secure.

A heavy rock fill has been built on the lower side of the dam now in use to make this dam safe beyond any doubt and to protect it in every way for all time to come.

Concrete manure bins at the main stable have been built to take care of all manure and prevent the breeding of flies.

The mattress shop and upholstering department, mentioned in our last report, has been finished and is now in use.

The cottage at the farm, for male patients, is completed and about ready for occupancy. This was built within the appropriation and is a very attractive building and will accommodate the working patients and afford them a most comfortable home. Septic tanks to take care of the sewage and a large water tank and tower have been constructed, and the building connected with the hospital by telephone.

A shelter corridor in the rear yard, for male patients, built with a mission tile roof and concrete columns and floor, extending around the entire wall, is finished. This will shelter the patients from the hot sun of summer and the storms of winter, and will very materially improve the appearance of this yard and add much to the comfort of the patients. It is intended to construct a similar corridor in the yard used by the women in the near future.

A brick building to house the gas plant has been built and the machinery installed. The gas holder is being constructed and in a short time we expect to be able to manufacture gas.

Work has begun on a building for female tubercular cases, and it is expected that this will be completed and ready for occupancy before winter.

An eight inch pipe line, with swivel head hydrants, has been laid at the ranch for irrigating purposes. This system has proven most satisfactory and efficient. It was laid through the center of the alfalfa fields.

Appropriations.

The medical superintendent has estimated the amount necessary for maintenance during the two next fiscal years as follows:

For support -----	\$273,907 00
For salaries -----	207,893 00

SPECIAL APPROPRIATIONS.

New receiving building and equipment -----	\$100,000 00
Three electric elevators -----	7,500 00
New main pipe line -----	25,000 00
Nurses' home -----	20,000 00
Night watches' home -----	5,000 00
Repairs to plumbing -----	5,000 00

We have examined into the needs of this institution and we deem it our duty to direct your attention especially to the necessity of the above mentioned items, which appeal to us as being of the highest importance. The medical superintendent convincingly sets forth in his report to the Board of Managers the necessity of a receiving building for the proper care and treatment of all cases when first received; for a nurses' home and a home for night watches.

In regard to the two latter items the Board would further say that with the present facilities the nurses and attendants are forced to sleep in the wards occupied night and day by the patients. This deprives them of any semblance of home life. The medical superintendent calls for a building where they may sleep away from the strain, noise and disturbances which characterize their daily duty, and where they can spend their few off-duty hours in reading, study and legitimate recreation. In this way the service of a uniformly high grade of nurses and day and night attendants may be commanded.

There is no question as to the necessity of a new main leading from our reservoirs to the hospital buildings. The present main, which has been in use about sixteen years, has rusted out so that it is only a question of a short time until it will be unserviceable. As the water supply is one of the main arteries of the entire system here, we can not afford to neglect the putting in of a new main as soon as an appropriation can be secured and made available.

All food and other supplies have to be distributed to the various wards by means of elevators. The present elevators are worn out and liable to break and go out of commission at any time.

Owing to the fact that the main buildings are three and four stories in height the necessity of these elevators needs no argument.

Some very important repairs to the plumbing are urgent and a small appropriation is asked for to do this work.

In conclusion, we would say that such improvements do not disappear, but become a part of the entire hospital and add permanently to the value of the state's property and the institution's assets

We make the recommendations referred to in the strict exercise of our conscientious duty as the legally constituted guardians of this hospital.

If to any of them no response is made by the legislature, our duty is done, and the responsibility rests with that body.

Respectfully submitted.

W. A. S. FOSTER,
A. J. FAIRBANKS,
J. L. McNAB,
A. HOCHHEIMER,
G. D. CLARK,
Board of Managers.

REPORT OF MEDICAL SUPERINTENDENT MENDOCINO STATE HOSPITAL.

To the honorable Board of Managers, Mendocino State Hospital.

GENTLEMEN: I submit herewith, for your consideration, the following annual report for the fiscal year ending June 30, 1913:

In the table of movement of patients we have discharged thirty-six of the eloped patients, condition unknown, they having been absent from the hospital since its foundation up to two years ago, consequently we have had no knowledge of their whereabouts and condition. We have also dropped fifty-one of the paroled patients. Since these paroled cases have been able to maintain themselves outside of the hospital they were discharged as recovered. The removal of fifty-one names from the roll has caused an apparent decrease in population of twenty-eight, whereas the actual population has increased twenty-three.

Personnel.

Dr. G. W. Marvin, first assistant physician, resigned on December 10, 1912, after nearly thirteen years' continuous service. He desired to take a prolonged rest and visit Europe. It is to be regretted that he felt the necessity for this step.

Dr. F. E. Allen, second assistant physician, was appointed acting first assistant physician, and Dr. D. R. Smith was appointed acting second assistant physician, as previously reported.

Dr. L. R. Tyler, woman physician, resigned February 2, 1913, to take up another line of medical work.

Dr. Eva C. Reid from the Government Hospital for the Insane, Washington, D. C., was appointed third assistant physician February 6, 1913, and has very efficiently managed the female service since that date.

Buildings.

The male Farm Cottage, with a capacity of fifty, is nearing completion, and together with possible enlargements of Ward 7, will take care of our increase in population the coming year. The new mattress and furniture shop provides additional occupation for the male patients. With the increase in size of Ward 7, it has been found necessary to increase the dining room seating capacity by twenty-five, which has been done by adding a new wing to the present dining room.

All the dining rooms and pantries have been thoroughly screened to prevent flies gaining access to the food. A large reinforced concrete manure pit, additional concrete pavement at the kitchen, to insure further cleanliness, and other measures have been provided to prevent the breeding of flies. As a result of the work already done the number of flies has been very small this summer.

In a thickly settled community, such as this, there is constant danger of typhoid fever somewhere near the hospital and flies are common carriers of this infection.

Religious services.

It has been arranged that in turn the various Protestant denominations of Ukiah shall hold religious service each Sunday afternoon for the benefit of the patients. As hitherto, Father Sebastian visits the Catholic patients each week and says mass once a month.

Occupational and re-educational work.

We have succeeded in the past year in employing forty per cent of our patients in some form of actual work. In addition to work purely for the benefit of the hospital the women have made a great many fancy articles that have found a ready sale. The proceeds of the sale are divided as follows:

33 $\frac{1}{3}$ per cent to cover cost of materials used.

33 $\frac{1}{3}$ per cent credited to patients' personal accounts.

33 $\frac{1}{3}$ per cent placed to the credit of an amusement fund.

Since November, 1912, the amusement fund from this source has grown approximately \$60. But the especially important point is the beneficial therapeutic effect. Many patients, who were otherwise excited and destructive, became fairly quiet and efficient when occupied. Other patients volunteered to work and manifested unexpected skill when given the opportunity. The interest of the patients has not flagged in the least. The practical efficiency of this work is mainly due to the watchful direction of the matron and the female attendants under her.

Tuberculosis.

A testing of the Moro skin reaction of all the admissions for six months showed that the larger percentage of acute reactions were found among the recently admitted, which would tend to indicate that the conditions in the hospital were against the development of tuberculosis. However, the danger of overlooking active tuberculosis in the mental cases was evident when Dr. Reid in going over the female service found in the fifteen to twenty cases active physical signs which had been overlooked. These were promptly placed out of doors on the porches at the female cottage and have since that improved. The

danger of such cases in our larger wards and the need of frequent examinations is evident.

Ground parole.

As rapidly and as much as possible patients are being placed in the open air and given ground parole. Many quite chronic cases are adapted to this method of treatment. Gradually in the past six months D Ward has been made an open ward for women and the women come and go as they please during the day. All of this has resulted in an improvement, not only in the physical condition, but also to an even greater degree in the mental condition.

Restraint.

Restraint of any kind has been made use of during the past year only on the physician's written order, except that in an emergency it could be temporarily authorized by the supervisor or matron. An individual study of chronic cases in restraint has in each case either reduced the amount of restraint or demonstrated that it was unnecessary. For example, a little over a year ago there were between 20 and 30 usually in restraint in the female violent ward and now there are only two; one part of the time and one all the time. In general restraint has become necessary only, or chiefly, because of the large wards and the small number of attendants (1 to 19 patients).

Clinics.

During the year a more complete study and record of cases, in addition to the state blanks, has been established with the result that there are fewer unclear cases. Because the cases are better understood they are necessarily more intelligently treated. Even with this additional work we average 12 to 14 cases each week in our clinical conferences and an additional clinical stenographer has been found necessary.

Records.

All of the case histories, correspondence, autopsy reports, etc., since the establishment of the hospital twenty years ago have been segregated, classified, card indexed and so filed in filing cabinets that they are readily available. This has meant a great deal of extra work for the secretary and stenographers, but otherwise this information was unavailable unless many boxes of papers were searched.

In conclusion it gives me great pleasure to state that in my experience the officers and employees of the hospital are uniformly actuated by a hearty spirit of cooperation and that the success of the hospital is the chief aim and object of each one.

Respectfully submitted.

ROBERT L. RICHARDS,
Medical Superintendent.

REPORT OF MEDICAL SUPERINTENDENT MENDOCINO STATE HOSPITAL.

TALMAGE, CAL., July 1, 1914.

To the honorable Board of Managers, Mendocino State Hospital:

GENTLEMEN: I submit herewith for your consideration the following annual report for the fiscal year ending June 30, 1914:

It is seen from the table of movement of patients that our net increase of population this year is only 12 (number of patients remaining June 30, 1913, is 1,060 and number of patients remaining June 30, 1914, is 1,072). Our admissions increased 21 this year, hence it must be explained by the fact that by a careful study of the individual cases we have been able to discharge a larger number than could be provided for outside of the hospital. This may be taken generally as a good index of healthy medical activity in a hospital. In addition to thus providing a residence outside of the hospital for a larger number we have a larger increase of those voluntarily seeking early treatment for mental disease. We had one voluntary patient last year and have had eight additional voluntary patients the past year.

In attacking the problem presented by mental disease the two main points are the early, and hence more successful, treatment of such disorders and the making possible the existence of patients outside of the hospital so that the accumulation of chronic cases in the hospital may be reduced to a minimum. Always the largest part of the population of such a hospital is chronic cases.

Personnel.

Dr. F. E. Allen was regularly appointed first assistant physician and Dr. D. R. Smith, second assistant physician on November 15, 1913.

Dr. L. O. W. Moore was appointed interne on December 13, 1913, and upon the resignation of Dr. Eva C. Reid was appointed acting third assistant physician, pending the permanent filling of that position.

Dr. Eva C. Reid resigned her position as third assistant physician June 5, 1914, and accepted the position of After-Care Physician at San Francisco.

Inebriety.

The separation of mental and inebriety cases in this year's report is most desirable and shows that we are receiving a very large number

of inebriety cases. The reports of the different hospitals on June 30, 1914, show that Stockton and Mendocino state hospitals have on hand about twice as many inebriety cases as the other northern California hospitals. This has, however, given us a chance to study the problem more carefully and briefly we have come to the following conclusions:

First—The condition is after all largely one of mental make up of the individual. Approximately 85 per cent of the inebriety cases admitted show a mental age according to the Binet scale of not to exceed twelve years. In this estimate we have endeavored to rule out all cases showing previous efficiency and deterioration coincident with excessive indulgence in alcohol. In general the 85 per cent show poor or fair progress in school, a lack of steady or efficient occupation after school and frequently an indulgence in drugs or drinks or both, thus indicating unstable characters and an attempt to find compensation or relief outside of themselves. Consequently, we have come to feel that the treatment is firstly physical, and in this regard nearly always successful, but secondly mental which is much more prolonged and difficult. They are usually forty or more years of age and re-education is most difficult at that age. It is also more liable to be followed by a relapsing into their former manner of thinking and doing.

In fact, we are dealing mainly with that large class of defectives, who exceed the actively insane in numbers, and who are the most neglected and the most vital problem facing this generation from a medical or sociological standpoint. There has been a general erroneous idea among these patients and their friends that inebriety cases were rendered liable to insanity by associating with mental cases.

Second—The table given below, indicating the alcoholic drinks made use of by these patients, shows that they especially indulged in distilled liquors which are known (in contradistinction to fermented alcoholic drinks) to be especially associated with alcoholic mental diseases. Hence we have especially to do with the results of distilled alcoholic drinks.

Kind of liquor used by patients committed for alcoholism during the fiscal year ending June 30, 1914.

	Female	Male	Total	Percentage
Wine	1	4	5	5 per cent
Wine and whisky	1	3	4	4 per cent
Wine, whisky and beer	1	3	4	4 per cent
Wine and beer	1	0	1	1 per cent
Wine, brandy and whisky	1	2	3	3 per cent
Whisky	8	34	42	42 per cent
Whisky and beer	1	17	18	18 per cent
Whisky and brandy	0	1	1	1 per cent
Beer	2	2	4	4 per cent
Mixed	0	18	18	18 per cent
Totals	16	84	100	100 per cent

In the large number of inebriety cases (431) that this hospital has so far treated no evidence has occurred to indicate any damaging effect from associating with mental cases. On the contrary, in many instances, it has aroused patients to the realization that continued excessive alcoholic indulgence leads many times to mental disease and hence has been a potent factor in insuring their subsequent temperance.

Religious services.

Sunday services have been maintained the past year with a fair degree of regularity. Owing to sickness of the ministers and unusual weather a few Sundays have passed without religious services. The patients' interest, however, has remained the same.

Occupational and re-educational work.

The same standard has been maintained, but the percentage of employed (40 per cent) should be increased and more occupation for men would seem the best method of approaching this problem. An exhibition in Ukiah of the needlework department last fall attracted a great deal of favorable attention and the demand for this work has continued large. The balance now in the amusement fund is \$127.76.

Tuberculosis.

Since the insane tubercular patients rarely complain and cough so little that in that way they do not attract attention, we have found it necessary to make a tubercular survey of the wards at intervals. Generally they rapidly improve when placed on the special tubercular wards. Some of them with positive skin reactions (mentioned in last year's report) and with no active physical signs have since died and shown healed tubercular lesions. Hence the test seems to be of little value as to determining the stage of the tubercular process.

Clinics and records.

These have been maintained at the same degree of efficiency and made possible the segregation and study of the cases given in the following tables as well as enabled us to more intelligently treat and dispose of the individual case.

Selected cases for the biennial period 1912-1914 that had no record of previous mental attacks and gave prospect of recovering in a reasonable time after admission (157 cases):

	Recovered	Improved	Unim- proved	Died	Totals
Outbreaks in abnormal make up.....	17	2	0	0	19

Unimproved -----	0		1 (Korsakow)	2.5 per cent
Died -----	0		1 (Brights)	2.5 per cent
	12 cases	100 per cent	40 cases	100 per cent

These are such cases as would probably go to a hospital for acute mental diseases or a sanatorium. In addition they include some cases so disturbed that they would on that account, if not for financial reasons, have been sent to a state hospital. The general percentage of recoveries is surprisingly high as compared with our general average of percentage of recoveries to admissions (32.52%). Also a study of the different classes mentioned shows a range in recovery percentages from 31 per cent to 100 per cent.

This illustrates forcibly that we must learn to speak of mental diseases and not insanity as a whole. It would be just as sensible to speak of stomach disease and of lung disease as when speaking of mental disease to speak of insanity as one form of affliction. This mistake is one of the causes for the fact that mental diseases are not treated early enough and are usually placed in the hands of psychiatrists only when they are chronic asocial and less hopeful.

With a few exceptions there has been an admirable spirit of cooperation among the hospital employees and attendants and the therapeutic as opposed to the purely custodial care of patients has infused a new spirit into the work. Almost all realize that it is a special work requiring special skill and training and bringing its own important and special rewards.

Buildings.

The farm cottage is completed and nearly ready for occupancy. A new female tuberculosis cottage, with a capacity of thirty patients, is being erected. With its cottages and out of door life, which have proven so successful in handling debilitated and senile, as well as tubercular cases, Ward 7 outgrew its original purpose and a portion of these grounds has been completely separated and is used for tubercular patients only. Thus we are now fully equipped for the proper care of both male and female tubercular cases. The "mission corridor" in the men's rear parole grounds is practically completed and has exceeded in beauty and practicability even our anticipation.

The dam for the storage reservoir is nearing completion and the gas plant will be completed in a few months.

Our measures to prevent flies as noted in last year's report, have been carried forward even more successfully this year.

The usual repair work of various sorts has been carefully attended to and Wards 5 and 6 have been entirely repainted and renovated.

Special appropriations recommended.

(1) Our present large wards of 75 to 115 patients make it impossible to segregate patients satisfactorily. It seems impossible to, in any way, divide any of the present wards. This is especially necessary

with the acute recoverable and disturbed cases. Hence, for this reason and the benefits of early special treatment, we again recommend a new receiving building and equipment.

(2) Our food elevators are old, out of date and liable to break at any time. We should have three new electric elevators.

(3) The main pipe line has repeatedly broken the past year and wasted water we could ill afford to spare as well as damaged property. It is a thin steel pipe line and should be heavy cast iron if greater durability is desired.

(4) Our attendants work long hours (twelve hours or more) and should have some chance to get away from their surroundings. Besides we have not rooms enough on the wards to accommodate all the attendants and what rooms we have should be used as single rooms for patients. This change is especially necessary for the night watch force who must sleep in the daytime, hence a new nurses' home and a new night watch home are recommended.

These are the most important necessities recommended for your consideration. Below is statement of special appropriation desired and their estimated amounts.

New receiving building and equipment-----	\$100,000 00
Three electric elevators-----	7,500 00
New main pipe line-----	25,000 00
Nurses' home -----	20,000 00
Night watches' home-----	5,000 00
Necessary plumbing repairs-----	5,000 00
	<hr/>
	\$162,500 00
Estimate for salaries-----	207,893 00
Estimate for support-----	273,907 00

In conclusion, I beg to express my appreciation of the devotion to this hospital of the Board of Managers, who have for many years given generously time and thought from their own large and varied interests.

Respectfully submitted.

ROBERT LEWIS RICHARDS,
Medical Superintendent.

MENDOCINO STATE HOSPITAL. WASSERMAN TESTS.

From April 1, 1913, to July 1, 1913. (Last quarter of the sixty-fourth fiscal year.)

REPORT OF BOARD OF MANAGERS, SOUTHERN CALIFORNIA STATE HOSPITAL.

To the State Commission in Lunacy, Sacramento, California.

GENTLEMEN: The Board of Managers of the Southern California State Hospital would respectfully report for the biennial period ending June 30, 1914, that regular monthly meetings of the Board of Managers have been held, together with such special meetings of the Board and of its committees as has been deemed necessary for the efficient carrying on of the work of this hospital. The interest taken in the management of the hospital is but shown by the fact that no member of the Board has been absent from any meeting unless such absence was caused by illness or through inability to attend because of being away from this section of the state.

We are pleased to report the physical condition of the state property under our charge as good. The buildings are in good repair, some considerable work of this character having been undertaken and concluded during the biennial period. Our orange grove suffered severely during the cold weather of January, 1913, and is just now again rounding into good shape. Considerable expense in the way of pruning and fertilizing was necessary.

Under the present management the policy has been adopted of using more of this fruit in the hospital than was the custom in times past. The result has been excellent in the added contentment and health of the patients. The hospital vegetable and general fruit gardens have also been enlarged and have added greatly to the variety of the daily menus, also with marked benefit to the general health of patients and employees, and enabling this hospital to so considerably lower its support cost, that the Southern California State Hospital now has the lowest per capita expense of any hospital in the state.

The past two years have seen the addition of four cottages to the buildings on the hospital grounds, with a total added capacity of 340 patients. A new power plant has been erected and the institution is better heated than ever before in its history. A new laundry which was sadly needed is now in course of erection. A new concrete reservoir for the storage of water, a spur track and concrete oil tank are other improvements accomplished.

This hospital is looking forward to the building of a second hospital in this end of the state, on the site acquired at Norwalk, California. Our needs for the future will depend largely upon the progress made at that institution, and are therefore not taken up at length in this report.

We desire to commend the efficiency of our superintendent and his staff of officers, and employees. We believe that they realize the responsibilities placed upon them, and that they perform their work earnestly and well. We would especially commend the results obtained by the medical superintendent in placing a ward of the older male patients under the care of female nurses exclusively. The experiment has been entirely successful and will undoubtedly lead to an extension of this policy.

Twenty-five acres have been added to the planted area of the hospital farm. This was put into alfalfa. The land thus used had lain practically idle for many years. It was made available for agricultural purposes through the purchase of additional water under an appropriation of the last legislature.

There have been no changes in the medical staff in this last biennial period. There has been the addition of a resident dentist who finds an ample field for his labors.

We believe that the wards of the state of the Southern California State Hospital are well cared for, are maintained in comfort and have the benefit of the best curative methods known to this department of medicine.

Respectfully submitted.

H. MCPHEE,
AUSTIN T. PARK,
E. W. BURKE,
W. A. AVEY,
E. C. MERRYFIELD,
Board of Managers.

REPORT OF MEDICAL SUPERINTENDENT, SOUTHERN CALIFORNIA STATE HOSPITAL.

November 24, 1914.

*To the honorable Board of Managers,
Southern California State Hospital for Insane.*

GENTLEMEN: I have the honor to present herewith our biennial report of the work of this hospital, for the period ending June 30, 1914, showing movement of patients, receipts, and expenditures of money, improvements made during this period, together with a summary of improvements necessary for the next biennial period.

The past biennium has been a very important one in the affairs of this hospital. Four (4) modern patients' cottages have been completed and occupied, each nicely furnished and equipped in such a manner as to afford for the patients many of the comforts of home. These cottages are constructed of metal lath and plaster, at a cost of something less than \$20,000 each, and have a capacity of eighty-five (85) patients each.

One of these cottages is occupied by male, senile cases, who are cared for exclusively by female nurses. These nurses shave, bathe, feed, bed, and nurse these old men in a manner superior to the service rendered by male nurses, and provide the most cheerful and homelike surroundings to be found in the hospital.

These cottages are all equipped with player pianos and are surrounded by beautiful lawns, and flower gardens, croquet and tennis courts, all to the delight and pleasure of the patients.

We have constructed a reservoir with a capacity of 433,485 gallons which is situated just below the old reservoir and will suffice to meet our needs for many years to come.

A new laundry building has been begun near the new power plant and will be completed in the early part of 1915. This much needed improvement will materially relieve our present congested condition in our laundry service.

The new power plant having been completed, we have installed a new 250 horsepower boiler and moved our old boilers from the old boiler house to the new.

The steam mains from the new power plant to the various departments of the hospital have been installed and the conduits covered.

The work of making certain changes in the internal heat distribution lines and making connection with the new steam mains is well under way and bids fair to be completed by winter time. When this work is all completed we hope to have the best heat, steam, and hot water distribution that has ever obtained at this hospital.

With the changing of the power plant it has been necessary to build a new spur track and a concrete oil tank.

Our farming and gardening operations have been upon a very large scale. We have produced fresh vegetables and fruits in such abundance that every day the patients have enjoyed the fresh foodstuffs from the fields and gardens and has enabled us to operate at a lower per capita cost than any other hospital in California.

We have tried with success the production of tobacco for our patients' use and sorghum for the table.

The scientific work in the care and treatment of our patients has moved on a pace with the modern methods employed in hospitals of this character. Our pathological laboratory has been ably conducted.

We have installed a resident dentist on our staff, who is devoting all of his time to the care and treatment of the patients' teeth. Already we think we can see an improvement in the general health and condition of the patients, as a result of the good work being done in this department.

Our requirements for the next biennial period will depend very largely upon the development of the new hospital at Norwalk.

Being assured that Norwalk will be sufficiently advanced to care for one hundred and fifty (150) or more patients before the end of the first fiscal year, of the next biennial period, we have limited our requirements to the following:

Two (2) patients' cottages and furnishings, \$50,000. Each cottage to provide for about seventy-five (75) patients, and constructed upon a similar plan to the one built during the present biennial.

Nurses' home, \$30,000. Many of our nurses are now quartered in the basement and attic, and such places as are not suited for human habitation.

In consideration of the excellent work being had from this branch of the service we should at least provide wholesome surroundings for our nurses, while their weary minds and bodies are seeking rest and recreation from their day's hard task.

New deep well, pumping station, and water mains, \$8,500. To provide additional water for our extensive landscape gardening and farming operations.

Industrial building, \$25,000. In which to provide cheerful, well ventilated quarters for our sewing room, shoe factory, mattress factory,

and tailor shop, where over one hundred (100) of our patients work nearly every day. These shops are now in the basement where it is difficult to secure proper comfort or ventilation.

New electric wiring grounds and buildings, \$8,000. To install an underground electric supply with ornamental lamp posts, etc.

Besides the aforementioned improvements we will require for the next biennial period, for support, \$533,355.

For salary, \$285,000.

It has been our good fortune to have with us the same loyal and efficient medical staff throughout the biennial period. To them we feel a deep sense of gratitude for their untiring efforts in behalf of the service and bespeak for them a full measure of your confidence.

I appreciate fully the splendid work being done by our nurses and attendants. They have uniformly been kind to the patients and considerate of their welfare, and have exercised due courtesy toward the visiting public.

We desire to acknowledge our appreciation of the encouragement and assistance given us by your honorable Board in the performance of the many important and trying duties imposed. For your aid and counsel we tender our sincerest thanks and gratitude.

Respectfully submitted.

JNO. A. REILLY,
Medical Superintendent.

REPORT OF BOARD OF MANAGERS OF SONOMA STATE HOME.

ELDRIDGE, CALIFORNIA, July 15, 1914.

*To his Excellency, HIRAM W. JOHNSON,
Governor of the State of California.*

SIR: We have the honor to submit our biennial report, covering the sixty-fourth and sixty-fifth fiscal years. We have adopted as our report that of the medical superintendent of this institution, as his report thoroughly and explicitly embodies all that need be said concerning the Sonoma State Home.

We gratefully acknowledge the furnishing of the information and data contained in the report of our worthy, faithful and efficient medical superintendent, Dr. William J. G. Dawson. We acknowledge that to him, more than to any other agency, belongs the credit for the efficient work and consistent progress which has been accomplished, and is now being wrought in this institution.

We desire to thank Dr. F. W. Hatch, General Superintendent of State Hospitals, for his able assistance and wise counsel, so readily given to us and to our medical superintendent to aid us in the solution of the many perplexing problems which have confronted us during the last biennial period.

To the Engineering Department and its staff of faithful officers, we acknowledge our obligation for their timely aid on many occasions.

Respectfully,
ROBERT A. POPPE, President,
PERCY S. KING,
C. E. HAVEN,
E. M. NORTON,

Board of Managers of Sonoma State Home.

F. A. CROMWELL,
Secretary, Board of Managers.

REPORT OF THE MEDICAL SUPERINTENDENTS.

Two fiscal years ending June 30, 1914.

To the honorable Board of Managers of the Sonoma State Home.

GENTLEMEN: I hereby present my biennial report covering the two fiscal years ending June 30, 1914.

As it will be twelve years next October since I assumed the duties of superintendent of this Home, I thought it would be of interest to take a retrospective view and note the improvements that have taken place during this period.

The buildings in 1902 consisted of the unfinished main building, the manse for epileptics and cripples. Madrona Hall for industrial purposes and sleeping quarters for employees, a small power house, superintendent's cottage, old Manor House, dairyman's cottage and two barns. Nine in all. Since that time the following buildings have been added:

- Administration Building.
- Oak Lodge.
- Laurel Cottage, for female epileptics.
- Maple Cottage.
- Lux Cottage.
- Cohen Cottage.
- Manzanita Hall, for male epileptics.
- New power house.
- Manse barracks.
- Boys' nursery.
- Nursery barracks.
- Three hospital buildings.
- Gymnasium.
- Ice plant.
- Carpenter and paint shop.
- New dairy barn.
- Farm cottage.
- Coachman's cottage.
- Vegetable gardener's cottage.
- Chicken ranch cottage.
- New dining-room.
- Oil pumping station.
- Graham cottage.
- Boys' new nursery.
- Ice cream and candy store.

Twenty-eight in all, making a total of thirty-seven buildings on the premises.

Besides the above mentioned buildings many improvements have been made during the past twelve years including septic tank and sewer system, fire escapes, fire protection system, two domestic reservoirs, Fern Lake, Garden Reservoir, landscape garden nursery, new telephone system, new fencing, new orchards (50 acres), hog parlor, chicken plant, garbage incinerator, new boilers, blacksmith shop, new school facilities and new playgrounds. Total, 18.

From the several appropriations granted us by the last legislature we have erected one cottage (now nearing completion) for a nursery for males. The appropriation for the construction and furnishing of this building amounted to \$19,000.

We have also completed a cottage for farm hands, the appropriation for which amounted to \$2,000.

The appropriation of \$5,000 for a dormitory for female employees was found to be inadequate for constructing and furnishing same, therefore the building was not erected, awaiting an additional appropriation from the next legislature.

The cottage for female epileptics, for which we received an appropriation of \$19,000 for building, equipping, and furnishing same, has not yet been started, but we hope to have it well under way before the rains set in.

An appropriation, amounting to \$10,000 to further develop and increase our water supply, is being partly utilized by the sinking of a well near Sonoma Creek; nothing definite has yet been obtained.

The appropriation of \$5,500, granted us for the construction of septic tanks and making such repairs, alterations and additions to our present sewer system, has not yet been utilized. We expect the work to be started in the near future.

We also constructed a neat cottage for our vegetable gardener at an expense of \$703, paying for same out of our contingent fund.

During the spring of 1913 we constructed a modern up-to-date tubercular hospital with screened-in wide porches on three sides, at an expense of \$2,510.53, paying for same out of our contingent fund. This addition to our hospital buildings enables us to segregate our active cases of tuberculosis from the inmates housed in the general wards of the institution.

The value of real estate, December 31, 1913, was estimated at \$53,978.60; value of improvements, \$664,718.00. Total, \$718,696.60.

Population.

Our institution has grown rapidly. The number of inmates remaining June 30, 1902, was 573. Our present population, June 30, 1914, numbers 1,067. If none had died or been discharged during the twelve years the population would be 2,277.

We admitted 265 during the past two years, and expect to admit about 230 in the next biennial period. Included in our total number of inmates there are 286 epileptics who average 2,200 spasms each month.

Our pay roll for salaries in 1902 amounted to \$3,300 per month. It now amounts to \$8,264.33. The amount allowed for support in 1902 was \$4,200 per month. It now amounts to \$9,904.58. There are now 165 employees. Of this number 77 are attendants, including six nurses in hospital. The average number of inmates to each attendant is 15.17. Our contingent collections average about \$1,200 each month. One half of this amount helps to pay salaries. We have on our wait-

ing list, June 30, 1914, about 132 applicants. According to an estimate, based upon the census of 1910, the Training School at Vineland, New Jersey, reported nearly 8,000 feeble-minded in California.

Causes.

It is generally conceded that heredity and alcohol are responsible for a large proportion of the cases of feeble-mindedness; also as factors in the cases of epilepsy. In our efforts to determine how far syphilis is a factor, our expert, Dr. Grace L. Boalt, has tested 1,253 inmates by the Wasserman test. Fifty-nine only gave positive reaction, equal to 4.7 per cent. Fifty of these cases have been treated with Salvarsan and Neo Salvarsan with the result that only five cases now remain positive.

In my opinion there are only three ways of solving the problem of how to prevent the increase of feeble-mindedness and kindred diseases: *first*, by making the parents or friends, where they have such, take care of their children up to the age of puberty, then have them committed to institutions (set apart for the purpose) where they remain during the child-bearing period; *second*, by a regular system of sterilization; and *third*, by the compulsory commitment by courts of the whole number known to exist. In my opinion the first is the most practical; the second, sterilization, it is true will prevent procreation, but will rather have a tendency to increase prostitution. Again, the inmates of an institution do not require to be sterilized, as they are protected, but rather those who are out in the world, and this would be a difficult proposition to carry out successfully. The third way is impracticable as the expense would be too great and no state has yet provided sufficient buildings to house more than a small per cent of the number of cases known to exist.

We are endeavoring to conduct the Home on the principles of love, harmony, and happiness. In caring for the feeble-minded there is no class of individuals that requires more of a missionary spirit on the part of the officers and attendants.

During the past two years we sent a large number of our boys and girls to Petaluma to the circus, engaging special trains for the occasion. The expense of these trips is met by our Christmas fund. We also give moving picture entertainments which are looked forward to and much enjoyed. Our great day of pleasure, however, is the Fourth of July. We begin at 9 a. m. and end at 9 p. m. The forenoon is devoted to races of all kinds (the band playing at intervals) ending with a tug-of-war. In the afternoon the boys play a game of baseball and the girls are given a party in the Assembly Hall. In the evening, commencing at 7 o'clock the exercises, which are held out of doors, consist of music by the band, patriotic songs by the boys and girls, drills by

the boys and girls on the front lawn—ending the day's festivities with fireworks.

The subscriptions towards our Christmas fund last year amounted to \$1,088.85.

We are encouraging our inmates to make gardens, and the grounds around several of the cottages are showing greatly improved conditions as a result.

Research work.

Besides the Wasserman tests already referred to we are using tuberculin tests in suspected cases of tuberculosis. We also began the Binet tests in October, 1913, and are now continuing these tests by experts, representing the universities of California and Stanford.

School work.

Our teachers have increased from two to five in the last few years, but we should have more teachers and greater school facilities—especially of an industrial character. Very creditable work, however, has been done in the five school departments, including grade, kindergarten, physical culture and fancywork, music and sloyd.

We have recently appointed one of our carpenters to take charge of a squad of boys and teach them to do repair and constructive work where required around the premises.

We have also instituted out-of-door playgrounds and intend to increase the necessary apparatus as occasion may require.

We have quite a large number of insane in our institution which should be removed, as we have not the facilities for properly caring for them and as long as they remain here they are a menace to the feeble-minded. The epileptics also should be colonized and not allowed to mix indiscriminately with the feeble-minded.

There should be more appropriations for buildings to house the feeble-minded so that the different grades could be better segregated, and the large number of applicants admitted.

Farm.

Our farm consists of nearly 1,700 acres of land, of which there are 180 acres in fruit; 140 acres in hay; 18½ acres in vineyard; the remainder is principally grazing land.

We are milking 71 cows which, during the month of May, yielded 7,502 gallons of milk, while in June the supply was reduced to 5,560 gallons, owing principally to the decrease in green feed. A tuberculin test on our cattle, made in September, 1913, showed the herd to be free from tuberculosis, proving that tuberculosis which had previously existed in our milking herd was entirely under control.

Legislative wants.

We expect to ask the next legislature for the following:

For support for the sixty-seventh and sixty-eighth fiscal years, \$280,000.

For salaries for the sixty-seventh and sixty-eighth fiscal years, \$230,000.

One cottage for epileptic males (90 inmates). Furnishing for same.

One infirmary building for low grade girls (90 inmates). Furnishing for same.

One cottage for females of marriageable age (90 inmates). Furnishing for same.

Building for bakery, including new ovens, and laundry.

Schoolrooms and assembly hall. Furnishing for same.

Industrial school building.

Dormitory for male employees. Furnishing for same.

Additions to electric power plant.

For water and steam piping and plumbing, replacement, and repairs.

Improvement of grounds and roads.

Apartment house for married employees.

Cottage for first assistant physician. Furnishing for same.

Girls' nursery building. Furnishing for same.

Medical staff.

On August 3, 1912, Dr. Anna G. McBean, second assistant physician, resigned. On December 6, 1912, Dr. Mabel A. Genung was appointed to fill the vacancy. On November 19, 1913, Dr. F. O. Butler was appointed interne. On April 30, 1914, Dr. Mabel A. Genung left the employ of the institution.

Acknowledgments.

I gratefully acknowledge donations by the friends of the Home, of money, etc., at Christmas times; also the loan of films for our moving picture entertainments from Miles Bros., Inc., of San Francisco, free of charge; also receipt of the "Santa Rosa Press Democrat."

I especially desire to acknowledge the gratuitous services of Dr. B. F. Alden of San Francisco, who has repeatedly performed important operations for us, in our hospital, during the past year.

To general superintendent, Dr. F. W. Hatch, I am indebted for visits and advice.

To the officers and employees of the Home I tender my sincere thanks for their valuable assistance in carrying on the work so successfully.

To you, gentlemen, comprising the honorable Board of Managers, I desire to express my thanks for your unanimous support and cooperation in everything that tends toward the welfare of the institution.

Respectfully submitted.

WM. J. G. DAWSON,
Medical Superintendent.

TABLE No. 5.

Showing age at time of admission of patients for the biennial period ending
June 30, 1914.

Age	June 30, 1913	June 30, 1914
Between 1 and 10 years.....	33	17
Between 10 and 20 years.....	89	50
Between 20 and 30 years.....	24	15
Between 30 and 40 years.....	16	8
Between 40 and 50 years.....	4	5
Between 50 and 60 years.....	2	-----
Between 60 and 70 years.....	2	-----
Totals	170	95

TABLE No. 6.

Showing the civil condition of patients admitted during the biennial period ending
June 30, 1914.

Civil condition	June 30, 1913	June 30, 1914
Married	4	2
Divorced	-----	-----
Single	166	93
Widowed	-----	-----
Totals	170	95

TABLE No. 7.

Assigned causes of mental defect in the patients admitted during the biennial period
ending June 30, 1914.

Cause	1912-1913		1913-1914	
	Male	Female	Male	Female
Congenital (hereditary)	49	44	32	28
Consanguinity of parents.....	2	-----	-----	-----
Fall; blow on head or spine; accident; burn.....	9	8	3	7
Alcoholism (parents or grandparents).....	9	3	-----	-----
Cerebrospinal meningitis or brain fever.....	7	10	6	6
Shock or injury to mother before birth of child.....	1	1	-----	3
No cause assigned.....	4	2	1	-----
Epilepsy	5	7	8	8
Infantile convulsions	6	7	-----	1
Infantile paralysis	2	2	-----	1
Typhoid fever	-----	-----	1	-----
Insanity (in parents, grandparents or near relatives).....	3	4	-----	-----
Scarlet fever	-----	3	-----	-----
Infantile rheumatism	1	-----	-----	-----
Pneumonia	1	-----	1	-----
Syphilis (hereditary)	1	-----	-----	2
Diphtheria	1	-----	-----	1
Ptomaine poisoning	-----	1	-----	-----
Whooping-cough	4	-----	1	-----
Parturition	-----	2	-----	-----
Tropical fever	-----	-----	1	-----
Attempted abortion	-----	-----	-----	1
Cebro-cerebellar defect	-----	-----	-----	1
Deduct (for contributory or indirect causes).....	105	94	54	59

Lobar pneumonia	11	4	-----	2
Pleuro-pneumonia	-----	-----	1	-----
Laryngitis	-----	1	-----	-----
Gastritis	-----	-----	-----	1
Gastroenteritis	-----	1	-----	-----
Gastritis and enteritis	-----	-----	1	-----
Diarrhœa	1	-----	-----	-----
Cholecystitis	1	-----	-----	-----
Cholangitis	1	-----	-----	-----
Enterocolitis	1	-----	-----	-----
Perforation ascending colon	-----	1	-----	-----
Nephritis	-----	1	2	2
Accidents	1	-----	-----	-----
Totals	37	28	34	17

TABLE No. 10.

Showing autopsies from July 1, 1912, to June 30, 1914.

73	Sept. 10, 1912	H. D., m.-----	Endocarditis. Cause of death: myocarditis, with endocarditis and commencing pleurisy.
74	Nov. 23, 1912	A. C., f.-----	Bright's disease. Cause of death: chronic parenchymatous nephritis.
75	Dec. 7, 1912	U. A., m.-----	Pneumonia. Cause of death: acute cholecystitis; and lobar pneumonia, with heart clot.
76	Dec. 13, 1912	W. J. B., m.---	Cause of death: infective cholangitis, with gall stones.
77	Dec. 14, 1912	I. H., m.-----	Cause of death: lobar pneumonia, with acute pericarditis.
78	Feb. 3, 1913	C. B. M., f.---	Meningitis. Cause of death: cerebrospinal meningitis.
79	May 6, 1913	O. S. P., m.---	Acute bronchitis. Cause of death: capillary bronchitis and endocarditis.
80	June 1, 1913	E. J., f.-----	Pleurisy. Cause of death: chronic valvular heart disease, with pericarditis and bilateral pleuritis effusion.
81	June 1, 1913	E. H., f.-----	Broncho-pneumonia. Cause of death: broncho-pneumonia.
82	June 12, 1913	H. W., f.-----	Anæmia. Cause of death: persistent anæmia.
83	July 6, 1913	R. E. B., f.---	Pericarditis. Cause of death: pericarditis, with effusion.
84	Aug. 20, 1913	M. S., f.-----	Lobar pneumonia. Cause of death: lobar pneumonia, with leptomeningitis.
85	Dec. 22, 1913	C. S., m.-----	Multiple sclerosis. Cause of death: multiple sclerosis, with terminal leptomeningitis.
86	Dec. 30, 1913	R. D., m.-----	Intestinal tuberculosis. Cause of death: intestinal tuberculosis.
87	Jan. 4, 1914	R. H., m.-----	Tuberculosis of lungs and intestines, with abscess of lungs. Cause of death: as written.
88	Jan. 5, 1914	G. M., f.-----	Paraplegia with leptomeningitis. Cause: leptomeningitis.
89	Jan. 21, 1914	P. E. C., m.---	Intestinal toxæmia. Cause of death: toxæmia from rags, etc., swallowed and acute pleurisy.
90	Feb. 5, 1914	D. P., f.-----	Status epilepticus. Cause of death: same.
91	Feb. 8, 1914	M. M., f.-----	Leptomeningitis and ileo-colitis. Cause of death: same.
92	Feb. 19, 1914	S. C., m.-----	Acute myocarditis. Cause: acute myocarditis, with beginning pleurisy.
93	Mar. 3, 1914	P. K., m.-----	Broncho-pneumonia and abscess. Cause of death: broncho-pneumonia, with multiple abscesses and empyema.
94	Mar. 5, 1914	T. B., m.-----	Status epilepticus. Cause of death: status epilepticus ending in broncho-pneumonia.
95	Mar. 21, 1914	D. K., m.-----	Pericarditis. Cause of death: pericarditis, with acute endocarditis; also old Pott's disease.
96	Mar. 21, 1914	W. W., m.-----	Acute leptomeningitis. Cause of death: acute leptomeningitis, with chronic pachymeningitis and softening of the brain.
97	Mar. 23, 1914	C. W. G., m.---	Leptomeningitis and hereditary chorea. Cause of death: foregoing with broncho-pneumonia.
98	Apr. 1, 1914	E. H. C., m.---	Broncho-pneumonia. Cause of death: same.
99	Apr. 4, 1914	T. L. T., m.---	Acute endocarditis, lobar pneumonia and enterocolitis. Cause of death: foregoing and myocarditis.
100	Apr. 10, 1914	J. J. C., m.---	Chronic gastritis and enteritis. Cause of death: foregoing with leptomeningitis.
101	Apr. 18, 1914	S. L., f.-----	Abscess of lung. Cause of death: abscess of lung, with general tuberculosis and myocarditis.
102	May 8, 1914	D. R., f.-----	Chronic gastritis and inanition.
103	May 31, 1914	J. R., m.-----	Tuberculosis of cervical glands. Cause of death: pyelitis, with general glandular tuberculosis.
104	June 26, 1914	J. A. W., m.---	Pulmonary tuberculosis. Cause of death: pulmonary tuberculosis, with gastro-enterocolitis.
105	June 26, 1914	M. B. Z., f.----	Leptomeningitis, due to syphilis. Cause of death: leptomeningitis, due to syphilis.

BIENNIAL REPORT
OF THE
Board of State Harbor Commissioners.

SAN FRANCISCO, CALIFORNIA,

November 1, 1914.

*To his Excellency, Hon. HIRAM W. JOHNSON,
Governor of the State of California.*

SIR: As required by law, the Board of State Harbor Commissioners for the harbor of San Francisco herewith respectfully submits its biennial report for the fiscal years commencing July 1, 1912, and ending June 30, 1914, embracing a full report of all moneys by them received and disbursed, describing the improvements made or under way, and the general condition of the harbor property.

We have the honor to be,

Yours very respectfully,

J. J. DWYER, President,

T. S. WILLIAMS,

JOHN H. MCCALLUM,

Board of State Harbor Commissioners.

Interior of Pier 26.

Interior of Pier 28.

INTRODUCTION.

Personnel.

The present Board of State Harbor Commissioners consists of the following commissioners:

John Joseph Dwyer, President; Thomas S. Williams and John H. McCallum, all residents of San Francisco.

Jurisdiction.

The only harbor under the jurisdiction of the Board of State Harbor Commissioners is that portion of the water front on the bay of San Francisco around the city and county of San Francisco, from the Presidio, the United States military reservation, on the north, thence around the bay front to the boundary line between San Francisco and the county of San Mateo. This report deals only with the commerce, construction, maintenance and operation of this water front. On the other side of the bay, at Oakland, Richmond and elsewhere, local bodies administer their respective harbor facilities.

The statistics and other data refer alone to the state property along the San Francisco water front, consisting of the seawall, the seawall lots behind the same, created by the reclamation of tide lands, The Embarcadero, formerly called East Street, and other water front streets, the belt railroad, tugs and dredgers, and all the piers and wharves in the city and county of San Francisco, except those belonging to the Federal Government at the Presidio and Fort Mason, and some other few on private property.

Towage and Pilotage.

The charges for towage and pilotage from the Pacific Ocean into San Francisco Bay are in no degree under the jurisdiction of the Harbor Board, but are governed by other bodies.

Public Ownership and Operation.

Unlike most of the leading seaports of the United States, San Francisco enjoys the advantage of a harbor front that is owned and operated by the public. The title of the property is in the State of California, and harbor affairs are administered by a board of three harbor commissioners, appointed by the Governor of the state and holding office during his pleasure.

The Harbor Self-Supporting.

Under the law, the harbor has been self-supporting since its inception. All the cost of construction and maintenance of seawalls, buildings, wharves, etc., as well as all the operating expenses, are paid out of harbor receipts. These are derived from charges imposed upon shipping

and cargoes, in the form of rents, tolls, dockage and wharfage for the use of the wharves; switching charges on the belt railroad; from the rental privileges of the seawall lots and of the ferry and other buildings and for the use of the ferry slips, and other lesser sources. The principal and interest of all bond issues must also be paid out of the same revenues. San Francisco harbor thus pays its own way, not a dollar coming out of the public treasury or taxes.

The advantage of public ownership to the shipping interests is shown by the provision of the law that harbor charges must not exceed the amount necessary to meet operating, repair and construction expenses and redeem bond issues. Aliens and citizens are treated on equal terms. It is estimated that if the present San Francisco harbor front and facilities were owned and operated by private interests, they would be capitalized at least for the sum of \$250,000,000, and handsome returns could easily be made on that figure.

General Characteristics of San Francisco Harbor.

It is universally acknowledged that the harbor of San Francisco is in its natural aspects one of the very finest in the world. In size the bay of San Francisco, with its connecting waterways, is one of the very largest landlocked bodies of water anywhere.

On the San Francisco side, because of the scouring effects of the tide, the water is very deep, ranging from thirty-three feet at the seawall, which is the minimum required to be maintained by law, to from fifty feet to seventy-five feet at the outer ends of the piers.

It is admirably sheltered against severe storms, the annual damage to shipping from this source being but trifling; its extreme tidal range is only about eight feet and the mean less than five feet; it offers excellent anchorage over an immense area in convenient localities, with fine holding ground, and, in a word, it is ideal, as far as natural conditions are concerned.

It is the terminal point of four great transcontinental railroad systems, and has behind it and directly tributary to it the two immense valleys of the Sacramento and San Joaquin rivers, which drain much more than half the productive area of the extensive State of California. Likewise, the coast lines north and south of San Francisco are intimately connected with the harbor by important transportation systems, steadily ramifying into much new territory.

Extent of Seawall and Docks.

The present water front line of San Francisco in active use is approximately four miles in length. On June 30, 1914, there were in existence along this line 14,210 feet of completed seawall, twenty-six piers and twenty-seven seawall lots of land, having a total area of approximately

941,786 square feet, together with the tract of about twenty-five acres, leased for fifty years in the year 1900 to The Atchison, Topeka and Santa Fe Railway Company.

The piers and bulkhead wharves offer about nine miles of berthing space at the present time, and the system can be expanded, as the population and commerce demand, until it will cover quite fifty miles.

State Lands Adjoining.

By the progressive construction of a permanent seawall around the water front on the line fixed by law, important land areas between it and the previously existing city front have been reclaimed and become the property of the state and have been devoted to harbor uses.

Many of these have been rented and leased to railroads and warehouses, etc., at remunerative figures, and some have been reserved for the use of the state belt railroad in its switching operations.

In addition to the reports of the Board, there are submitted herewith the following departmental reports:

The reports of the chief engineer, of the attorney, of the superintendent of the belt railroad, and of the secretary.

The report of the secretary contains tables giving the receipts and disbursements of the Board for the biennial period, and also from the year 1863 (in which the Board was created) to June 30, 1914; the status of the San Francisco harbor improvement, San Francisco seawall, second San Francisco seawall funds, with payments made to and from them; the operation of the belt railroad; the extent and cost of completed seawall; the contract work completed since June 30, 1912, and that under way June 30, 1914; the revenues and rentals from seawall lots and other state property; the amount of freight handled over the state wharves.

In the shipping statistics, vessels are credited with net tonnage throughout, not with gross tonnage, as in some statistical shipping reports.

Piers 26, 28, 30, 32.

GENERAL CONDITION OF THE STATE WATER FRONT PROPERTY OF SAN FRANCISCO AND ITS ADMINISTRATION.

Development of Docking and Transporting Facilities.

During the past two years the work of developing and improving docking facilities and the belt railroad along the water front of San Francisco, and otherwise improving the harbor, has been pushed with all the energy at command, under the stimulus, not only of the normal increase in the business of the port, but, especially, in the endeavor to prepare for the great increase of trade that will certainly follow the completion of the Panama Canal.

Means for such new and additional work have been furnished by a state bond issue of nine million dollars, under the San Francisco Harbor Improvement Act of 1909.

An outline of the work done, or planned, or contemplated, is summarized below, and engineering data will be found in the report of the engineer of the Board.

New Construction.

The most notable feature of the past two years has been the rapid extension and reconstruction of the pier system. Decayed wharves have been demolished and replaced by new ones, and additional new piers have been built in new territory.

Harbor Ready for the Panama Canal Opening.

A special effort was made to have the harbor ready for the opening of the Panama Canal. When the canal was thrown open to ships of a limited draught in July, 1914, we are glad to say that the harbor of San Francisco was fit and ready, with all the companies seeking berth assignments amply provided for.

A New Harbor Front.

The present Board of Harbor Commissioners took office in the spring of 1911. Since that time the existing pier system has been very largely made over and large additions have been constructed.

On January 1, 1911, the following twenty-six piers were in existence, to wit:

North of Market Street.—Piers Nos. 3, 5, 7, 9, 11, 13, 15, 19, 21, 23, 25 and 27.

South of Market Street.—Piers Nos. 4, 6, 8, 10, 12, 14, 16, 34, 36, 38, 40, 42, 44 and 54.

The numbers are not consecutive because of changes in past years.

Of these twenty-six piers, the following fourteen have been continued in use, to wit: Nos. 3, 5, 7, 9, 11, 13, 12, 34, 36, 38, 40, 42, 44 and 54. The following five piers, to wit: Nos. 19, 21, 23, 25 and 27, all with concrete supports, have largely gone to pieces, because of the disintegration of the concrete, and are being successively rebuilt with creosoted wooden piles, because of the impracticability of repairing the concrete; and the following seven piers have been condemned, and have been or are being destroyed because worn out and dilapidated beyond repair, to wit: Nos. 4, 6, 8, 10, 14, 16 and 15. All of these latter except No. 10 were old wooden wharves, with wooden pile supports, some of which were treated with different kinds of preservatives against the depredations of the teredo. Pier No. 10 had concrete supports, which had disintegrated beyond repair.

Of the fourteen piers above mentioned as being continued in use, three have wooden supports, old and almost used up, and will have to be pulled out within the next year or two, to wit: Nos. 3, 5 and 11; and a number of the others show such signs of deterioration that they, too, will have to be practically rebuilt.

Nine Million Dollar Bond Issue.

The foregoing summary of the condition of the pier system shows that even without the necessity of additional construction, forced upon the harbor by the building of the Panama Canal, the dilapidation of the existing pier system was so very general that the bond issue was imperatively needed to replace many tottering structures. The ordinary revenues would not have sufficed by a very wide margin to make the necessary renovations.

New and Additional Piers.

The six new piers and bulkhead wharves, adjacent or between them, referred to in our last biennial report as having been planned and contracted for by this Board, have been completed and put in commission, as follows:

1. Pier No. 17, at the foot of Union Street, 800 feet long, 126 feet wide.
2. Pier No. 26, near the foot of Steuart Street, 771 feet long, 200 feet wide.
3. Pier No. 28, near the foot of Spear Street, 677 feet long, 150 feet wide.
4. Pier No. 30, near the foot of Spear Street, 720 feet long, 200 feet wide.
5. Pier No. 32, near the foot of Main Street, 807 feet long, 200 feet wide.

6. Bulkhead wharf, 200 feet wide and 222 feet long, connecting piers Nos. 30 and 32, and used with them as one system by one steamship company.

Since our last biennial report the following new and additional pier has been undertaken and completed and put in commission, to wit:

Pier No. 39, at the foot of Grant Avenue, about 900 feet long and 140 feet wide.

The grain sheds, formerly along the bulkhead wharf near this point, have been moved onto this pier, which is now devoted to the uses of the grain trade of the port.

New and Additional Piers Under Contract.

In addition to the foregoing, contracts have been let, and the work is in progress, for the following seven new piers, to wit:

1. Pier No. 15, at the foot of Union Street, 794 feet long and 90 feet wide, designed for coal bunker use.

Will be completed about January 1, 1915.

2. Pier No. 35, at the foot of Montgomery Street, 896 feet long, average, and 200 feet wide.

Will be completed about May 1, 1915.

3. Pier No. 37, at the foot of Kearny Street, 945 feet long, average, and 200 feet wide.

Will be completed about April 1, 1915.

4. Pier No. 41, at the foot of Stockton Street, 981 feet long, average, and 200 feet wide.

Will be completed about December 1, 1914.

5. Pier No. 46, at the foot of Channel Street, 800 feet long and 200 feet wide.

Will be completed about September 15, 1914.

6. Pier No. 16, at the foot of Howard Street, 685 feet long and 140 feet wide.

Will be completed about April 1, 1915.

7. Pier No. 18, between Howard and Folsom Streets, 685 feet long and 140 feet wide.

Will be completed about May 1, 1915.

New Bulkhead Wharves.

Two new bulkhead wharves have been begun and finished this year, to wit:

Fisherman's Wharf, 60 feet wide by 411 feet long.

Jones Street to Leavenworth Street, 60 feet wide by 400 feet long.

Additional Ferry Slips Under Construction.

The passenger traffic across the bay of San Francisco to nearby counties has increased so enormously during the past two years that it has

been found necessary to expand the system of eight ferryboat slips at the foot of Market Street up to a total of twelve slips.

Of the former number, one, No. 7, being out of line and dilapidated, has been destroyed, and slip No. 6 is being rebuilt. Additional slip No. 8 has been finished and work is progressing on additional slips Nos. 7, 9 and 10. These adjoin the old system on the south.

Two additional slips on the north of the existing system have been planned, but can not be undertaken until other constructions are finished.

Additional Car Ferry Slips Under Construction.

Two new car ferry slips, for the freight cars ferried from across the bay of San Francisco, are in process of building at the foot of Powell and Mason streets. When finished, about December 1st next, the existing two car ferry slips near the foot of Lombard Street, being worn out beyond repair, will be destroyed, and will not be rebuilt, as it is designed to occupy their place with a new merchandise pier, to be known as pier No. 29.

New Piers Planned.

This proposed pier No. 29, together with two others, to be known as Nos. 31 and 33, will fill the gap between existing pier No. 27 and pier No. 35, now under contract. Before these are undertaken, however, the Board has planned to build two other new piers south of Market Street, to be known as piers Nos. 22 and 24, between Folsom and Harrison streets, which will take the place of piers Nos. 14 and 16, being demolished this year as stated above.

When pending contracts and these five proposed piers are completed the entire water front will have been all filled up with piers and ferry slips from Taylor Street on the north to Channel Street on the south, a distance of about three miles, with pier No. 54 outlying beyond China Basin.

Increase of Wharf and Pier Area.

The wharf area of the former piers still retained is 1,535,539 square feet, and the wharf area of the new piers built and finished by this Board is 1,190,174 square feet, an increase of 77.5 per cent. When the piers under construction are finished the increase of wharf area over the former extent will have been 1,728,124 square feet, or 112.6 per cent.

The Embarcadero Widened.

The Board has condemned the private property situated along the southerly line of Harrison Street at its junction with The Embarcadero, embracing an area of about 19,657 square feet, in order to widen The Embarcadero at this point to the legal width of 200 feet, and this area has been made a part of The Embarcadero.

The purchase price under the judgment in condemnation proceedings was \$58,597.95, and the same was paid out of the current revenues and not out of the bond money.

This improvement is a great gain in traffic conditions at this point, as the private property in question blocked the extension of Steuart Street south to The Embarcadero, and also narrowed The Embarcadero so as effectually to block team and belt line traffic around the foot of Harrison Street.

New Sections of the Seawall.

The only two remaining sections of the seawall in the district from Market Street to Channel Street have been contracted for and the work is now approaching completion. They are known as sections 9a and 9b, aggregating 1,760 feet in length and 60 feet wide, extending from Mission to Harrison streets.

These sections have been built especially strong, of reinforced concrete piles, driven through a loose rock fill, sunk in a deep trench, and with steel caps and asphalt deck.

Additions to the Union Depot and Ferry Building.

As stated in our last biennial report, two new wings were planned for the Ferry Building, but the necessity of using the available funds for the more pressing needs of pier and other constructions caused the Board to postpone this work till a more favorable time. A one story addition of 140 feet long by 127 feet wide is, however, now being built on the southern end of the building to accommodate a demand for additional baggage room space.

New United States Post Office.

The old wooden building, so long occupied by the United States Government as a ferry post office, and most unfortunately located out in the main thoroughfare, The Embarcadero, at the southern corner of the Ferry Building, will soon cease to be an eyesore and an impediment to traffic.

In its place a new post office, of concrete and brick, will be built by the Board, back of the sidewalk line, near the present location. This work was undertaken at the most urgent request of the United States postal authorities at San Francisco, and the building will become the main distributing post office in the business districts of the city, thus saving hours of time to the merchants, who have complained bitterly of the long delays incident to the present distributing point of the mail, far uptown.

The plans of the new post office are finished. The work will start soon and be finished next summer.

Belt Railroad.

The development and extension of the state belt railroad have been an especial care of the Board.

San Francisco undoubtedly now has the most complete harbor belt line railroad switching system in the country.

The railroad is located on The Embarcadero, a marginal thoroughfare 200 feet wide, located just behind the seawall, and the system is intended and is used to connect up, for the switching of freight cars, the various piers, the yards of other railroads, and private warehouses and industries generally.

The spur track permits for use on city streets fall under the jurisdiction of the municipal authorities, but the construction, maintenance and operation of the belt railroad around the water front are wholly under the jurisdiction of the Board.

Bringing Ship and Rail Together.

As stated in our former report, few harbor improvements are more sought by all ports than the bringing of ship and railroad car close together, side by side, if possible, so as to promote despatch and cheapness in transferring freight. This modern trend finds one of its best illustrations on the San Francisco water front.

Railway Spurs on Piers.

It has been the policy of the Board not only to equip all new piers with spur tracks running the full length of the piers, but also, wherever the water slip spaces beside the old piers were sufficiently wide to permit of it, to widen existing piers and place spur tracks thereon.

Railway Spurs on Old Piers.

In addition to the widening of old piers Nos. 9, 11 and 12, and the running of spur tracks along one side of each throughout its full length, as stated in our former report, this Board has since widened piers Nos. 25 and 27 and built spur tracks on one side of each pier, full length.

Railway Spurs on New Piers.

On the new piers, spur tracks, full length, have been placed on both sides of piers Nos. 26, 28, 30, 32, 39, 41 and 46. On the other piers under contract, tracks on both sides of piers 140 feet wide or over, and on one side of piers under 140 feet in width, will be placed.

Where there are tracks on both sides of the pier, the usual practice is to make one a surface track, and the other is depressed so as to bring the floor of the railroad car on a level with the floor of the pier, thus facilitating trucking of certain classes of freight. Our practice is to accommodate the proposed tenants in this regard according to their preferences.

Center Tracks Not Favored.

It was a practice of former Boards to install railway spur tracks down the center of the pier. This was done on piers Nos. 34, 36, 38 and 40. But experience has demonstrated that the center arrangement is a mistake, because it interferes very seriously with teaming and trucking. The arrangement of the tracks along the sides of the piers and outside the pier sheds is now universally demanded by shippers. This arrangement has been followed in all our constructions.

Belt Railroad Connection Across Market Street.

Our last biennial report referred to the fact that we had begun the construction of the necessary link, extending from Folsom to Washington streets, and crossing in front of the Ferry Building at the foot of Market Street, to connect the northern and southern divisions of the belt railroad.

This important work has been completed and the operation of the new continuous line proceeds with perfect satisfaction and without the slightest interference with the city street car traffic.

South of Market Street the belt line has been extended to Channel Street.

Extension of the Belt Railroad North.

A large extension has been made to the north and west, more than a mile in length, from The Embarcadero, along Jefferson Street through the new tunnel under the United States Fort Mason military reservation to a connection with the railway tracks of the Panama-Pacific International Exposition Company, in Beach Street, between Laguna and Buchanan streets.

Purpose of this Extension.

The main purpose of this extension was to connect up the belt line with the United States Army transport docks, situated at the foot of Laguna Street, in the northwest corner of the Fort Mason reservation, and its completion has directly connected the transport docks by rail with the transcontinental railroad systems.

These docks are the permanent government location for all the transports, which convey men and material to the Philippine Islands and the other insular possessions.

Situated so remotely from the termini of the railroads in San Francisco, the transport docks were subject to a long and expensive haul by truck of all their merchandise and other material, and the army representatives in San Francisco urgently requested the Harbor Board to extend the belt line railroad to the transport docks, both for commercial and military reasons. On account of the grades, this could only be done by the construction of a tunnel under the Fort Mason military reservation.

Fort Mason Tunnel.

Authority to the Harbor Board to construct such a tunnel and extend the belt line was conferred at the last session of the legislature. (Stats. 1913, page 383).

Under this act the tunnel, 1,500 feet in length, 17 feet wide, and 22 feet high, of concrete throughout, with a single track railway, designed for freight service has been built.

It extends from Van Ness Avenue on the east, opposite the end of Jefferson Street, to a point near Beach and Laguna streets on the west, running throughout its length under the Fort Mason military reservation.

Federal authority to cross the reservation with the tunnel was granted by congress to the Panama-Pacific International Exposition Company and its assigns, and the exposition company assigned its rights with the approval of the government to the Board of State Harbor Commissioners.

Other Purposes of this Extension.

Through the tunnel the belt line connects up with the railway switching system within the Panama-Pacific Exposition grounds and an arrangement has been made with the exposition company whereby exhibits on their way to and from the grounds will be carried on the belt line.

Of course, other industries, along the line of this Jefferson Street extension, will also be served, and by this means a large new water front area of desirable flat land has been made much more available for factory and other commercial uses.

After the exposition closes, it is planned to extend the belt line further west to the United States military reservation, known as the Presidio.

Fort Mason Tunnel and Belt Extension Finished.

The tunnel and the belt line extension through the same have been finished and appropriate dedicatory exercises were held on October 31, 1914.

A Continuous Belt Railroad Around Harbor.

By these constructions and extensions, a continuous belt railroad switching system, adequately equipped, is now in full and successful operation around the whole active harbor front of San Francisco, from the United States transport docks on the north and west to Channel Street on the south. It is a tremendous gain to the harbor, and its real advantages only become properly estimated when it is recollected that even such a great seaport as New York has no harbor belt line.

Change in Wharf and Pier Rentals.

When this Board took office, pier rentals of the various companies enjoying definite assignments of wharf and berthing spaces, were based on the running foot and fixed at fifty cents per lineal foot.

This Board, as noted in our last report, reduced this charge ten per cent.

As the rate applied to piers of varying widths, an undue advantage was given by this system of rating to the companies having the wider piers.

Consequently, a change of system has been instituted, basing the rental charge on pier area. This is fairer because it is uniform.

Moreover, as the new piers are much better for berthing ships and handling cargo than the older piers, a keen competition arose among shippers for the superior advantages.

To equalize matters as far as possible, the Board therefore made a distinction between the new piers, that is to say, piers built since March, 1911, on which the rental was fixed at one and two tenths of a cent (\$.012) per square foot per month, and the old piers in existence at that date, on which the rental was fixed at nine tenths of a cent (\$.009) per square foot per month. This change gave universal satisfaction to the shippers.

Pay Roll.

The pay roll of the Board is divided into two parts, one applicable to the force employed on the new work done under the bond issue and the other to the current work and administration of the harbor. The former, consisting principally of the pay of inspectors and draughtsmen, will progressively diminish as the number of new constructions under way become less by completion.

Day Work in Repairs and Improvements.

As stated in our last report the Board substituted the day labor system in place of the contract system in many classes of repair and other work, particularly pile driving. This system has been continued with satisfactory results.

The pay for day work, of course, appears in the pay roll and more work means more pay roll.

Under the previous Board such work was done by contract, and the cost thereof necessarily appeared under the head of contracts and did not figure in their pay roll.

No proper comparison can be made between the pay rolls of successive boards unless the amount and character of the work done and the operations conducted are taken into consideration.

Increase in Number of Locomotives and in Business.

The great enlargement of the belt line system and the consequent increase in business necessitated the purchase of new locomotives since the last report. The Board is now operating seven locomotives, whereas the number in use when we took office in 1911 was three. This, of course, entails the employment of more crews. The road is operated twenty-four hours a day, and, in the crop-moving season, also on Sundays and holidays.

The belt line business, by the building of the connection across Market Street and other extensions, has increased over 100 per cent during the past year.

Other Departments.

We refer to pages 26 to 28 of our last biennial report as to the conditions governing the working and administrative forces and the Board's policy with respect to the same.

Civil Service Law.

The last legislature passed a civil service employment law, which applies throughout the state, including the force under this Board. It took effect in August, 1913.

In our last report we strongly favored the enactment of such a law and since its enactment have cooperated with the State Civil Service Commission in applying its provisions to the harbor force. From results thus far visible, we have no hesitation in heartily repeating our former indorsement of this system of appointment.

Pier No. 54.

The defective condition of pier No. 54, occupied by the Santa Fe Railroad Company, was noted in our last report (page 29).

It was due to the fact that a long ledge of rock reaching high above the dredge limit had been carelessly left by the engineer of the former Board along the north side of the pier, besides other rocky points and surfaces in the neighboring water. This defect has been remedied by widening the pier ten feet, throughout its length, so as to cover the ledge, and the remainder of the rocky outcroppings in the area outside thereof have been successfully blasted out.

Nine Million Dollar Bond Issue.

The nine million dollar bond issue by the State of California, under the San Francisco Harbor Improvement Act of 1909, the proceeds of the sale of which constitute what is known as the "Second San Francisco Seawall Fund," has all been sold by the State Treasurer.

As the bonds carry only four per cent per annum and could not under the law be sold at a discount below par, great difficulty was found

by the State Treasurer in selling them during the financial stringency of 1913, and finally sales came to an absolute stop, as some of the leading cities of the state were offering in vain at the same time their bonds carrying five per cent per annum.

The last legislature, however, came to the rescue of the harbor bonds and by two acts facilitated their sale. (Stats. 1913, page 563, act of June 10, 1913; and page 1155, act of June 16, 1913.)

Under the former act the State Board of Control bought a large part of the harbor bond issue. Under the latter act the state loaned the Harbor Board not to exceed \$500,000, to go as a commission on sale of the bonds, the loan to be wholly repaid to the state by the Harbor Board out of harbor revenues within five years, in equal yearly installments. By the aid of this commission, the State Treasurer was enabled to dispose of bonds to the amount of \$4,767,000. The commission thereon amounts to \$476,700, which will have to be repaid to the state at the rate of \$95,340 per year; the harbor thereby being deprived of the means of making improvements out of current revenues to just that extent.

The financial reports of the secretary will show the present condition of this fund.

Events have shown that such bond issue was vitally needed by the port, and that it would have been necessary in order to replace existing dilapidated wharf structures by the wholesale, even if the new trade to follow the Panama Canal were not in question at all.

**Construction Program When Completed Will Exhaust
the \$9,000,000 Bond Issue.**

None of the bonds of this issue were sold prior to our taking office. The first sale was in October, 1911.

The harbor improvements already completed, those under contract now pending, and those planned as above set forth, will all be covered, it is estimated, by the nine million dollar issue, but will very nearly exhaust it.

Bond Money Devoted to New Construction.

Although the terms of the bond act, which authorized the use of the money in betterments of all kinds, are sufficiently broad to warrant the Board in using the bond money in making any harbor improvement, in its discretion, the Board has consistently adhered to the policy of devoting the bond money exclusively to new constructions. All repairs and, indeed, much wholly new and additional construction work in new territory have been paid out of the current revenues, deposited in what is known as the "San Francisco Harbor Improvement Fund."

New Construction Paid For Out of Current Revenues.

Conspicuous illustrations of the Board's success in paying for new constructions out of current revenues are the following:

1. New Pier No. 46—200 feet wide, 800 feet long, at the foot of Channel street. The entire contract price of the work and labor of constructing this pier was paid out of current revenues-----	\$176,892 13
2. Rebuilding of Piers Nos. 19, 23, 25 and 27, with new creosoted piles, to take the place of the old disintegrated concrete cylinder supports of the same, and also 16th street wharf, cost, exclusive of piles-----	85,826 74
3. Purchase of land by condemnation, 19,657.69 sq. ft. at the foot of Harrison street, to widen The Embarcadero to 200 feet; cost-----	58,597 95
4. New concrete belt line round-house, with seven stalls; cost -----	37,422 13
Total -----	\$358,739 05

Ten Million Dollar Bond Issue.

At the suggestion of this Board, contained in its last report, the legislature of 1913 passed a further bond issue of ten million dollars for harbor improvements, to be voted upon by the people of the state at the general election in November, 1914. This was recommended in order to provide for any urgent need of abnormally rapid development of additional harbor facilities that might possibly be required by an abnormally rapid increase of trade upon the completion of the Panama Canal, and which the current revenues might be insufficient to provide.

Of course, no part of the bonds need be sold unless an emergency, such as that noted, should arise; and until sold, no additional interest burdens would accrue.

Owing to the fact that bond issues under the State Constitution must be authorized by the people at the general election following the session of the legislature submitting them, and that a period of over two years must therefore elapse before the bonds would be available for sale, it was deemed wise, in view of the great importance of the matter and the uncertainties involved as above outlined, to have them ready for sale in whole or in part, as circumstances may require.

Panama Canal.

The official opening of the Panama Canal is set for the beginning of the year 1915. Nevertheless, the canal was sufficiently completed in July, 1914, so as to permit of its partial use, by vessels of a limited draught. Even so, the growth of shipping in the past few months, due to its use, has been so great that it looks very much as if the fondest hopes of its great utility are soon to be realized.

The great European war makes prophecy in this regard somewhat dubious, but the present outlook for an enormous gain in the shipping

of the port is most encouraging. The figures at present available indicate that the trade has about doubled since the canal was opened as stated.

India Basin and Islais Creek Lands.

The suit for the condemnation of the Islais Creek lands, begun by our attorney, as noted in our last report, is still pending in court. There was a delay in proceedings at the suggestion of the Attorney General of the state, to await the decision of the State Supreme Court on the San Pedro tide land cases, the decision of which, it was thought, might affect the question of the ownership of the Islais Creek lands in favor of the state and thus save the cost to the state of their purchase price. Recently, however, the Attorney General has advised our attorney to proceed with the condemnation proceedings theretofore instituted, and the suit is now actively in hand. It is being stubbornly contested by a number of the largest proprietors and progress is thereby retarded.

Drawbridge Over Islais Creek.

It was stated in our last report that this Board had set in motion the necessary legal machinery to compel the construction of a drawbridge over Islais Creek at Kentucky Street, by certain railroad companies using the roadway of the latter street. This bridge was subsequently contracted for and the work is now in progress.

Inadequate Fire Insurance.

In our last report attention was called to the inadequate fire insurance on the harbor facilities. It is limited by law to a total of \$700,000, in our judgment an utterly inadequate amount. We again recommend that the maximum limit be raised by law to at least the sum of \$1,200,000.

Concrete and Creosoted Wood Construction.

The harbor engineer's report will show the character and type of pier construction in detail. But it is proper here to note that some discussion has arisen over the comparative merits of concrete and other character of supports for wharf structures, and to state the Board's policy in this regard.

The Board's policy has been simply to follow in each particular instance the best engineering opinion available. This being a technical question it should be decided on technical considerations, and in every case we have adopted the particular type of construction recommended by the harbor engineer.

The water front varies greatly in its foundations. In a few places it is rocky or hard. In most places, the mud is very deep and in certain sections extremely soft. Most of it is filled ground, and fre-

quently localities near each other differ greatly because of the jutting out of rock ledges from the hills formerly or now along the front. The engineer suits his plans, necessarily, to the natural conditions, and, of course, regard must be had to the engineering cost as well as to the engineering possibilities.

On the better foundations, the engineer has recommended concrete supports, and in the muddy places different types of construction, according to circumstances.

Where the engineer has recommended concrete supports, the Board has adopted the same, and accordingly the following piers, to wit: Nos. 26, 28, 30 and 32, are wholly supported by reinforced concrete columns of from three to four feet in thickness going down to the bottom of the bay, which was never done with concrete before in these waters. This was possible because of the firm foundation in that particular locality.

In other localities, pier No. 17 and pier No. 39 have been built with concrete supports, sunk deep into the mud, but resting ultimately on wooden piles driven below the mud line. Here it was simply impossible, consistently with the factor of engineering cost, to go down to a solid foundation. Indeed, in many localities, no solid foundation has ever been reached by the longest wooden piles ever driven, over 115 feet in length.

Similar conditions governed the type of construction used by the engineers of the United States transport docks at Fort Mason, San Francisco. Nominally, these docks are commonly referred to as having concrete supports, but, as in the case of our pier No. 39, the concrete columns under these docks rest at bottom on wooden piles driven into the mud.

An entirely new type is being tried in pier No. 35, now under construction. There, reinforced concrete piles made on shore are being driven in place by a steam hammer. No wood will be used under them. Such construction has recently been employed for the supports of "skyscrapers" in San Francisco. We have also used it in the supports of the ferry slip aprons, and also in the seawall.

In other localities, of deep mud foundations, the engineer has used creosoted wooden supports, to wit, in piers Nos. 15, 16, 18, 22, 24, 46, 37 and 41. This type is very commonly used over the country.

Creosoted wood construction, it is estimated, will last in these waters from fifteen to twenty years. With our present revenue system, all such piers will out of their surplus of earnings provide a fund for their replacement when worn out, and they are, therefore, in effect perpetual.

Whether or not concrete piers will last practically forever, as claimed by some of their advocates, or even as long as creosoted wood, is entirely

a matter of experiment and experience. They are comparatively of very recent use in the United States and, therefore, necessarily, experience will have to be awaited before results can be stated with positiveness.

All concrete is not the same. The concrete wharves and piers built by previous boards of harbor commissioners have been for the most part costly failures.

As pointed out above, piers Nos. 19, 21, 23, 25, 27 and 10, all had concrete supports, and all of them disintegrated inside of fifteen years. No. 27 was built in 1907, only seven years ago, and was as bad as the rest. Concrete supports of modern construction cost about three times as much as creosoted wood.

A committee of three engineers of repute, appointed by the San Francisco Chamber of Commerce to investigate and consider this question, made a written report, which entirely coincides with the policy recommended by our own engineer and adopted by this Board, and for record purposes we append the same.

Materials Furnished Contractors.

The policy of the Board has been to buy and test its cement by its own force, and to supply the same and also the creosoted piles to the contractors, who furnish the work and labor in pier and other constructions. The same policy has been followed in the purchase of steel rails for the belt railroad.

New Seawall Lots and Blocks Added.

By the building of new sections of the seawall and filling up the water-lots behind the same within the past two years very valuable additions have been made to the state owned harbor lands, and the new and adjacent streets have been improved in accordance with municipal regulations.

The following is a list of such lands:

1. Lot No. 18, at the northeast corner of Spear Street and The Embarcadero, area 26,793 square feet.
2. Lot No. 19, bounded by The Embarcadero, Main and Bryant streets, area 14,623 square feet.
3. Lot No. 20, bounded by The Embarcadero, Beale, Bryant and Main streets, area 93,668 square feet.

In addition, the Board is reclaiming by the filling process two water blocks north of Jefferson Street, between Jones and Leavenworth streets, each 275 feet by 412½ feet, and the reclamation is now about half completed.

The filling in of all this property was effected with but little expense to the Board, by establishing free dumps for the use of contractors and property owners generally throughout the city of San Francisco, our

only expense being the pay of the necessary inspectors of the material dumped and a few laborers.

Street Improvements.

Nearly every large city in the country with a water front suffers from wretched street conditions in the neighborhood of its water front. San Francisco has been no exception, but in the past two years gratifying progress has been made by the municipality on the streets under its jurisdiction, and the Harbor Board has consistently followed out the policy, where the dividing line of the two jurisdictions runs down the center line of a street, of improving the state half of the street in prompt cooperation with the improvement of the city half.

Besides, the pavement of The Embarcadero has been largely repaired, and the new stretches obtained by the reclaiming process have been nearly all improved, some delays being unavoidable because of the lapse of time necessary to permit of the necessary settling.

Under the law, the entire cost of street improvements on The Embarcadero and the neighboring streets under the state jurisdiction comes upon the Harbor Board, as well as the cost of maintenance and cleaning.

The cleaning is done by contract at an expense to the Board of about \$14,000 annually.

The particulars of street improvements are mentioned in the engineer's report.

New Sidewalks.

The sidewalks along the water front throughout its whole extent, with slight exceptions, were wooden and much deteriorated. Within the past two years the Board has steadily replaced them with new asphalt sidewalks and the work is still in progress.

New System of Street Lighting.

The electrical department under the Board has been particularly active with many improvements, especially in the matter of street illumination, and a line of handsome new electroliers has been installed on The Embarcadero throughout nearly its whole extent.

The water front is now one of the best lighted portions of San Francisco.

Wires Placed Underground.

No feature of large cities is more detrimental to appearance and, indeed, more dangerous, than the overhead wire system of public utility companies, for telegraph, telephone, gas, power and lighting purposes, etc. A beginning has been made in San Francisco to place them underground.

The Board has adopted a similar policy on The Embarcadero, and ordered all overhead wires to be placed underground. Much of this work has been completed and the rest is steadily in progress. The improvement in the appearance of the street is most noticeable.

PART II.

REPORT OF ASSISTANT STATE
ENGINEER.

Pier 28.

Piers 30-32.

Report of Assistant State Engineer.

SAN FRANCISCO, July 1, 1914.

To the honorable Board of State Harbor Commissioners, San Francisco, California.

GENTLEMEN: I have the honor to submit herewith my report as assistant state engineer, assigned to your honorable Board for the term beginning July 1, 1912, and ending June 30, 1914, during which the work was under my direction from August 8, 1912, Mr. A. V. Saph having been in charge until the latter date.

At the end of the last biennial period, June 30, 1912, four contracts had been awarded for the construction of five new piers numbered respectively piers 17, 26, 28, 30 and 32. At the time of my appointment, active work had been begun on pier 17 and the twin piers 30 and 32 only, the former being 24 per cent and the latter 4 per cent completed. All these piers have since been finished essentially as planned and placed in service, the only modification having been in the design of the outer portion of pier 17, by the substitution of cement grout as a filling between the wooden piles and the concrete cylinders enclosing them in place of sand as originally planned.

The layouts which had been tentatively adopted for the improvement of the northern portion of the water front from Lombard Street to Fisherman's Wharf and of the southern portion between Mission and Harrison streets were revised and formally adopted and the preparation of plans in accordance therewith was carried on, but owing to unfavorable financial conditions and the impossibility of disposing of the balance of the bond issue, construction could not be commenced with vigor. A few contracts were let, but the general plan of improvement could not be taken up in earnest until the beginning of 1914; since that time, however, the work has been pressed and an energetic effort is being made to put the water front in condition to handle the expected large increase in traffic consequent upon the opening of the Panama Canal.

As the engineering department embraces several subdivisions, it will be necessary to report on the work of each separately, as follows:

1. Construction, seawall, piers and wharves.
2. Maintenance and repairs.
3. Belt railroad.
4. Ferry slips and buildings.
5. Street work and maintenance.
6. Electrical department.
7. Dredging.
8. Testing department.

1. Construction.

Seawall, Sections 9A and 9B. Section 9A of the seawall is 990 feet long and extends southerly from the end of section 8 near the foot of Mission Street to the foot of Folsom Street; section 9B is 780 feet long, extending from the southerly end of section 9A, at the foot of Folsom Street to the northerly end of section 9 at the foot of Harrison Street.

Both these sections are of the same type and differ in several respects from sections 8 and 9. The crest of the rock wall is higher and is placed at the curb line of The Embarcadero, 60 feet back of the water front line, instead of 27 feet as in section 9, giving greater depth of water at the edge of the bulkhead, and, as the concrete retaining wall is located at the crest of the rock embankment, affording the additional advantage of a uniform foundation for the bulkhead pavement. This uniform foundation will prevent the unequal settlement which has been observed in bulkheads built on the type of section 9 in which the outer 27 feet of the pavement rests on the concrete slab and the inner 33 feet on an earth fill.

The concrete retaining wall is much smaller in section than those used in sections 8 and 9 and is carried down to 13 feet below city base instead of 30 feet, as in the two latter sections, making it possible to deposit all concrete in the dry instead of placing some of it under water, as was necessary in sections 8 and 9. The bottom rests on wooden piles cut off at low water and surrounded by rock and consequently not liable to decay or attack by marine borers.

The deck is supported by reinforced concrete piles sixteen inches square, driven through the rock embankment; in order to avoid shattering the tips, it was found necessary to shoe the piles.

On account of the mud bottom on which the rock wall rests, it was considered advisable to make provision for possible future settlement by constructing the deck of the bulkhead wharf of steel beams carrying a plank and asphalt pavement; the deck can later be raised if necessary, the steel concreted and the planking replaced by a concrete slab.

Section 9A is 76½ per cent completed at the present time and it is expected that both sections will be finished by January 1, 1915. When completed there will be a continuous line of seawall from Mission Street to the north line of Channel Street extended and as stipulated in the China Basin lease the outer 100 feet of the thoroughfare along China Basin will be placed under control of the state.

Piers and Bulkhead Wharves. Before proceeding with the preparation of plans for new piers, the question of the proper class of construction to be employed was thoroughly discussed and it was decided that the use of creosoted piling in certain cases would be preferable to the exclusive use of reinforced concrete, which latter has been used, where deemed practicable. There were several reasons for making this

decision, viz: the great depth of mud along the water front from the foot of Harrison Street to the foot of Grant Avenue, entailing excessive cost of construction in concrete on account of the depth and difficulty of foundations, the urgent necessity of being prepared for the opening of the Panama Canal in the very near future, the constant changes in vessels and freight handling methods bringing with them the possible need of early reconstruction to meet new conditions, coupled with the great expense of such reconstruction in a concrete pier and last but not least, the uncertainty among engineers regarding the probable life of reinforced concrete structures in sea water. It may be remarked that the choice of creosoted pile construction in certain localities agrees with the recommendation to the Maritime Affairs Committee of the San Francisco Chamber of Commerce by a commission of engineers appointed by it for the purpose of examining conditions and reporting thereon. A copy of the latter report, as a matter of engineering interest is appended hereto.

Observations at the northern portion of the front disclosed the fact that there was a strong tidal current at this point, which might endanger wooden pile structures and it was decided to build the three most exposed piers of the seven contemplated for this section of concrete, to act as breakwaters and to deflect the current eastward away from the shore. For this reason piers 29, 35 and 39 have been designed as reinforced concrete piers, piers 29 and 39 as concrete cylinder piers, resting on wooden piles below the mud line, and pier 35 as a pile pier; and the completion of pier 39 has demonstrated that the object has been attained.

Wherever possible, shipping men were consulted on the most advantageous arrangement of piers, location and character of tracks, sizes of doors, width of slips, etc., and designs were prepared in accordance with their suggestions. All new piers are provided with at least one track and where width permits with two, one surface and one depressed, the latter being generally placed on the northerly side, and provision is made for the possible future installation of cranes for handling freight by building the substructure and shed columns heavy enough to carry them. Doors are of ample size, usually twenty-two feet high and twenty feet wide and are equipped with steel rolling shutters which possess the advantages of easy operation, durability and low maintenance cost.

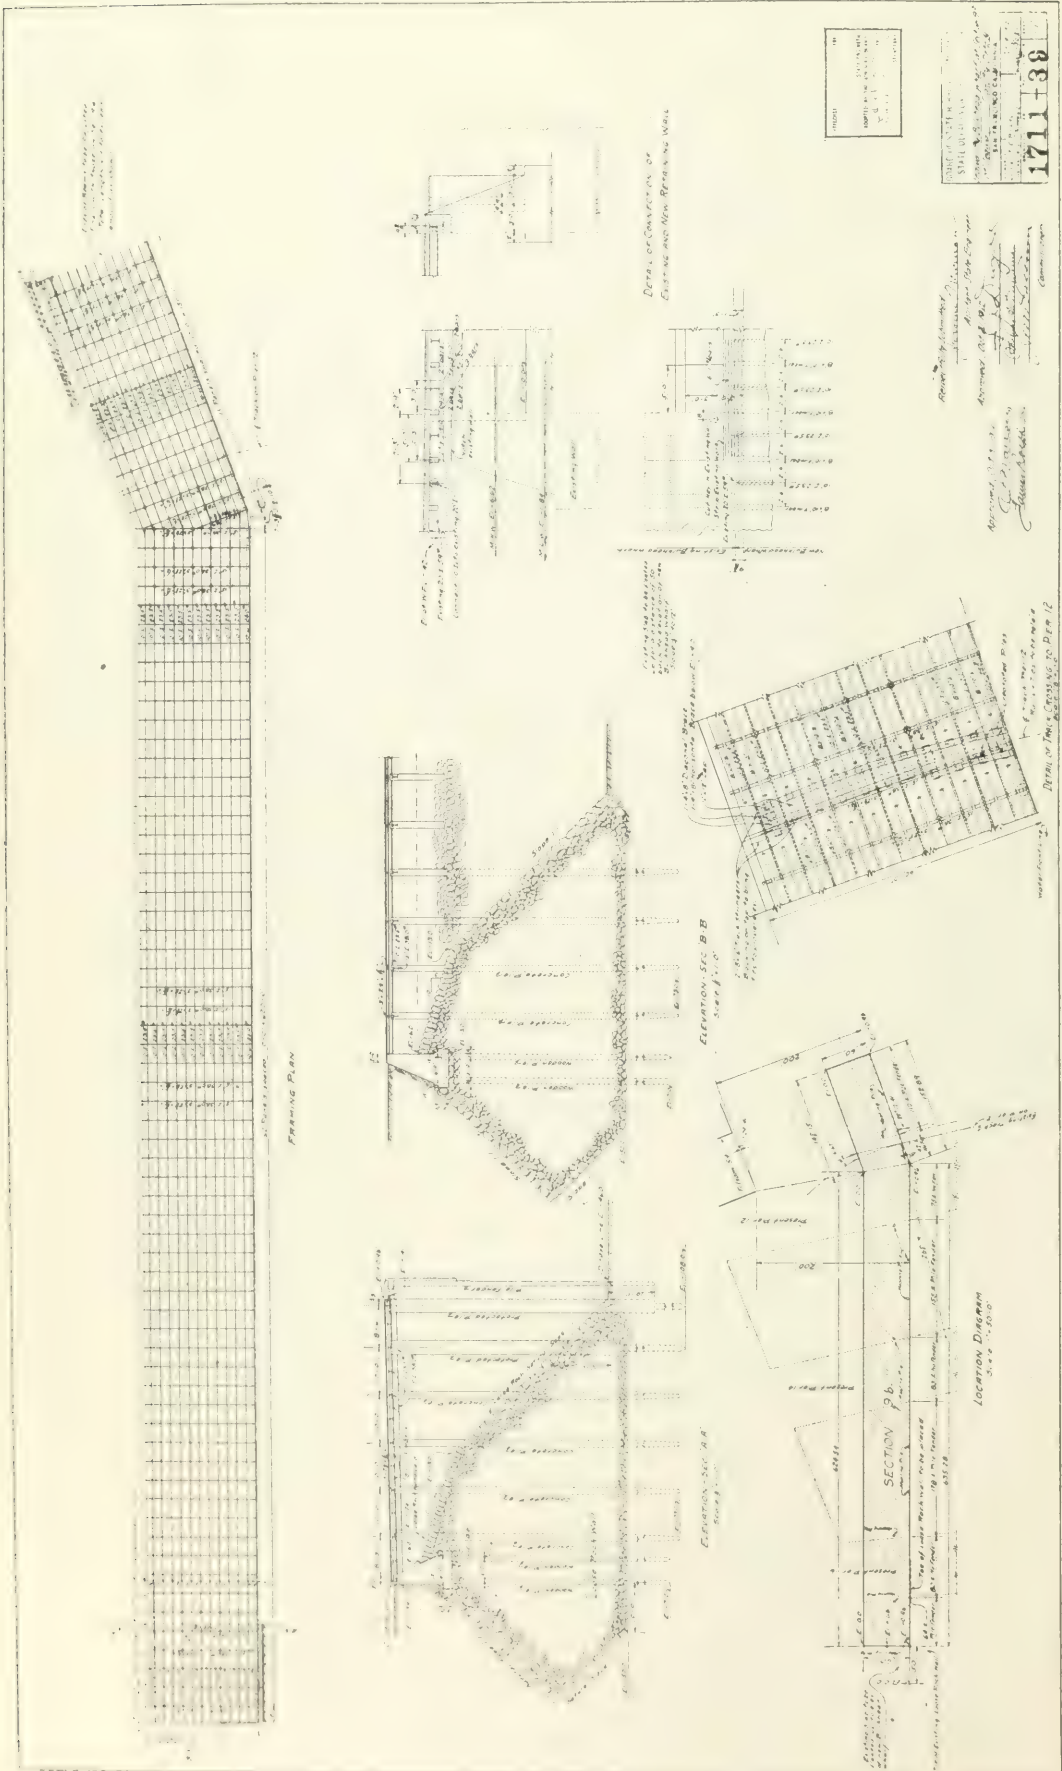

Wherever necessary, the contract for a new pier has included the reconstruction of the adjacent bulkhead wharf either in timber or concrete, depending on circumstances. The wharf connecting with pier 46 is of creosoted piling, those at piers 15, 30 and 41 are of reinforced concrete.

BOARD OF STATE HARBOR COMMISSIONERS

Plan of Passenger Ferry Slips 7, 8, 9 and 10.

Creosoted pile fenders protected by untreated Oregon pine sheathing have been employed in place of the untreated fender lines heretofore used and wood block pavements in the driveways of wooden piers have been substituted for planking. A large percentage of the total cost of repairs is expended on fenders and planking and it is certain that even with the increased first cost, the above changes will result in materially decreased annual cost, the creosoted piling having ten to twelve times the life of untreated piles and the block pavement four to five times that of planking.

To add to the attractiveness of the front, the old ugly type of shed front was abandoned and the pier fronts south of Market Street are to be built in modified mission style, those north of Market Street being designed on the lines of the Chelsea piers in New York.

Pier 39. This pier is 140 feet wide, its length on the westerly side being 879 feet and on the easterly side 938 feet, the difference in the lengths of the sides being due to the inclination of the pier at an angle to the seawall. The substructure consists of reinforced concrete cylinders three feet and three and one half feet in diameter, carried down from ten to fourteen feet below the dredge line and supported on wooden piles. The deck construction is of the usual transverse girder, longitudinal beam and slab type with a center driveway and a railroad track on each side of the pier, the easterly one being flush and the westerly one depressed. The pavement is Ohio wood blocks in the driveway and asphalt on the remainder of the deck. The fenders are of the suspended type, the same as those used on the new piers at the south end.

In addition to the pier, the contract included the construction of two adjacent sections of reinforced concrete bulkhead wharf, 44 feet wide and extending back of the pier and 144 feet westerly and 175 feet easterly therefrom. The rock wall at this point, having been built in 1878, and being consequently thoroughly compacted without danger of further settlement, was repaired where necessary and concrete piles driven through it, supporting a reinforced concrete deck paved with asphalt. The retaining wall is 16 inches thick and is carried down to nine feet below city base.

Plans for a two story steel and concrete shed with a bulkhead building projecting to within fifteen feet of the curb line have been prepared; this shed is arranged with offices, waiting rooms, baggage chutes, elevators, etc., for the accommodation of passengers, for which service the pier may ultimately be used. For the present it will be used for the grain sheds.

Pier 39 was completed May 7, 1914, and a contract was let for moving the grain shed from the bulkhead wharf near by to serve as a temporary shed on this pier until the permanent structure is erected.

Pier 46. This pier is 800 feet long by 200 feet wide and is constructed of creosoted piling, carrying a timber deck with two surface tracks. The design is of the ordinary type and there are no features of special interest.

The pier shed is of timber with sliding wooden doors, 22 feet high and 20 feet wide and with a center driveway. The deck planking consists of a layer of Oregon pine with a wearing surface of cedar.

In connection with this contract considerable work has been done in placing the adjacent bulkhead wharf in good condition.

Pier 46 was 46 per cent completed on June 30, 1914, and is expected to be entirely finished about September 15.

Pier 54. This pier was built in 1910 on a rock ledge extending under a part of the pier and the northerly and southerly slips, and it was found necessary before the structure was completed and accepted to blast the rock on the northerly and southerly sides to the dredge line in order to afford sufficient depth to accommodate vessels berthing alongside. A contract for the blasting had been let in June, 1910, and this was carried on while the pier was building, a work attended with much difficulty and some danger to the outside row of cylinders supporting the pier. It was finally decided to leave a ledge six feet wide outside the north row of cylinders where the rock was hard and chisel out the rock beyond this ledge until a sufficient distance had been reached to render blasting safe; the entire area over which the rock was present was then blasted out to the dredge line.

On account of the ledge which was left on the north side, it was not possible to dock vessels with safety and an extension ten feet wide was built along the entire length of this side, this extension being supported on reinforced concrete piles set on the rock ledge for the outer 441 feet and on creosoted piles driven into the mud for the inner 339 feet. The deck on the concrete pile section consists of reinforced girders and beams carrying a slab and that on the creosoted pile section is of timber covered with plank. The deck on both sections is securely bolted to the original structure and the entire area is paved with asphalt.

The extension was completed on June 30, 1914.

Pier 41. This pier is 200 feet wide, its length on the westerly side being 881 feet and on the easterly side, 1081 feet. It is supported on creosoted piling, has a timber deck with two surface tracks, and is paved along the driveway in the center with bituminous concrete and on the sides in the cargo space with asphalt. The fender line consists of creosoted piles protected by untreated Oregon pine sheathing extending to below low water.

This pier is an open one and it is not intended to erect a shed on it. It is intended to be used for lumber, steel beams and all kinds of bulky cargo.

In connection with the pier there is to be constructed under the same contract a section of reinforced concrete bulkhead wharf back of the pier and 149 feet easterly therefrom; this is identical in design with the wharf adjoining pier 39.

Pier 41 was 21 per cent completed on June 30, 1914, and is expected to be finished about December 1, 1914.

Pier 15. This pier, which is to replace the old one at the same place, condemned on account of its dangerous condition, is 794 feet long and 90 feet wide. It is a creosoted pile pier with timber deck having one surface track located near the center to serve the coal bunkers on the southerly side, with a pavement of cedar plank on the driveway under the coal bunkers and of bituminous concrete outside the bunkers. The fender line is constructed of creosoted piles with untreated Oregon pine sheathing.

The northerly half of the pier is to be built first and the coal bunkers moved temporarily to this portion when completed, after which the southerly half will be constructed and the bunkers then moved to their permanent location on this portion. There will be no shed, none being needed.

The contract for this pier includes the building of a section of reinforced concrete bulkhead wharf back of the pier and 101 feet northerly, having a width of 41 feet and supported on reinforced concrete piles driven through the old rock seawall. There is a concrete retaining wall at the inside, carried down to thirteen feet below city base and resting on wooden piles also driven through the seawall. The deck is of the usual girder, beam and slab type and is paved with asphalt.

Pier 15 was six per cent completed on June 30, 1914, and will probably be finished about January 1, 1915.

Pier 27. An extension twelve feet wide was constructed along the entire northerly side of this pier for the purpose of carrying a surface track. This extension is supported on creosoted piles and has a planked timber deck. Under the same contract, extensive repairs were made to this pier and the adjacent bulkhead wharf which will be described under "Maintenance and Repairs."

The extension to pier 27 was completed March 19, 1914.

Pier 25. An extension fourteen feet wide was constructed along the entire southerly side of this pier to carry a surface track; this is similar in design to that used on pier 27. It was completed on April 30, 1914.

Miscellaneous. The outer 337 feet of Sixteenth Street wharf was brought out to full width by building a 77 foot extension on the north-erly side; this was completed February 6, 1913.

A creosoted pile bulkhead wharf 290 feet long with an average width of 110 feet was built in front of section 8 of the seawall and was completed January 2, 1913. This was designed for temporary use during the construction of the seawall south of Mission Street.

A creosoted pile bulkhead wharf 411 feet long and 60 feet wide to accommodate government vessels and lumber schooners is in course of construction north of Fisherman's Lagoon and will be completed in one month.

Projected work. Plans have been prepared or are in course of preparation as follows:

New piers, numbered 16 and 18 to be located between Howard and Folsom streets; these plans are completed and contracts may be let as soon as possible.

Piers 35 and 37, located respectively at the foot of Montgomery Street and the foot of Kearny Street; these are 80 per cent completed.

Piers 22 and 24, located near the foot of Harrison Street; these have just been begun.

Seawall extending from Jones Street to Larkin Street; instructions have been given to prepare these plans and in connection therewith to provide for the removal of Fisherman's Lagoon to the blocks north of Jefferson Street, between Hyde and Larkin streets.

2. Maintenance and Repairs.

The ordinary repairs to piers, bulkheads and ferry slips have been made by the state force, but some large jobs amounting to practical reconstruction of piers were let by contract. In order to determine the relative cost of small work by contract and by day's labor, a comparison was made for one month on the basis of actual work done, taking into account for the state force all pay roll and proper material charges and increase in wages since the contract system was abandoned as against prices paid for contract work in 1910-1911. The comparison showed a saving of 35 per cent and this would justify the adoption of the present system if no other reason existed; it may, however, be accepted as a fact that work done by forces under the direct control of those who pay for it is of better quality than that done by contractors and the conclusion is warranted that the day's labor system now in use for small repairs results in better work at a lower cost than the contract system.

Disintegration of concrete supports of five piers. In order to ascertain whether repairs were necessary, piers 19, 21, 23, 25, all constructed in 1901 and pier 27 constructed in 1907, all of which are supported on

cylinders of plain concrete deposited in water and carried only a few feet below the mud line, were examined by divers and their condition found to be as follows:

The 234 cylinders under pier 19 contain three piles each; of these cylinders, three had fallen, the disintegration of the concrete in 157 had exposed the piles and 74 were in good condition.

The 234 cylinders under pier 21 contain three piles each; of these cylinders, two had fallen down, the piles in four had been eaten off, leaving them hanging on the caps, the disintegration of the concrete in 166 had exposed the piles and 62 were in good condition.

The 234 cylinders under pier 23 also contain three piles each; of these cylinders, 15 had fallen down, the piles in two had been eaten off, the piles in 140 were exposed and 77 were in good condition.

The condition of the outer 60 feet of pier 25 having become dangerous some four years ago, repairs were made by driving a creosoted pile on each side of the cylinders. There were 274 three-pile cylinders under this pier, of which 18 had fallen down, the piles in 12 had been eaten off and those in 135 were exposed, the concrete in 22 showed disintegration and 87 were in good condition.

Of the 400 one-pile cylinders under pier 27, 58 had disappeared, the piles in 49 had been eaten off, those in 40 cylinders had been exposed by the destruction of the concrete, which had also begun to crumble in 32 others without, however, exposing the piles, and 221 were in good condition.

The results of the diver's examination showed the necessity of making repairs to these five piers and instructions were given to do so. The repairs to piers 25 and 27 were included in the contracts for the spur track extensions previously described and on the completion of these contracts, another was let for the repair of pier 19; this last was 12 per cent completed on June 30, 1914, and it is intended to begin work on the remaining two piers as soon as possible.

The repairs are made with creosoted piles which are driven under the timber caps of piers 19, 21, 23 and 25 and in the case of pier 27 carry sub-caps supporting the steel caps of the pier. The defective cylinders are to be loosened and laid on the bottom, care being taken to prevent damage to the piles during the lowering. These repairs will insure about fifteen years' further useful life of these structures, at the end of which time it will be cheaper to tear down and rebuild than to attempt to maintain them.

3. Belt Railroad.

A large amount of work has been done on the belt railroad, both in the way of additional spurs serving piers and industries and sidings and extensions. Mention has already been made of the fact that all

new piers are provided with one or two tracks, those completed and under contract being as follows: Piers 46, 32, 30, 28, 26, 37, 39 and 41, two tracks each and piers 15 and 17 one track each; of those projected, piers 16, 18, 29, 31, 33 and 35 are to have two tracks, while those to be numbered 24 and 22 are to be supplied with one. Spurs have also been constructed to piers 25 and 27 and it is intended to place one later on pier 13.

A decided improvement in operating conditions was effected by the building of that portion of the line crossing the foot of Market Street and connecting the northern and southern divisions; this link is 3,900 feet long and extends from Folsom Street to Broadway. Some difficulty was experienced in the construction of the section in front of the Ferry Building and extending north to Clay Street; The Embarcadero at this point is a sand fill carried by a timber platform supported by piling cut off at low water level and it was necessary for a distance of 390 feet where the piles were too far apart to carry trains safely, to trench the street, drive the required additional piles and lay a new plank platform to retain the sand. The entire connection was completed and ready for operation on January 27, 1913.

The belt railroad is being further extended from the foot of Powell Street, its former northerly terminus, by the construction of the line to the government transport docks at Fort Mason. This line begins at the corner of Powell and Jefferson streets, and runs westerly along Jefferson Street to Van Ness Avenue, turning thence to the corner of Beach and Laguna streets and connecting with the government tracks to the transport docks and warehouses and also with the tracks of the Panama-Pacific International Exposition. Between Taylor and Jones streets, where it runs along the southerly edge of Fisherman's Lagoon, and between Larkin Street and Van Ness Avenue where it crosses the cove east of Black Point, it is on trestle and under the government reservation at Fort Mason, in tunnel. The trestles are open deck, built in accordance with standard railroad practice, having creosoted pile bents and creosoted sway braces and girts; tower bents are spaced every 150 feet. The tunnel is 1,500 feet long, its easterly portal being situated 120 feet west of the westerly line of Van Ness Avenue and its westerly portal 245 feet east of the easterly line of Laguna Street. It is concrete lined throughout with a clear width of 17 feet and a clear height above top of rail of 22 feet. At the westerly end from the portal to Laguna Street, there are concrete retaining walls about 250 feet long, having a height of 27 feet at the portal face and four feet at the easterly line of Laguna Street; these walls were ordered built to save as much ground as possible for the use of the reservation.

The material encountered in the tunnel was a sandstone shale for the easterly 700 feet, clay in the middle 400 feet and sand in the westerly 400 feet. The easterly and middle portions were excavated by the ordinary heading and bench method, a center shaft being sunk to hasten the work, the westerly section in sand being taken out as an open cut and backfilled after the masonry was completed. The shaly rock from the easterly portion was used to make an embankment extending into the bay from Hyde Street to Larkin Street, and heavily riprapped along the northerly side and the westerly end to protect it from wash.

This extension, which is 1.09 miles long, was 47 per cent completed on June 30, 1914, and is expected to be ready for trains by November 1, 1914, in ample time to serve the exposition.

A reinforced concrete engine house containing seven stalls was erected on Seawall Lot 8, bounded by Lombard and Sansome streets and The Embarcadero. This building is provided with a drop pit, machine shop, blacksmith shop and store room; the engine house proper and the machine shop are floored with wooden blocks on a concrete base, the store room with concrete and the blacksmith shop with cinders.

It is expected that this engine house will suffice for the needs of the belt railroad for several years and when additional stalls are required another engine house should be built on the southern division.

This engine house was completed April 30, 1914.

The total length of line between the north side of Second Street wharf, the present southerly terminus, and Beach and Laguna streets, the proposed northerly terminus, is 3.70 miles. A comprehensive plan has been worked out for the track system between these termini which contemplates 1.86 miles of single track, 0.64 mile of double track and 1.20 miles of three track road, the number of tracks being determined by local conditions of railroad yards and tracks serving industries at different points. The single track sections extend from the north side of Second Street wharf to Berry Street, from King to Townsend Street, from Folsom Street to Broadway and from Powell to Laguna Street; the double track sections from Berry to King Street, from Harrison to Folsom Street, from Broadway to Green Street and from Battery to Francisco Street, and the three track sections from Townsend to Harrison Street, from Green to Battery Street and from Francisco to Powell Street.

To render possible the storage of cars during the season of heavy traffic, yards have been projected on Seawall lots 20 and 18 at the south end and on lots 1, 2, A and B at the north end; these yards will assist materially in doing away with congestion of the main line and in

assuring rapid delivery of cars to shippers and to the different railroad companies entering the city. Several of the tracks planned for these yards have already been laid.

4. Ferry Slips and Buildings.

Passenger Ferry Slips. Plans for new passenger slips at the north and south ends of the ferry system have been prepared, those at the north end being designated A and B and those at the south end being numbered 7, 8, 9 and 10; of these, slips B, 8, 9 and 10 are to be entirely new and slips A and 7 are to be partially rebuilt to fit the enlarged system.

The dolphins are to be constructed of creosoted piles carrying a timber deck covered with a double layer of planking at the outer end and with a single layer paved with asphalt on the inner portion. While the general type of construction is similar to that used in the older slips, several improvements have been made, such as strengthening the aprons to permit the passage of loaded trucks weighing twenty tons and reinforcing the noses of the dolphins and the clusters at the outer ends of the aprons with the object of reducing the liability to damage at these points, the most vulnerable parts of the fender line. The older aprons were capable of carrying a twelve ton vehicle, but as loads have increased since the general adoption of the auto truck, shippers who desired to send heavy machinery, etc., across the bay were put to serious inconvenience and expense on account of the limited capacity of the aprons and, to meet their wishes, the heavier aprons have been designed. The noses of the new dolphins are more heavily piled than other portions and are strongly braced transversely by continuous lines of timbers fastened to the piles and extending entirely across the dolphin, these timbers being placed both above and below the deck and bearing against the ribbons of the spring line. The clusters contain nineteen piles as against nine formerly. It is expected that these changes will result in decreasing repairs, as the nose and cluster are more subject to damage by ferry boats than any other part of the spring line and consequently oftener in need of repairs.

The end dolphin on the southerly side of slip 10 is to be of larger size than any of the others, its average length, measured from the water front line, being 670 feet and its width at the outer end, 120 feet; it is to carry a shed 110 feet wide by 430 feet long intended for express purposes. The berthing space of 650 feet on the southerly side of this dolphin makes this a particularly favorable location for small boats and launches and a space 60 feet wide outside the shed has been left for use of the business of these vessels. The end dolphin on the northerly side of slip B has a berthing space of 465 feet with a width at its outer end of 66 feet.

Foundations for upper deck aprons have been provided at all slips and contracts for these, wherever necessary, can be let after the completion of the slips.

Slip 8 was completed June 25, 1914, and contracts for slips 7, 9 and 10 will be let in the near future, in time to insure their being available for use before the opening of the Panama-Pacific International Exposition.

Car Ferry Slips. The present car ferries at the foot of Lombard Street are to be torn out to make room for piers and two new ones are being built between the foot of Powell Street and the foot of Taylor Street. They are of creosoted piles carrying a timber deck planked with Oregon pine, which on the eastern dolphin is covered with a wearing surface of cedar to permit of teaming when this dolphin is used for berthing vessels. The construction follows the plan of the present car ferry slips in general, but with steel aprons and wider dolphins supplied with more tracks, there being two of these on the easterly dolphin, four on the middle one and two on the westerly dolphin.

In connection with the contract for the car ferry slips, the adjacent bulkhead is being reconstructed to carry tracks, this work being carried out in timber on the same plan as the slips.

The car ferry slips were 4 per cent completed June 30, 1914.

Buildings. Plans for buildings in the vicinity of the ferry slips are being prepared as follows:

Extension to the southerly end of the main Ferry Building to be used for baggage purposes.

Post office building to be located opposite the foot of Mission Street with a connecting shed on the dolphin between slips 8 and 9.

Shed on the dolphin on the south side of slip 10 to be used for express purposes.

The Ferry Building extension is to be a one story structure 140 feet wide by 126 feet deep, carrying out the arcade treatment of the first story front of the main building. It is to be of frame construction with plastered exterior, the latter being painted to match the stone of the Ferry Building. There is to be a light steel frame shelter at the southern end for teams handling baggage and a two story steel frame and concrete structure behind the extension for the gangways for passengers to and from the upper and lower decks of ferry boats. The extension is to be supported by creosoted piles with a wooden floor, the rear gangways being carried on concrete piles with a concrete deck paved with asphalt.

The Ferry Building as originally designed included a wing at each side, which for lack of funds was not built. Ultimately, but probably not for some years, they will doubtless be added and will be of the

same stone as the present structure. For this reason the one story extension for baggage room purposes now in progress being only temporary in character, is of frame and plaster construction.

The interior is to be arranged for use by the Southern Pacific Company and the Western Pacific Railway. In connection with the erection of this addition, a part of the present baggage room at the southern end of the Ferry Building is to be remodeled to provide waiting room space for the Western Pacific.

The post office is to be 167 feet wide by 125 feet deep on the first floor with a second story extending the full width of the building and 58 feet deep. The construction is to be steel frame with brick walls, carried by concrete piles and a concrete deck paved with asphalt. The first floor is to be divided into work rooms for handling mail with the necessary space for the public and the second floor is to contain offices for the use of the office force. In addition there will be four mezzanine floors provided with lockers, etc., for the working force.

Connected with the main post office there will be a timber shed containing an area of approximately 16,000 square feet and divided into work rooms and storage spaces; this shed is to be built on the dolphin between ferry slips 8 and 9. The two story steel and concrete gangway in the rear of the Ferry Building extension is to be continued to the southerly end of the post office and from this point a one story structure is to be built over the passageway to the extreme southerly ferry slip.

The shed intended for Wells Fargo & Company is to be 110 feet wide by 430 feet deep on the first floor with a second story 202 feet deep across the entire width of the building; the construction is to be wood frame with plastered exterior. The lower floor is to be used for general office and work room purposes, the second floor being intended for the clerical force and for sorting and distributing express matter.

5. Street Work and Maintenance.

Besides the ordinary repair work done on The Embarcadero by Harbor Commission forces, considerable new work has been done by contract during the last two years in connection with improvements ordered by the San Francisco Board of Supervisors on streets bounding property belonging to the state. The different contracts of this character which have been awarded are as follows:

Paving the easterly half of Beale Street between Bryant Street and The Embarcadero, completed in April, 1913.

Sewering Bryant Street between Beale and Main streets, completed in May, 1913.

Paving the southerly half of Brannan Street from First Street to The Embarcadero, completed in June, 1913.

Sewering Steuart Street between Folsom and Harrison streets, completed in July, 1913.

Sewering and paving the southerly half of Bryant Street between Main and Spear streets and the easterly half of Spear Street from The Embarcadero to near Harrison Street; this has not yet been completed.

In addition to those enumerated above, a contract has been let for sewerage and paving The Embarcadero from pier 34 to pier 26, which was about 2 per cent completed on June 30, 1914, and it is intended to extend this pavement northerly as soon as feasible. Contracts will also be awarded for sewerage and paving Fremont Street from The Embarcadero to Brannan Street, and Main Street from The Embarcadero to Bryant Street; the property fronting on both sides of these streets is under control of the state and plans and specifications will be prepared in this office and the work done under our direction.

On account of the increasing traffic along the water front, especially at the southerly end, it is highly desirable in order to avoid congestion, that all streets leading into The Embarcadero be improved and the work enumerated above has been of material benefit in this respect.

6. Electrical Department.

The work of the electrical department during the past two years has been varied and extensive, numerous improvements in the lighting of piers and ferry slips having been effected and considerable progress made in placing wires underground.

The electric lighting system along The Embarcadero has been extended from pier 34 northerly to Harrison Street and from pier 11 northerly to pier 27 by the installation of 39 additional electroliers equipped with 250 watt and 400 watt tungsten lamps. Conduits, wires and post-holes are being placed in sections 9A and 9B of the seawall and bulkhead wharf now under construction and when these are completed there will be a continuous system of high efficiency electroliers, 110 in all, from Channel Street northerly to Lombard Street.

The problem of proper pier illumination has been the subject of study with the purpose of obtaining maximum efficiency with minimum cost. As a result of data obtained from trial installations, the large wattage Mazda lamp was adopted and this is replacing the arc lights formerly used; all but five of the piers have been equipped with the modern lamps and the changes on these piers will be made in a short time. The improvement in lighting due to these changes, with its accompanying economy, has met with the hearty approval of shipping men.

An underground conduit system for Harbor Commission wires has been planned from Channel Street to Lombard Street; of this, the section from the channel to Harrison Street has been completed, conduits are being placed in sections 9A and 9B of the new seawall and the

section from the Ferry Building to Lombard Street is about 85 per cent finished. A manhole is to be built opposite each pier entrance, from which conduits and service wires are to be led into the sheds.

Notice has been served on electric public service corporations to place their wires underground and this is gradually being done, a separate system of conduits being laid for these wires. All poles and overhead wires, with the exception of those owned by the United Railroads have already been removed from the Ferry Building north to Chestnut Street. All private service wires to piers or other state property are to be run into Harbor Commission manholes; the conduits and wires extending from the latter are owned by the Harbor Commission, thus minimizing inconvenience and delay when the contract for furnishing electricity passes from one company to another.

Five new fire boxes numbered from 934 to 938 inclusive have been installed on The Embarcadero between Channel and Harrison streets and have been connected with the fire alarm system of the city.

Precautions have been taken to protect the outer ends of exposed structures by installing fog bells and beacons, bells having been placed on piers 46, 32, 26 and 17, all connected with testing apparatus in the Ferry Building to enable the operator to be certain that they are ringing properly and beacons having been established on piers 46 and 39. In addition, new beacons of high power have been installed, one on the main ferry dolphin and another at the top of the tower and all pier head lights along the water front have been replaced by others of greater candle power. A Douglas fog signal of 25,000 candle power has been placed on the main ferry dolphin and a second is to be furnished for pier 39. Safety lights of large candle power have also been installed at every ferry apron and have proved of great benefit during rush hours.

A remote control system has been introduced whereby the street lights from the Ferry Building north to Chestnut Street are operated from the main switchboard in the Ferry Building and this will eventually be enlarged to include all Harbor Commission lights from Channel Street to Fisherman's Wharf.

The time service in the building had become the cause of much complaint on account of the unreliability of the tower clock and the various electric clocks in the offices and waiting rooms. The department investigated the subject carefully, collecting data from terminals in other cities and adopted a modern half-minute jump electric clock system, controlled by a master clock; this system is now being installed. At the same time, the Howard pendulum movement in the tower is being replaced by an electric movement designed by this department and controlled by the master clock operating the secondary clocks in the building; this movement was successfully tested for several months under actual working conditions before being installed.

7. Tugs and Dredgers.

The dredging equipment has been kept busy not only in maintaining the necessary depth at the older piers but also in excavating at the new structures wherever necessary before and after completion.

The smaller dredger, in addition to its ordinary work, spent considerable time in the troublesome task of taking out the rock blasted on the north side of pier 54 and the large machine was engaged at different times in pulling pile snags and dredging for sections 9A and 9B of the seawall.

The floating equipment has been kept in good condition in accordance with the requirements of the Federal Board of Inspectors; the expense of maintaining and repairing it has been quite heavy on account of its age and may be expected to increase as it grows older. Oil burners have been installed in both tugs and a considerable saving in operating cost has been effected by the use of liquid fuel in place of coal.

8. Testing Department.

This department has tested, both chemically and physically, all cement used on the work and has also passed on all rock, gravel and sand furnished by contractor for use in concrete; numerous tests have also been made on roofing felts, asphalt, paints, etc., furnished by manufacturers and intended for our work.

A series of long time tests has been begun to determine, if possible, the action of seawater on local cements and it is hoped to add something of value to our knowledge on this subject.

Authority has been granted for the purchase of an Olsen Universal Testing Machine of 150,000 pounds capacity and of an Olsen cold bending machine and these will be installed in the near future. This will enable us, instead of employing others to do our work, to make the necessary tests on all reinforcing and structural steel, concrete, brick, metals, wood, etc., in our laboratory; added to this advantage there will be a saving in the cost of this service, as the machine will pay for itself in doing the work already planned.

Respectfully,

JEROME NEWMAN,

Assistant State Engineer.

Rear View of Belt Railroad Engine House.

Side View of Belt Railroad Engine House.

REPORT ON TYPES OF PIER CONSTRUCTION.

SAN FRANCISCO, March 13, 1912.

*Maritime Committee, Chamber of Commerce,
San Francisco, California.*

GENTLEMEN: In accordance with your instructions we have made an inspection of the improved portions of the water front, and have investigated the conditions under which the piers or wharves must be constructed, and find that the type of pier or wharf constructed to be adopted, will, in general, be controlled by the character of the foundation.

We find that from piers 54 to 26 the foundation is hard pan overlaid with a comparatively thin layer of mud, and northerly from pier No. 26 to a point at the southerly end of the grain sheds the foundation is of mud of unknown depth, but increasing in density with depth.

In the past the type of wharf supports has been untreated piles, creosoted piles, and untreated piles encased in concrete and built under the Holmes patent, the Kaetitz patent and the Black patent, and reinforced concrete piers such as are constructed at piers 36, 38, 40 and 54.

In the waters of San Francisco Bay the untreated fir piling, as is well known, has but a short average life and is, therefore, not to be considered in the construction of new piers or wharves. Creosoted piling has a much longer life and will be referred to further along in this report. The untreated piling encased in concrete, of the types above mentioned, are subject to very rapid destruction by marine borers, if through any accident there should be a defect of any kind in the concrete protection, or if in the course of time, or by reason of unforeseen conditions the mud line should be so lowered as to expose the wooden piles. Many of the piers or wharves that have been constructed in this manner in the last few years are now in a very bad condition, due in a large measure to this cause.

For the construction of piers or wharves where hard pan foundation is found, we believe that if pile foundations are driven, owing to the shallow depth of the mud, such piles would have little or no support and would be very unstable unless a suitable filling of small rock or other material was dumped around them to provide sufficient lateral stiffness. The forming of such fills would in a great measure obstruct the tidal prism, and for that reason it is doubtful if permission could be obtained from the Federal authorities for such style of construction. This leaves no other suitable type of pier or wharf construction except the reinforced concrete pier style, such as has been previously mentioned.

which is a very excellent type of long life and low maintenance cost, but at the same time has the disadvantage of a very heavy initial expense, and is a very difficult construction in which to make alterations if the changing conditions of the port would make new arrangements necessary. This is mentioned in connection with the constant changes occurring in the manner of handling freight at both railway and seaport terminals and considering that in a very few years still more radical changes may be made which would mean very heavy expenditures to make the changes to meet the new conditions. Notwithstanding this, however, it would be our recommendation that on hard pan foundation this style of construction be adopted.

For those portions of the water front where the foundation is of mud of great depth, we believe it will be found most economical, in the long run, to build the piers, or wharves, using creosoted piles for supports, such piles to be of large butt size and of the best quality obtainable; the creosoting to be done by the most approved method known. The deck of such pier or wharf to be framed of creosoted caps with large floor joists, using 12x12 timbers, or similar size, instead of the usual 3x12 or 4x12 joists; to be planked over with 4-inch plank and surfaced with wood blocks laid on tar paper, or other approved form of paving, particular care being given to water-proofing that portion of the pier or wharf outside of the sheds. We believe that if piles of proper quality are procured, structures of this kind would have a useful life of at least twenty years. There are creosoted piles now in use supporting wharves on either side of San Francisco Bay, that have been in use for more than twenty years, and we have definite knowledge of other pile structures in similar localities in Central California where the expectation of life is as long.

Reinforced concrete piles were considered for piers or wharves where mud foundations occur, but, owing to their high cost, and the lack of experience with this type of construction, in this locality we would not recommend their adoption, but would advise that from time to time as opportunity offered, experiments be made with this type of construction.

It was our desire to submit exact figures showing the relative economy of creosoted pile piers, or wharves, and reinforced concrete piers or wharves, but owing to the fact that no records have been kept by the Harbor Commissioners, showing the cost of maintenance, we are unable to do so, but can only submit figures showing the first cost and the estimated cost of maintenance. In preparing this statement we have assumed that the cost of the creosoted pile wharf, as above described, is \$1.00 per square foot, and the cost of the reinforced concrete pier type wharf is \$3.24 per square foot, and have estimated the useful life of the creosoted pile wharf as being 20 years, and that of the reinforced concrete pier type of construction as permanent within the limitations, as

previously set forth. The following table shows the total annual charges for each type of wharf or pier construction :

	Creosoted pile	Reinforced concrete
Interest on first cost at 4 per cent.....	\$0.0400	\$0.1300
Annual maintenance0500	.0125
Replacement fund, 20 years.....	.0336
Redemption fund, 75 years.....	.0022	.0072
Insurance0060
Total annual charges per square foot.....	\$0.1318	\$0.1497

This would indicate that the creosoted pile, pier or wharf, was at least as economical a structure as the reinforced concrete type.

The style or kind of sheds that have been constructed on the different piers along the water front have ranged from the cheapest board and batten structures, with wooden frames, to the reinforced concrete type of building, and there seems to be a diversified opinion among shipping men as to the proper style of shed to construct. Taking into consideration the many changes that are going on constantly in the manner and methods of handling cargoes from ship to wharf, and from wharf to ship, we believe a type of moderate cost should be adopted, and would recommend that buildings supported by either steel or wooden trusses, preferably the latter, be erected, so designed as to make the members as large as possible; the roof to be constructed either of tar and gravel, corrugated iron or other similar roofing material; that the sides from the eaves to the heads of the doors and the ends to be constructed of corrugated iron; that rolling metal doors be provided along the entire length of either side. It is also recommended that in case wooden trusses are used that they be planked on either side with redwood timber to act as fire breaks. Of course, it is expected that buildings of this kind would be given the proper attention, be painted sufficiently and minor running repairs kept up. Such buildings would not in any sense be fire proof, but each pier should be protected with proper fire fighting apparatus, such as hose, fire extinguishers, etc.

With very small repairs sheds of this character would last a long time, and should it be found desirable at any time to make alterations due to changed conditions, they could be easily made.

In closing we take pleasure in acknowledging the very courteous treatment we have received from the Harbor Commissioners and their Engineer, and to acknowledge our debt to them for their hearty cooperation in giving us all the information at their command.

Yours very truly,

R. M. DRAKE.

LELAND S. ROSENER.

HENRY A. CAMPBELL.

PART IV.

REPORT OF THE ATTORNEY.

REPORT OF THE ATTORNEY.

August 27, 1914.

To the honorable, the Board of State Harbor Commissioners.

GENTLEMEN: Herewith please find my report from the first day of July, 1912, to the first day of July, 1914.

During that time I have submitted to the Board thirty-five written opinions and have rendered many verbal ones. I have drawn forty-five contracts, involving a total sum of \$2,175,337.23, exclusive of the amounts contracted to be paid for oil, piles, lumber, street cleaning, and electric light and power, and exclusive of any sum above the price of a minimum number of barrels of oil contracted for.

The following actions are pending in the Superior Court:

1. *Henry Cowell Lime and Cement Company vs. State of California* and the present members of the Board of State Harbor Commissioners, to enjoin the Board from entering into twelve feet, claimed by the plaintiff as the easterly line of its property at Market Street and The Embarcadero, and claimed by the Board to be a portion of the westerly line of The Embarcadero. The Board has answered and filed a cross-complaint in ejectment. The Cowell Lime and Cement Company by itself and its predecessors claim to have been in possession for fifty years.

2. *Johan Alfred Matsson vs. State of California*, the present Board of State Harbor Commissioners and the former board as boards, and the members of the present and former boards as individuals, to recover \$35,533 on account of the death of plaintiff's son, caused by his being struck by a train of cars on the belt railway. Demurrers to the complaint have been sustained as to the members of the present Board of State Harbor Commissioners and also as to the State of California, leaving the action pending against W. V. Stafford, W. E. Dennison and P. S. Teller as individuals.

3. *People of the State of California, ex rel Board of State Harbor Commissioners vs. Southern Pacific Company, a corporation*—three cases—Nos. 13,555, 13,097 and 13,099; suits in ejectment to recover possession of five parcels of land on the northerly line of Channel Street, between Fifth and Sixth streets.

4. *People of the State of California, ex rel Board of State Harbor Commissioners vs. Gray Bros. Crushed Rock Company, a corporation, and The Aetna Indemnity Company of Hartford, Conn.* On October 28, 1913, judgment was rendered in the superior court in favor of the

Board and against the said defendants. The Aetna Indemnity Company is insolvent. On November 17, 1913, a claim on the judgment was presented to the receiver in insolvency at Hartford, Conn., supplemental to the claim that was presented prior to the judgment. No dividend has yet been declared by the receiver.

5. *People of the State of California, ex rel Board of State Harbor Commissioners vs. 145 defendants*, being owners of individual parcels of land constituting property north of India Basin and extending to Islais Creek.

There is pending in the Supreme Court of the State of California the action brought by *W. A. Brown* against the *Board of State Harbor Commissioners*. This was a mandamus proceeding brought by Brown, a wharfinger who was removed by the Board, to compel the Board to restore him to office. Judgment was rendered by Judge Seawell in favor of the Board, from which judgment Brown has appealed.

Respectfully submitted.

DANIEL A. RYAN.

PART V.

REPORT OF SUPERINTENDENT OF
BELT RAILROAD.

Report of Superintendent of Belt Railroad.

SAN FRANCISCO, CALIFORNIA, October 8, 1914.

*To the Honorable, the Board of State Harbor Commissioners,
Union Depot and Ferry House, San Francisco.*

GENTLEMEN: I herewith submit the biennial report of the operation of the belt railroad for the fiscal years beginning July 1, 1912 and ending June 30, 1914.

Operation. For the past year we have continuously operated with six train crews, but during the fall months, it has been necessary to increase the number of crews to ten.

Two new standard switch engines have been purchased in the last two years. The business has increased both in volume and weight, so that engines 2 and 3 can not handle the trains in an efficient manner. I recommend that locomotives 2 and 3 be sold and two new, heavier, locomotives be purchased. There are 7 locomotives, and all are in daily service at present; belt railroad employees maintaining and repairing all equipment. Equipment is in good serviceable condition. The belt railroad is operated night and day, and every day in the year, crews working eight-hour shifts. Business is increasing and extending westward so rapidly that when the new car ferry slips at Powell Street are in operation it will be necessary to have more yard room to operate the new slips, and handle trains to and from the transport docks and fair grounds.

I recommend that the blocks of land west of Taylor street and north of Jefferson Street be reserved for belt railroad tracks, as they are the only available lots west of Powell Street suitable for yard room.

Construction. The belt railroad has been extended south to a connection with the southern division, and as far north as Hyde Street. There has been 33,082 feet of new track constructed; 31 nine-inch girder rail turnouts; 9 sixty-pound tee rail turnouts, and 3 nine-inch girder rail crossings, but this does not relieve the congestion of cars very much during the busy season. Tracks have been laid on piers 17, 25, 26, 27, 28, 30, 32, 39, 41 and 46. Main line extended south from Broadway Street to pier 46, and west from Powell to Hyde Street.

A car storage yard has been constructed on seawall lot No. 20. A new terminal yard for the Western Pacific Railroad on lots No. 22 and

No. 7. The Santa Fe yard on lots No. 5 and No. 6 has been reconstructed. New switching tracks have been laid on lots No. 1 and No. 2. A new 5-stall reinforced concrete engine house containing repair pits, machine shop, blacksmith and boiler shop, storeroom, drop pit and office, and a 20,000-gallon water tank have been constructed for the belt railroad. Four cars have been reconstructed, and are as good as new.

Recommendations. Owing to the steady increase of business, and demands of local industries along the San Francisco Bay shore for economical and expeditious transportation, I recommend that the belt railroad be extended north to the United States Government Presidio Reservation, and for the present, as far south as Islais Creek. There are no facilities on the entire length of the belt railroad for handling heavy packages such as machinery, marble, steel building material, and crushed rock. I believe a suitable revolving locomotive crane owned and controlled by the belt railroad would be profitable to the belt railroad, and very serviceable to its patrons.

Respectfully submitted.

F. A. STEVENS.

PART VI.

REPORT OF THE SECRETARY.

REPORT OF THE SECRETARY.

SAN FRANCISCO, July 2, 1914.

To the honorable, the Board of State Harbor Commissioners.

GENTLEMEN: There is respectfully submitted to you herewith the report of my office for the biennium commencing July 1, 1912, and ending June 30, 1914.

The following summary of receipts compares the two biennial periods, 1912-1914 and 1910-1912:

Receipts, 1912-1914, including \$5,796.77 drafts returned and cancelled,	\$2,974,837 62
Receipts, 1910-1912, including \$10,019.30 drafts returned and cancelled,	2,639,740 71

an increase in favor of the last biennial period of-----	\$335,096 91
--	--------------

Your attention is respectfully directed to the increased revenue derived from dockage, tolls, wharfage and rents.

The increase in the item of rents was due principally to the completion and putting into operation of the various new wharves and piers constructed by your honorable body.

The earnings of the belt railroad have, in previous reports, been included in the miscellaneous receipts. In the present instance they have been set forth separately showing the earnings of the two divisions. A comparative statement of the receipts of the belt railroad for the two biennial terms, follows:

Receipts, 1912-1914 -----	\$381,539 50
Receipts, 1910-1912 -----	165,630 00

A gain of-----	\$215,909 50
or 130.03 per cent.	

These gains indicate the healthy growth of the business of the port.

The total number of tons of freight handled over the state wharves during the biennial period 1910-1912, amounted to 13,427,848 tons, and for the biennial period 1912-1914, 14,782,861 tons, an increase of 1,355,013 tons, or 10.09 per cent. For the preceding biennial period the gain over its predecessor was 1.7 per cent.

I express below, in tabular form, the number of vessels docking at the state wharves during the last two biennial periods, together with the tons of freight discharged and loaded over the state wharves during the twenty years, from 1894 to 1914.

Respectfully submitted.

LEO V. MERLE, JR.,

Secretary.

Extra to lightship-----	25 00	25 00	25 00	25 00	25 00	25 00	25 00

Oakland creek to sea direct pays Oakland creek towage and sea towage, less \$5.
Port Costa to sea direct pays Port Costa towage and sea towage, less \$10.

Pilot Charges at San Francisco.

(The State Board of Harbor Commissioners has no jurisdiction over pilot charges, which are fixed by act of legislature, Political Code, article VI, par. 2466.)

All vessels under 500 net tons ----\$3 per foot draft.

All vessels over 500 net tons -----\$3 per foot draft and 3 cents for every ton.

These rates are compulsory and must be paid by every vessel spoken, inward or outward bound, except vessels under enrollment and licensed and engaged in the coasting trade between San Francisco and other United States ports, and vessels engaged in the whaling and fishing trades, which shall be exempt from all pilotage unless a pilot is actually employed. In all cases where inward-bound vessels are not spoken until inside the bar, the rates are reduced one half.

REPORT OF BOARD OF STATE HARBOR COMMISSIONERS.
